Welcome

Amazon Connect Service

- Amazon Connect actions
- Amazon Connect data types

Amazon Connect is a cloud-based contact center solution that you use to set up and manage a customer contact center and provide reliable customer engagement at any scale.

Amazon Connect provides metrics and real-time reporting that enable you to optimize contact routing. You can also resolve customer issues more efficiently by getting customers in touch with the appropriate agents.

There are limits to the number of Amazon Connect resources that you can create. There are also limits to the number of requests that you can make per second. For more information, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

You can use an endpoint to connect programmatically to an AWS service. For a list of Amazon Connect endpoints, see Amazon Connect Endpoints.

Amazon AppIntegrations Service

- Amazon AppIntegrations actions
- Amazon AppIntegrations data types

The Amazon AppIntegrations service enables you to configure and reuse connections to external applications.

For information about how you can use external applications with Amazon Connect, see the following topics in the *Amazon Connect Administrator Guide*:

- Third-party applications (3p apps) in the agent workspace
- Use Amazon Q in Connect for generative AI–powered agent assistance in real-time

Amazon Connect Contact Lens

- Contact Lens actions
- Contact Lens data types

Amazon Connect Contact Lens enables you to analyze conversations between customer and agents, by using speech transcription, natural language processing, and intelligent search capabilities. It performs sentiment analysis, detects issues, and enables you to automatically categorize contacts.

Amazon Connect Contact Lens provides both real-time and post-call analytics of customer-agent conversations. For more information, see Analyze conversations using speech analytics in the *Amazon Connect Administrator Guide*.

Amazon Connect Outbound Campaigns

- Outbound campaigns actions
- Outbound campaigns data types

With the outbound campaigns feature of Amazon Connect, you can create high-volume outbound campaigns. For example, you can use this feature for appointment reminders, telemarketing, subscription renewals, or debt collection. For more information, see Set up outbound communications in the *Amazon Connect Administrator Guide*.

> **Note**
>
> Outbound campaigns version 1 APIs are not supported in the af-south-1 Africa (Cape Town) region. You can use the Outbound campaigns version 2 API actions and data types in this region.

Amazon Connect Outbound Campaigns V2

- Outbound campaignsV2 actions
- Outbound campaignsV2 data types

With the outbound campaignsV2 feature of Amazon Connect, you can create high-volume outbound campaigns. For example, you can use this feature for appointment reminders, telemarketing, subscription renewals, or debt collection. For more information, see Set up outbound communications in the *Amazon Connect Administrator Guide*.

Amazon Connect Cases

- Cases actions
- Cases data types

With Amazon Connect Cases, your agents can track and manage customer issues that require multiple interactions, follow-up tasks, and teams in your contact center. A case represents a customer issue. It records the issue, the steps and interactions taken to resolve the issue, and the outcome. For more information, see Amazon Connect Cases in the *Amazon Connect Administrator Guide*.

Amazon Connect Participant Service

- Participant Service actions
- Participant Service data types

Amazon Connect is an easy-to-use omnichannel cloud contact center service that enables companies of any size to deliver superior customer service at a lower cost. Amazon Connect communications capabilities make it easy for companies to deliver personalized interactions across communication channels, including chat.

Use the Amazon Connect Participant Service to manage participants (for example, agents, customers, and managers listening in), and to send messages and events within a chat contact. The APIs in the service enable the following: sending chat messages, attachment sharing, managing a participant's connection state and message events, and retrieving chat transcripts.

Amazon Connect Customer Profiles

- Customer Profiles actions
- Customer Profiles data types

Amazon Connect Customer Profiles is a unified customer profile for your contact center that has pre-built connectors powered by AppFlow that make it easy to combine customer information from third party applications, such as Salesforce (CRM), ServiceNow (ITSM), and your enterprise resource planning (ERP), with contact history from your Amazon Connect contact center.

For more information about the Amazon Connect Customer Profiles feature, see Use Customer Profiles in the *Amazon Connect Administrator's Guide*.

Amazon Q Connect

- Amazon Q actions
- Amazon Q data types

> **Note**
>
> **Powered by Amazon Bedrock**: AWS implements automated abuse detection. Because Amazon Q in Connect is built on Amazon Bedrock, users can take full advantage of the controls implemented in Amazon Bedrock to enforce safety, security, and the responsible use of artificial intelligence (AI).

Amazon Q in Connect is a generative AI customer service assistant. It is an LLM-enhanced evolution of Amazon Connect Wisdom that delivers real-time recommendations to help contact center agents resolve customer issues quickly and accurately.

Amazon Q in Connect automatically detects customer intent during calls and chats using conversational analytics and natural language understanding (NLU). It then provides agents with immediate, real-time generative responses and suggested actions, and links to relevant documents and articles. Agents can also query Amazon Q in Connect directly using natural language or keywords to answer customer requests.

Use the Amazon Q in Connect APIs to create an assistant and a knowledge base, for example, or manage content by uploading custom files.

For more information, see Use Amazon Q in Connect for generative AI powered agent assistance in real-time in the *Amazon Connect Administrator Guide*.

Amazon Voice ID

Important

End of support notice: On May 20, 2026, AWS will end support for Amazon Connect Voice ID. After May 20, 2026, you will no longer be able to access Voice ID on the Amazon Connect console, access Voice ID features on the Amazon Connect admin website or Contact Control Panel, or access Voice ID resources. For more information, visit Amazon Connect Voice ID end of support.

- Voice ID actions
- Voice ID data types

Amazon Connect Voice ID provides real-time caller authentication and fraud risk detection, which make voice interactions in contact centers more secure and efficient.

For more information about the Voice ID feature, see Use real-time caller authentication with Voice ID in the *Amazon Connect Administrator Guide*.

Programming with the Amazon Connect APIs

The following sections provide additional information about using the Amazon Connect service APIs.

Contents

- Best practices for using Amazon Connect APIs
- Working with Attachments
- Best practices for using PutDialRequestBatch for outbound campaign calling
- Amazon Connect eventual consistency
- Resource integrations

Best practices for using Amazon Connect APIs

This topic provides guidance for using Amazon Connect Describe and List APIs so you don't get unexpected 4xx errors for the response. It also explains how to configure your client Read APIs.

Contents

- Types of errors
- Throttling in Amazon Connect APIs
- How to configure your client Read API(s)
- How to make 2 TPS work for List APIs when you have a large number of resources
- How to make 2 TPS work for Create/Update APIs when you have a large number of resources
- Hitting a resource quota? Delete unused / stale resources
- How to request an increase to an API throttling quota
- Supported SDKs for all Amazon Connect APIs

Types of errors

The Amazon Connect APIs provide an HTTP interface. HTTP defines ranges of HTTP Status Codes for different types of error responses.

- Client errors are indicated by HTTP Status Code class of 4xx

- Service errors are indicated by HTTP Status Code class of 5xx

In this reference guide, the documentation for each API has an **Errors** section that includes a brief discussion about HTTP status codes. We recommend looking there as part of your investigation when you get an error.

For information about the common errors returned by Amazon Connect public APIs, see Common Errors.

Throttling in Amazon Connect APIs

Throttling errors in Amazon Connect public API(s) are defined by HTTP status code 429. This HTTP status code can be retried by the client based on their requirement.

> **Important**
>
> The throttling limits are defined for each API separately at the AWS account level, not for the individual Amazon Connect instance.

To use any API for Amazon Connect resources (such as users, queues, and routing profiles), you need the ID/ARN for the Amazon Connect instance.

By default, Amazon Connect limits the steady-state requests per second (RPS) across all APIs within an AWS account, per Region. It also limits the burst (that is, the maximum bucket size) across all APIs within an AWS account, per Region.

In Amazon Connect the burst limit represents the target maximum number of concurrent request submissions that APIs will fulfill before returning *429 Too Many Requests* error responses.

For more information about throttling quotas, see Amazon Connect throttling quotas.

How to configure your client Read API(s)

Your client configuration will vary based on number of resources that your API tries to describe/list per second.

In the following Java example, the number of retries is set to 3. This means after your Amazon Connect client implementation experiences throttling, it retries for maximum of 3 times. Instead

of retrying immediately and aggressively, the following snippet waits a specified amount of time (between 0 to max of 5 seconds as defined by maxBackoffTime parameter) between tries and uses EqualJitterBackoffStrategy.

```
final class ClientBuilder {

    private static final int NUMBER_OF_RETRIES = 3;

    private static final RetryPolicy RETRY_POLICY =
            RetryPolicy.builder()
                    .numRetries(NUMBER_OF_RETRIES)
                    .retryCondition(RetryCondition.defaultRetryCondition())
                    .backoffStrategy(EqualJitterBackoffStrategy.builder()
                            .baseDelay(Duration.ofSeconds(1))
                            .maxBackoffTime(Duration.ofSeconds(5))
                            .build())
                    .build();

    public static ConnectClient getClient() {
        return ConnectClient.builder()
                .httpClient(LambdaWrapper.HTTP_CLIENT)

 .overrideConfiguration(ClientOverrideConfiguration.builder().retryPolicy(RETRY_POLICY).build()
                .build();
    }
}
```

When failures are caused by overload or contention, backing off often doesn't help as much as it seems like it should. This is because there's a correlation between failures and backing off/contention:

- If all the failed calls back off to the same time, they cause contention or overload again when they are retried.

To address this, we recommend adding jitter. Jitter adds some amount of randomness to the backoff which spreads the retries around in time. For more information about how much jitter to add and the best ways to add it, see this AWS blog post: Exponential Backoff and Jitter.

For information about types of backoff strategies, see Interface BackoffStrategy.

How to make 2 TPS work for List APIs when you have a large number of resources

There are two options: use List APIs with `maxResults` = 1,000, or use Search APIs as an alternative to List/Describe round trips. Both options are discussed here.

The List API of a particular Amazon Connect resource supports a `maxResults` parameter as part of request body. List API(s) support a maximum of 1,000 results in single API call unless specified otherwise in the documentation.

The following example shows the `maxResults` of the ListUsers API.

```
String nextToken = null;
do {
    ListUsersRequest listUsersRequest = ListUsersRequest.builder()
            .instanceId(your Amazon Connect instanceId)
            .maxResults(1000)
            .nextToken(nextToken)
            .build();
    ListUsersResponse response = client.listUsers(listUsersRequest);
    System.out.println(response.sdkHttpResponse().statusCode());
} while (nextToken != null);
```

If `nextToken` is returned, then more results are available. The value of `nextToken` is a unique pagination token for each page. Make the call again using the returned token to retrieve the next page. Keep all other arguments unchanged. Each pagination token expires after 24 hours. Using an expired pagination token will return an HTTP 400 `InvalidToken` error.

When to use Search APIs instead of List APIs

We recommend you assess the speed of pulling details for 100 records at a time (the Search API limit) instead of pulling 1,000 IDs and doing Describe round trips. It's better to try using Search APIs instead of combination of List and Describe API for a specific resource.

Let's say you have a situation where you're listing specific resources in your Amazon Connect instance and then call a Describe API on an individual resource. Instead, we recommend leveraging the Search API for that corresponding resource. Search APIs support several filters that can help to reduce response set as per requirement.

How to make 2 TPS work for Create/Update APIs when you have a large number of resources

There is a performance impact behind creating/updating resources at a default 2 TPS. For example, 100 resources can be created/updated with 2 TPS within 50 seconds. A 1,000 resources with this TPS would need nearly 8 minutes. Based on your use case, if the operation is impacting performance, contact Support and provide a business justification for your request to increase your throttling quota. See How to request an increase to an API throttling quota.

It is your responsibility to always implement the following best practices:

- Check your logic and implement best practices to make your requests as efficient as possible. Check out AWS Well-Architected Tool (AWS WA Tool) for processes that help measure your architecture using AWS best practices.
- Test your requests and any custom processes *before adding them to production operations*.

Hitting a resource quota? Delete unused / stale resources

If you keep hitting the quota limit for a specific resource, we recommend deleting any unused or stale resources. You can find the Delete API for a resource on the resource-specific Action pages. These pages list all the APIs for a given resource.

How to request an increase to an API throttling quota

Important

- We analyze all requests for quota increases and provide guidance for all queries.
- We rarely approve requests if they apply to situations other than those listed below.
- For smaller increase requests, we can approve in hours. Larger increase requests take time to review, process, approve, and deploy. Depending on your specific implementation, your resource, and the size of quota that you want, a request can take up to 3 weeks. An extra-large worldwide increase can potentially take months. If you're increasing your quotas as part of a larger project, keep this information in mind and plan accordingly.

For instructions about how to use the Service Quotas console, see Using the AWS Management Console to request an increase.

In the Services Quotas console, open an Support case and provide the following information:

1. Have you implemented the best practices explained in the Retry behavior topic of the *AWS SDKs and Tools Reference Guide*?
2. What is the performance impact without the requested limit increase? Provide some calculations.
3. What is the expected number of resources customer is trying to create/update/describe every second with the APIs?
4. What is the new quota for the API that you want?

Include in your case if the following situation(s) apply:

- It is a migration request and you need high TPS for a specific time range to configure your instance(s).
- There are performance or business impacting usecases, such as handling huge call volume for peak season.
- You have thousands of resources with multiple concurrent agents working at the same time which might increase the overall traffic from your contact center.

Supported SDKs for all Amazon Connect APIs

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3

Working with Attachments

This topic explains how to work with attachments for Chat and Cases in Amazon Connect. For Chat Attachments, refer to the first section on the Amazon Connect Participant Service API. For Case Attachments, refer to the second section on the Amazon Connect service's Attached Files APIs.

Uploading Attachments with the Participant Service

There are three basic steps for uploading a file using the Amazon Connect Participant Service API.

1. HTTP POST file metadata to `StartAttachmentUpload` API, which will provide a signed Amazon S3 URL and attachment ID for uploading the file directly to Amazon S3.
2. HTTP PUT file data to the signed Amazon S3 URL.
3. HTTP POST attachment ID to `CompleteAttachmentUpload` to finalize the upload to Amazon S3.

Below is a basic JavaScript implementation for reference purposes.

```
//Define the html element for file using input tag

<input type="file" id="fileUpload">
<input type="button" id="btnUploadFile" onclick="uploadFile()" value="Upload file">

async function uploadFile() {
    //Initiate the file upload by calling StartAttachmentUpload, providing the name,
 size, and content type of the file you want to upload.
    //The response will include a pre-signed URL and headers to use when building the
 file upload request, as well as an AttachmentId.
    const files = document.getElementById('fileUpload').files;
    const file = files[0];

    const startUploadRequest = {
        AttachmentName: file.name,
        AttachmentSizeInBytes: file.size,
        ContentType: file.type
    };
    const { AttachmentId, UploadMetadata } = await
 startAttachmentUpload(startUploadRequest);

    //Send the file data to the pre-signed S3 URL.
```

```
    //The file is stored in a temporary location in the S3 bucket.

    await uploadFileToS3(file, UploadMetadata.Url, UploadMetadata.HeadersToInclude);

    //Finalize the file upload by calling CompleteAttachmentUpload, providing the
 AttachmentId.
    //This moves the file to the final Attachments S3 path configured for the connect
 instance.
    const completeUploadRequest = {
        AttachmentIds: [ AttachmentId ]
    };
    await completeAttachmentUpload(completeUploadRequest);
}

async function startAttachmentUpload(requestData){
    const response = await fetch(StartAttachmentUploadEndpoint, {
        method: 'POST',
        headers: {
            'Content-Type': 'application/json'
            'X-Amz-Bearer': ConnectionToken,
        },
        body: JSON.stringify(requestData)
    });

    return response.data;
}

async function uploadFileToS3(file, signedUrl, headersToInclude) {
    return fetch(signedUrl, {
      method: 'PUT',
      headers: headersToInclude,
      body: file
    });
}

async function completeAttachmentUpload(requestData){
    return fetch(CompleteAttachmentUploadEndpoint, {
        method: 'POST',
        headers: {
            'Content-Type': 'application/json'
            'X-Amz-Bearer': ConnectionToken,
        },
        body: JSON.stringify(requestData)
    });
```

```
}
```

For an example of a real world implementation, view the Amazon Connect ChatJS JavaScript client on GitHub.

Uploading Attached Files with the Connect Service

The same basic steps follow from the Participant service instructions, for usage with the Amazon Connect service's attached file APIs.

1. Call the `StartAttachedFileUpload` API with the required attached file information, which will provide a signed Amazon S3 URL, headers, and file ID for uploading the file directly to Amazon S3.

   - If you are attaching a file to a Case, the calling identity must also have the `cases:CreateRelatedItem` permission on the target Case resource.
2. Using your http client of choice, PUT file data to the signed Amazon S3 URL, ensuring that you add the headers as required from the response of Step 1.
3. Call the `CompleteAttachedFileUpload` to finalize the upload to Amazon S3.

Best practices for using PutDialRequestBatch for outbound campaign calling

This topic provides guidance and best practices for using the PutDialRequestBatch API for outbound campaign calling. PutDialRequestBatch takes in a list of DialRequest to be dialed as part of an outbound campaign.

- Before using PutDialRequestBatch, always use the StartCampaign API to start the outbound campaign.
- In DialRequest, set `expirationTime`—the timestamp when a dial request expires—to a future time, preferably a few minutes in the future to allow the outbound campaigns dialer algorithm to attempt to dial.

  Note the following failure codes:

  - `InvalidInput`: There's a request input mismatch with the parameters defined in DialRequest. Fix the request input and try again.

- `RequestThrottled`: There aren't enough agents or telecom capacity available. The service maintains an upper limit on the number of records it can accept. When this limit is reached, the service returns a `RequestThrottled` message. This is a signal for you to stop sending more records and instead wait before attempting to retry, allowing the service to process and clear some records so it has room to accept more.
- `UnknownError`: There is an internal failure in outbound campaigns. Please try again.

Recommendations for tracking contact dispositions

A contact disposition is a type of state for a contact. It is either assigned by an agent from a pre-defined list that you provide (for example, **Sold**, **Wrong person**, **Right person, didn't sell**) or assigned by Amazon Connect for a contact (for example, `EXPIRED`, `CONTACT_FLOW_DISCONNECT`, or `TELECOM_PROBLEM`). For outbound campaigns, the contact disposition is assigned by Amazon Connect.

You can use Amazon Connect contact records or contact events to track the contact dispositions for outbound campaigns. The key attribute to track contact disposition is DisconnectReason, which indicates how the voice contact was terminated.

Disconnect reasons can be grouped into the following 3 categories:

- **Success**: A contact is successfully dialed out. Values: `CUSTOMER_DISCONNECT | AGENT_DISCONNECT | THIRD_PARTY_DISCONNECT | BARGED | CONTACT_FLOW_DISCONNECT | OTHER`
- **Expired**: This is expected behavior of the dialing algorithm. When the dialing algorithm determines insufficient dialing capacity (for example, because all agents are occupied or all telecom capacity is being used) during the duration set by the `expirationTime` parameter, Amazon Connect does not attempt to call such endpoints. In other words, those endpoints are expired. If you need higher throughput, you can submit a request for higher dialing capacity. Values: `EXPIRED`
- **Failed**: Outbound campaigns failed a dial attempt because there are specific systematic errors. Values: `OUTBOUND_DESTINATION_ENDPOINT_ERROR | OUTBOUND_RESOURCE_ERROR | OUTBOUND_ATTEMPT_FAILED | TELECOM_PROBLEM`

For a description of each of these values, see DisconnectReason in the Contact records data model topic in the *Amazon Connect Administrator Guide*.

If the disconnect reason is expired or failed type, take one of the following next steps:

Disconnect reason value	Recommendation
EXPIRED	We recommend that you use PutDialRequestBatch to create a new contact for this destination with a different client token.
OUTBOUND_DESTINATION_ENDPOINT_ERROR	Check whether the current configuration of your Amazon Connect instance allows this destination to be dialed. For more information, see Countries you can call by default.
OUTBOUND_RESOURCE_ERROR	• Check whether your Amazon Connect instance allows outbound calls. For more information, see Enable outbound calls. • Check that the following resources exist: queue, flow, Amazon Connect source phone number, and campaign. • After fixing the configuration of the instance, use PutDialRequestBatch to create a new contact for this destination with a different client token.
OUTBOUND_ATTEMPT_FAILED	There is an unidentified error. We recommend that you use PutDialRequestBatch to create a new contact for this destination with a different client token.
TELECOM_PROBLEM	Disconnected due to an issue with connecting the call from the carrier, network congestion, network error, etc. We recommend that you use PutDialRequestBatch to create a new contact for this destination with a different client token.

Amazon Connect eventual consistency

The Amazon Connect API follows an eventual consistency model due to the distributed nature of the system. As a result, changes to Amazon Connect resources might not be immediately visible to the subsequent commands you run.

When you perform Amazon Connect API calls, there might be a brief delay before the change is available throughout Amazon Connect. It typically takes less than a few seconds for the change to propagate throughout the system, but in some cases it can take several minutes. You might get unexpected errors, such as a `ResourceNotFoundException` or an `InvalidRequestException`, during this time. For example, Amazon Connect might return a `ResourceNotFoundException` if you call DescribeUser immediately after calling CreateUser.

We recommend that you configure a retry strategy on your Amazon Connect clients to automatically retry operations after a brief waiting period. For more information, see Retry behavior in the *AWS SDKs and Tools Reference Guide*.

Resource integrations

CloudFormation

Amazon Connect is integrated with CloudFormation, a service that allows you to treat infrastructure as code. Use CloudFormation to model, provision, and manage AWS and third-party resources.

The following Amazon Connect resource APIs support CloudFormation templates:

- AWS::Connect::ApprovedOrigin
- AWS::Connect::ContactFlow
- AWS::Connect::ContactFlowModule
- AWS::Connect::EvaluationForm
- AWS::Connect::HoursOfOperation
- AWS::Connect::Instance
- AWS::Connect::InstanceStorageConfig
- AWS::Connect::IntegrationAssociation
- AWS::Connect::PhoneNumber
- AWS::Connect::Prompt
- AWS::Connect::Queue
- AWS::Connect::QuickConnect
- AWS::Connect::RoutingProfile
- AWS::Connect::Rule

- AWS::Connect::SecurityKey
- AWS::Connect::TaskTemplate
- AWS::Connect::TrafficDistributionGroup
- AWS::Connect::User
- AWS::Connect::UserHierarchyGroup
- AWS::Connect::View
- AWS::Connect::ViewVersion

CloudTrail

Amazon Connect is integrated with AWS CloudTrail, a service that provides a record of the Amazon Connect API calls that a user, role, or AWS service makes. CloudTrail captures Amazon Connect API calls as events. All public Amazon Connect APIs support CloudTrail.

For more information, see Logging Amazon Connect API calls with AWS CloudTrail.

EventBridge

Amazon Connect is integrated with Amazon EventBridge, a service that provides a record of the Amazon Connect API calls that a user, role, or AWS service makes. All public Amazon Connect APIs support EventBridge, with events published to CloudTrail consumable in EventBridge.

Some Amazon Connect resources are integrated directly into EventBridge. For more information, see EventBridge events emitted by Amazon Connect.

Amazon Connect actions by resource

The following section lists the Amazon Connect API actions by resource.

- Analytics data lake actions
- Agent status actions
- Chat actions
- Contacts actions
- Data table actions
- Email actions
- Evaluation actions
- Files actions
- Flows / Flow module actions
- Hierarchy group actions
- Hours of operation actions
- Instance actions
- Integration association actions
- Metrics actions
- Notifications actions
- Phone number actions
- Prompt actions
- Queue actions
- Quick connect actions
- Routing profile actions
- Rules actions
- Security profile actions
- Tag actions
- Task actions
- Traffic distribution group actions
- Use cases actions

- User management actions
- View actions
- Vocabulary actions
- Voice actions
- Workspace actions

Analytics data lake actions

These APIs are in preview release for Amazon Connect and are subject to change.

The following API actions are available for analytics datasets:

- AssociateAnalyticsDataSet
- BatchAssociateAnalyticsDataSet
- BatchDisassociateAnalyticsDataSet
- DisassociateAnalyticsDataSet
- ListAnalyticsDataAssociations

Agent status actions

The following API actions are available for agent status:

- CreateAgentStatus
- DescribeAgentStatus
- ListAgentStatuses
- PutUserStatus
- SearchAgentStatuses
- UpdateAgentStatus

> **Note**
>
> Agent status ARNs cannot be deleted but can be renamed or disabled if needed.

For more information about agent status, see About agent status in the *Amazon Connect Administrator Guide*.

Chat actions

The following API actions are available for chats:

- CreatePersistentContactAssociation
- SendChatIntegrationEvent
- StartChatContact

For more information about chat, see Concepts: Web and mobile chat capabilities in Amazon Connect in the *Amazon Connect Administrator Guide*.

Contacts actions

The following API actions are available for contacts:

- AssociateContactWithUser
- BatchPutContact
- CreateContact
- CreateParticipant
- CreatePushNotificationRegistration
- DeletePushNotificationRegistration
- DescribeContact
- DismissUserContact
- GetContactAttributes
- ListAssociatedContacts
- ListContactReferences
- ListRealtimeContactAnalysisSegments
- ListRealtimeContactAnalysisSegmentsV2
- MonitorContact
- SearchContacts

- StartContactStreaming
- StartOutboundChatContact
- StartOutboundVoiceContact
- StartScreenSharing
- StartTaskContact
- StartWebRTCContact
- StopContactStreaming
- StopContact
- TagContact
- TransferContact
- UntagContact
- UpdateContact
- UpdateContactAttributes
- UpdateContactRoutingData
- UpdateContactSchedule

For more information about contacts, see the following topics in the *Amazon Connect Administrator Guide*:

- Amazon Connect contact events
- Contact records data model
- Capture customer audio: live media streaming
- Customize chat flow experiences by integrating custom participants

Data table actions

The following API actions are available for data tables:

- BatchCreateDataTableValue
- BatchDeleteDataTableValue
- BatchDescribeDataTableValue
- BatchUpdateDataTableValue

- CreateDataTable
- CreateDataTableAttribute
- DeleteDataTable
- DeleteDataTableAttribute
- DescribeDataTable
- DescribeDataTableAttribute
- EvaluateDataTableValues
- ListDataTableAttributes
- ListDataTablePrimaryValues
- ListDataTables
- ListDataTableValues
- SearchDataTables
- UpdateDataTableAttribute
- UpdateDataTableMetadata
- UpdateDataTablePrimaryValues

For more information about data tables, see Data tables in the *Amazon Connect Administrator Guide*.

Email actions

The following API actions are available for email:

- AssociateEmailAddressAlias
- CreateEmailAddress
- DeleteEmailAddress
- DescribeEmailAddress
- DisassociateEmailAddressAlias
- SearchEmailAddresses
- SendOutboundEmail
- StartEmailContact

- StartOutboundEmailContact
- UpdateEmailAddressMetadata
- UpdateQueueOutboundEmailConfig

For more information about email, see Set up email in Amazon Connect in the *Amazon Connect Administrator Guide*.

Evaluation actions

The following API actions are available for evaluations:

- ActivateEvaluationForm
- CreateEvaluationForm
- DeactivateEvaluationForm
- DeleteContactEvaluation
- DescribeContactEvaluation
- DeleteEvaluationForm
- DescribeEvaluationForm
- ListContactEvaluations
- ListEvaluationForms
- ListEvaluationFormVersions
- StartContactEvaluation
- SubmitContactEvaluation
- UpdateContactEvaluation
- UpdateEvaluationForm

To create a CloudFormation template for evaluation forms, see the following topic:

- AWS::Connect::EvaluationForm resource in the *CloudFormation User Guide*

For more information about evaluations, see Evaluate agent performance in the *Amazon Connect Administrator Guide*.

Files actions

The following API actions are available for Files:

- StartAttachedFileUpload
- CompleteAttachedFileUpload
- GetAttachedFile
- BatchGetAttachedFileMetadata
- DeleteAttachedFile

For more information about attached files, see Enable attachments to share files using chat and upload files to cases in the *Amazon Connect Administrator Guide*.

Flows / Flow module actions

The following API actions are available for flows and flow modules:

- AssociateFlow
- BatchGetFlowAssociation
- CreateContactFlow
- CreateContactFlowModule
- CreateContactFlowVersion
- DeleteContactFlow
- DeleteContactFlowModule
- DescribeContactFlow
- DescribeContactFlowModule
- DisassociateFlow
- GetFlowAssociation
- ListContactFlows
- ListContactFlowModules
- ListContactFlowVersions
- ListFlowAssociations
- SearchContactFlows

- SearchContactFlowModules
- UpdateContactFlowContent
- UpdateContactFlowMetadata
- UpdateContactFlowModuleContent
- UpdateContactFlowModuleMetadata
- UpdateContactFlowName

To create a CloudFormation template for flows, see the following topics:

- AWS::Connect::ContactFlow
- AWS::Connect::ContactFlowModule

Use the Flow language to programmatically write flows rather than drag blocks onto the flow designer.

For more information about flows, see Create Amazon Connect flows in the *Amazon Connect Administrator Guide*.

Hierarchy group actions

The following API actions are available for hierarchy groups:

- CreateUserHierarchyGroup
- DeleteUserHierarchyGroup
- DescribeUserHierarchyGroup
- DescribeUserHierarchyStructure
- ListUserHierarchyGroups
- SearchUserHierarchyGroups
- UpdateUserHierarchy
- UpdateUserHierarchyGroupName
- UpdateUserHierarchyStructure

To create a CloudFormation template for hierarchy groups, see the following topic:

- AWS::Connect::UserHierarchyGroup

For more information about managing users, see Manage users in Amazon Connect in the *Amazon Connect Administrator Guide*.

For more information about agent hierarchies, see Set up agent hierarchies in the *Amazon Connect Administrator Guide*.

Hours of operation actions

The following API actions are available for managing hours of operation:

- CreateHoursOfOperation
- DescribeHoursOfOperation
- DeleteHoursOfOperation
- ListHoursOfOperations
- SearchHoursOfOperations
- UpdateHoursOfOperation
- ListChildHoursOfOperations
- AssociateHoursOfOperations
- DisassociateHoursOfOperations

The following API actions are available for managing hours of operation overrides:

- CreateHoursOfOperationOverride
- DeleteHoursOfOperationOverride
- DescribeHoursOfOperationOverride
- GetEffectiveHoursOfOperations
- ListHoursOfOperationOverrides
- SearchHoursOfOperationOverrides
- UpdateHoursOfOperationOverride

To create a CloudFormation template for hours of operation, see the following topic:

- AWS::Connect::HoursOfOperation

For more information about hours of operation and overrides, see Set the hours of operation and timezone for a queue in the *Amazon Connect Administrator Guide*.

Instance actions

The following API actions are available for instances:

- AssociateApprovedOrigin
- AssociateBot
- AssociateInstanceStorageConfig
- AssociateLambdaFunction
- AssociateLexBot
- AssociateSecurityKey
- CreateInstance
- DeleteInstance
- DescribeInstance
- DescribeInstanceAttribute
- DescribeInstanceStorageConfig
- DisassociateApprovedOrigin
- DisassociateBot
- DisassociateInstanceStorageConfig
- DisassociateLambdaFunction
- DisassociateLexBot
- DisassociateSecurityKey
- GetFederationToken
- ListApprovedOrigins
- ListBots
- ListInstances
- ListInstanceAttributes
- ListInstanceStorageConfigs

- ListLambdaFunctions
- ListLexBots
- ListSecurityKeys
- ReplicateInstance
- UpdateInstanceAttribute
- UpdateInstanceStorageConfig

To create a CloudFormation template for instances, see the following topics:

- AWS::Connect::Instance
- AWS::Connect::InstanceStorageConfig

For more information about instances, see Create an Amazon Connect instance in the *Amazon Connect Administrator Guide*.

Integration association actions

The following API actions are available for integration associations:

- CreateIntegrationAssociation
- DeleteIntegrationAssociation
- ListIntegrationAssociations

To create a CloudFormation template for instance associations, see the following topic:

- AWS::Connect::IntegrationAssociation

For more information about integration associations, see Set up pre-built integrations in the *Amazon Connect Administrator Guide*.

Metrics actions

The following API actions are available for metrics:

- GetContactMetrics

- GetCurrentMetricData
- GetCurrentUserData
- GetMetricData
- GetMetricDataV2

For more information about metrics, see Metrics, dashboards, and reports in Amazon Connect in the *Amazon Connect Administrator Guide*.

Notifications actions

The following API actions are available for notifications:

- CreateNotification
- DeleteNotification
- DescribeNotification
- ListNotifications
- ListUserNotifications
- SearchNotifications
- UpdateNotificationContent
- UpdateUserNotificationStatus

For more information about notifications, see Notifications Amazon Connect in the *Amazon Connect Administrator Guide*.

Phone number actions

The following API actions are available for phone numbers:

- AssociatePhoneNumberContactFlow
- ClaimPhoneNumber
- DescribePhoneNumber
- DisassociatePhoneNumberContactFlow
- ImportPhoneNumber

- ListPhoneNumbers
- ListPhoneNumbersV2
- ReleasePhoneNumber
- SearchAvailablePhoneNumbers
- UpdatePhoneNumber
- UpdatePhoneNumberMetadata

To create a CloudFormation template for phone numbers, see the following topic:

- AWS::Connect::PhoneNumber

For more information about phone numbers, see Set up phone numbers for your contact center in the *Amazon Connect Administrator Guide*.

Predefined attributes actions

The following API actions are available for predefined attributes:

- CreatePredefinedAttribute
- DescribePredefinedAttribute
- ListPredefinedAttributes
- SearchPredefinedAttributes
- UpdatePredefinedAttribute

To create a CloudFormation template for phone numbers, see the following topic:

- AWS::Connect::PredefinedAttribute

For more information about predefined attributes, see Create predefined attributes for routing contacts to agents in the *Amazon Connect Administrator Guide*.

Prompt actions

The following API actions are available for prompts:

- CreatePrompt
- DeletePrompt
- DescribePrompt
- GetPromptFile
- ListPrompts
- SearchPrompts
- UpdatePrompt

To create a CloudFormation template for prompts, see the following topic:

- AWS::Connect::Prompt

For more information about prompts, see Create prompts in the *Amazon Connect Administrator Guide*.

Queue actions

The following API actions are available for queues:

- CreateQueue
- DeleteQueue
- DescribeQueue
- ListQueues
- SearchQueues
- UpdateQueueHoursOfOperation
- UpdateQueueMaxContacts
- UpdateQueueName
- UpdateQueueOutboundCallerConfig
- UpdateQueueStatus

To create a CloudFormation template for queues, see the following topic:

- AWS::Connect::Queue

For more information about queues, see Set up routing in the *Amazon Connect Administrator Guide*.

Quick connect actions

The following API actions are available for quick connects:

- AssociateQueueQuickConnects
- CreateQuickConnect
- DeleteQuickConnect
- DescribeQuickConnect
- DisassociateQueueQuickConnects
- ListQueueQuickConnects
- ListQuickConnects
- SearchQuickConnects
- UpdateQuickConnectConfig
- UpdateQuickConnectName

To create a CloudFormation template for quick connects, see the following topic:

- AWS::Connect::QuickConnect

For more information about quick connects, see Create quick connects in the *Amazon Connect Administrator Guide*.

Routing profile actions

The following API actions are available for routing profiles:

- AssociateRoutingProfileQueues
- CreateRoutingProfile
- DeleteRoutingProfile
- DescribeRoutingProfile
- DisassociateRoutingProfileQueues

- ListRoutingProfileManualAssignmentQueues
- ListRoutingProfiles
- ListRoutingProfileQueues
- SearchRoutingProfiles
- UpdateRoutingProfileConcurrency
- UpdateRoutingProfileDefaultOutboundQueue
- UpdateRoutingProfileName
- UpdateRoutingProfileQueues

To create a CloudFormation template for routing profiles, see the following topic:

- AWS::Connect::RoutingProfile

For more information about routing profiles, see Create a routing profile in the *Amazon Connect Administrator Guide*.

Rules actions

The following API actions are available for rules:

- CreateRule
- DeleteRule
- DescribeRule
- ListRules
- UpdateRule

To create a CloudFormation template for rules, see the following topic:

- AWS::Connect::Rule

Use the Rules Function language to code conditions for the rules.

For more information about Amazon Connect rules, see Create rules and Create rules with Contact Lens in the *Amazon Connect Administrator Guide*.

Security profile actions

The following API actions are available for security profiles:

- CreateSecurityProfile
- DescribeSecurityProfile
- DeleteSecurityProfile
- ListSecurityProfiles
- ListSecurityProfileApplications
- ListSecurityProfilePermissions
- SearchSecurityProfiles
- UpdateSecurityProfile

To create a CloudFormation template for tasks, see the following topic:

- AWS::Connect::SecurityProfile

For more information about security profiles, see Security profiles in the *Amazon Connect Administrator Guide*.

Tag actions

The following API actions are available for tags:

- SearchResourceTags
- TagResource
- ListTagsForResource
- UntagResource

For more information about tags, see Tagging resources in Amazon Connect in the *Amazon Connect Administrator Guide*.

Task actions

The following API actions are available for tasks:

- CreateTaskTemplate
- DeleteTaskTemplate
- GetTaskTemplate
- ListTaskTemplates
- StartTaskContact
- UpdateTaskTemplate

To create a CloudFormation template for tasks, see the following topic:

- AWS::Connect::TaskTemplate

For more information about tasks, see the following topics in the *Amazon Connect Administrator Guide*:

- Tasks
- Set up tasks
- Set up applications for task creation

Traffic distribution group actions

The following API actions are available for traffic distribution groups:

- AssociateTrafficDistributionGroupUser
- CreateTrafficDistributionGroup
- DeleteTrafficDistributionGroup
- DescribeTrafficDistributionGroup
- DisassociateTrafficDistributionGroupUser
- GetTrafficDistribution
- ListTrafficDistributionGroups
- ListTrafficDistributionGroupUsers
- UpdateTrafficDistribution

To create a CloudFormation template for traffic distribution groups, see the following topic:

- AWS::Connect::TrafficDistributionGroup

For more information about traffic distribution groups, see Set up Amazon Connect Global Resiliency in the *Amazon Connect Administrator Guide*.

Use cases actions

The following API actions are available for use cases:

- CreateUseCase
- DeleteUseCase
- ListUseCases

User management actions

The following API actions are available for user management:

- AssociateUserProficiencies
- CreateUser
- DeleteUser
- DescribeUser
- DisassociateUserProficiencies
- ListUsers
- ListUserProficiencies
- PutUserStatus
- SearchUsers
- UpdateUserConfig
- UpdateUserIdentityInfo
- UpdateUserPhoneConfig
- UpdateUserRoutingProfile
- UpdateUserSecurityProfiles

To create a CloudFormation template for users, see the following topic:

- AWS::Connect::User

For more information about managing users, see Manage users in Amazon Connect in the *Amazon Connect Administrator Guide*.

View actions

The following API actions are available for views:

- CreateView
- CreateViewVersion
- DeleteView
- DeleteViewVersion
- DescribeView
- ListViews
- ListViewVersions
- UpdateViewContent
- UpdateViewMetadata
- View
- ViewContent
- ViewInputContent
- ViewSummary
- ViewVersionSummary

To create a CloudFormation template for views, see the following topics:

- AWS::Connect::View
- AWS::Connect::ViewVersion

For more information about views, see the following topic in the *Amazon Connect Administrator Guide*:

- View resource

Vocabulary actions

The following API actions are available for vocabularies:

- AssociateDefaultVocabulary
- CreateVocabulary
- DeleteVocabulary
- DescribeVocabulary
- ListDefaultVocabularies
- SearchVocabularies

For more information about custom vocabularies, see Add custom vocabularies in the *Amazon Connect Administrator Guide*.

Voice actions

The following API actions are available for voice:

- ResumeContactRecording
- StartContactRecording
- StartOutboundVoiceContact
- StopContactRecording
- SuspendContactRecording

For more information, see the following topics in the *Amazon Connect Administrator Guide*:

- Monitor live conversations
- Review recorded conversations

Workspace actions

The following API actions are available for workspaces:

- AssociateWorkspace

- CreateWorkspace
- CreateWorkspacePage
- DeleteWorkspace
- DeleteWorkspaceMedia
- DeleteWorkspacePage
- DescribeWorkspace
- DisassociateWorkspace
- ImportWorkspaceMedia
- ListWorkspaceMedia
- ListWorkspacePages
- ListWorkspaces
- SearchWorkspaceAssociations
- SearchWorkspaces
- UpdateWorkspaceMetadata
- UpdateWorkspacePage
- UpdateWorkspaceTheme
- UpdateWorkspaceVisibility

For more information about workspaces, see Workspaces in the *Amazon Connect Administrator Guide*.

Actions

The following actions are supported by Amazon Connect Service:

- ActivateEvaluationForm
- AssociateAnalyticsDataSet
- AssociateApprovedOrigin
- AssociateBot
- AssociateContactWithUser
- AssociateDefaultVocabulary
- AssociateEmailAddressAlias
- AssociateFlow
- AssociateHoursOfOperations
- AssociateInstanceStorageConfig
- AssociateLambdaFunction
- AssociateLexBot
- AssociatePhoneNumberContactFlow
- AssociateQueueEmailAddresses
- AssociateQueueQuickConnects
- AssociateRoutingProfileQueues
- AssociateSecurityKey
- AssociateSecurityProfiles
- AssociateTrafficDistributionGroupUser
- AssociateUserProficiencies
- AssociateWorkspace
- BatchAssociateAnalyticsDataSet
- BatchCreateDataTableValue
- BatchDeleteDataTableValue
- BatchDescribeDataTableValue
- BatchDisassociateAnalyticsDataSet
- BatchGetAttachedFileMetadata

- BatchGetFlowAssociation
- BatchPutContact
- BatchUpdateDataTableValue
- ClaimPhoneNumber
- CompleteAttachedFileUpload
- CreateAgentStatus
- CreateContact
- CreateContactFlow
- CreateContactFlowModule
- CreateContactFlowModuleAlias
- CreateContactFlowModuleVersion
- CreateContactFlowVersion
- CreateDataTable
- CreateDataTableAttribute
- CreateEmailAddress
- CreateEvaluationForm
- CreateHoursOfOperation
- CreateHoursOfOperationOverride
- CreateInstance
- CreateIntegrationAssociation
- CreateNotification
- CreateParticipant
- CreatePersistentContactAssociation
- CreatePredefinedAttribute
- CreatePrompt
- CreatePushNotificationRegistration
- CreateQueue
- CreateQuickConnect
- CreateRoutingProfile
- CreateRule

- CreateSecurityProfile
- CreateTaskTemplate
- CreateTestCase
- CreateTrafficDistributionGroup
- CreateUseCase
- CreateUser
- CreateUserHierarchyGroup
- CreateView
- CreateViewVersion
- CreateVocabulary
- CreateWorkspace
- CreateWorkspacePage
- DeactivateEvaluationForm
- DeleteAttachedFile
- DeleteContactEvaluation
- DeleteContactFlow
- DeleteContactFlowModule
- DeleteContactFlowModuleAlias
- DeleteContactFlowModuleVersion
- DeleteContactFlowVersion
- DeleteDataTable
- DeleteDataTableAttribute
- DeleteEmailAddress
- DeleteEvaluationForm
- DeleteHoursOfOperation
- DeleteHoursOfOperationOverride
- DeleteInstance
- DeleteIntegrationAssociation
- DeleteNotification
- DeletePredefinedAttribute

- DeletePrompt
- DeletePushNotificationRegistration
- DeleteQueue
- DeleteQuickConnect
- DeleteRoutingProfile
- DeleteRule
- DeleteSecurityProfile
- DeleteTaskTemplate
- DeleteTestCase
- DeleteTrafficDistributionGroup
- DeleteUseCase
- DeleteUser
- DeleteUserHierarchyGroup
- DeleteView
- DeleteViewVersion
- DeleteVocabulary
- DeleteWorkspace
- DeleteWorkspaceMedia
- DeleteWorkspacePage
- DescribeAgentStatus

ActivateEvaluationForm

Service: Amazon Connect Service

Activates an evaluation form in the specified Amazon Connect instance. After the evaluation form is activated, it is available to start new evaluations based on the form.

Request Syntax

```
POST /evaluation-forms/InstanceId/EvaluationFormId/activate HTTP/1.1
Content-type: application/json

{
   "EvaluationFormVersion": number
}
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

The unique identifier for the evaluation form.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EvaluationFormVersion

The version of the evaluation form to activate. If the version property is not provided, the latest version of the evaluation form is activated.

Type: Integer

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationFormArn": "string",
   "EvaluationFormId": "string",
   "EvaluationFormVersion": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormArn

The Amazon Resource Name (ARN) for the evaluation form resource.

Type: String

EvaluationFormId

The unique identifier for the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EvaluationFormVersion

A version of the evaluation form.

Type: Integer

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example activates version 3 of an evaluation form.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormVersion": 3
}
```

Sample Response

```
{
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
   "EvaluationFormVersion": 3
}
```

AssociateAnalyticsDataSet

Service: Amazon Connect Service

Associates the specified dataset for a Amazon Connect instance with the target account. You can associate only one dataset in a single call.

Request Syntax

```
PUT /analytics-data/instance/InstanceId/association HTTP/1.1
Content-type: application/json

{
   "DataSetId": "string",
   "TargetAccountId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

DataSetId

The identifier of the dataset to associate with the target account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

TargetAccountId

The identifier of the target account. Use to associate a dataset to a different account than the one containing the Amazon Connect instance. If not specified, by default this value is the AWS account that has the Amazon Connect instance.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "DataSetId": "string",
   "ResourceShareArn": "string",
   "ResourceShareId": "string",
   "TargetAccountId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataSetId

The identifier of the dataset that was associated.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

ResourceShareArn

The Amazon Resource Name (ARN) of the AWS Resource Access Manager share.

Type: String

ResourceShareId

The AWS Resource Access Manager share ID that is generated.

Type: String

TargetAccountId

The identifier of the target account.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

AssociateApprovedOrigin

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Associates an approved origin to an Amazon Connect instance.

Request Syntax

```
PUT /instance/InstanceId/approved-origin HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Origin": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Origin

The domain to add to your allow list.

Type: String

Length Constraints: Maximum length of 267.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateBot

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Allows the specified Amazon Connect instance to access the specified Amazon Lex or Amazon Lex V2 bot.

Request Syntax

```
PUT /instance/InstanceId/bot HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "LexBot": {
      "LexRegion": "string",
      "Name": "string"
   },
   "LexV2Bot": {
      "AliasArn": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

LexBot

Configuration information of an Amazon Lex bot.

Type: LexBot object

Required: No

LexV2Bot

The Amazon Lex V2 bot to associate with the instance.

Type: LexV2Bot object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateContactWithUser

Service: Amazon Connect Service

Associates a queued contact with an agent.

Use cases

Following are common uses cases for this API:

- Programmatically assign queued contacts to available users.
- Leverage the IAM context key `connect:PreferredUserArn` to restrict contact association to specific preferred user.

Important things to know

- Use this API with chat, email, and task contacts. It does not support voice contacts.
- Use it to associate contacts with users regardless of their current state, including custom states. Ensure your application logic accounts for user availability before making associations.
- It honors the IAM context key `connect:PreferredUserArn` to prevent unauthorized contact associations.
- It respects the IAM context key `connect:PreferredUserArn` to enforce authorization controls and prevent unauthorized contact associations. Verify that your IAM policies are properly configured to support your intended use cases.
- The service quota *Queues per routing profile per instance* applies to manually assigned queues, too. For more information about this quota, see Amazon Connect quotas in the *Amazon Connect Administrator Guide*.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /contacts/InstanceId/ContactId/associate-user HTTP/1.1
Content-type: application/json

{
   "UserId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

UserId

The identifier for the user. This can be the ID or the ARN of the user.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example request to associate a queued contact with a user

Following is an example of associating a queued contact with a user.

```
POST https://connect.us-west-2.amazonaws.com/contacts/{InstanceId}/{ContactId}/
associate-user HTTP/1.1
Content-type: application/json

{
     "UserId": "string"
}
```

Example response if the association succeeds

If the association succeeds an HTTP 200 OK response is returned.

```
HTTP/1.1 200
```

- AWS SDK for Ruby V3

AssociateDefaultVocabulary

Service: Amazon Connect Service

Associates an existing vocabulary as the default. Contact Lens for Amazon Connect uses the vocabulary in post-call and real-time analysis sessions for the given language.

Request Syntax

```
PUT /default-vocabulary/InstanceId/LanguageCode HTTP/1.1
Content-type: application/json

{
   "VocabularyId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

LanguageCode

The language code of the vocabulary entries. For a list of languages and their corresponding language codes, see What is Amazon Transcribe?

Valid Values: `ar-AE | de-CH | de-DE | en-AB | en-AU | en-GB | en-IE | en-IN | en-US | en-WL | es-ES | es-US | fr-CA | fr-FR | hi-IN | it-IT | ja-JP | ko-KR | pt-BR | pt-PT | zh-CN | en-NZ | en-ZA | ca-ES | da-DK | fi-FI | id-ID | ms-MY | nl-NL | no-NO | pl-PL | sv-SE | tl-PH`

Required: Yes

Request Body

The request accepts the following data in JSON format.

VocabularyId

The identifier of the custom vocabulary. If this is empty, the default is set to none.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateEmailAddressAlias

Service: Amazon Connect Service

Associates an email address alias with an existing email address in an Amazon Connect instance. This creates a forwarding relationship where emails sent to the alias email address are automatically forwarded to the primary email address.

Use cases

Following are common uses cases for this API:

- **Unified customer support**: Create multiple entry points (for example, support@example.com, help@example.com, customercare@example.com) that all forward to a single agent queue for streamlined management.
- **Department consolidation**: Forward emails from legacy department addresses (for example, sales@example.com, info@example.com) to a centralized customer service email during organizational restructuring.
- **Brand management**: Enable you to use familiar brand-specific email addresses that forward to the appropriate Amazon Connect instance email address.

Important things to know

- Each email address can have a maximum of one alias. You cannot create multiple aliases for the same email address.
- If the alias email address already receives direct emails, it continues to receive direct emails plus forwarded emails.
- You cannot chain email aliases together (that is, create an alias of an alias).

`AssociateEmailAddressAlias` does not return the following information:

- A confirmation of the alias relationship details (you must call DescribeEmailAddress to verify).
- The timestamp of when the association occurred.
- The status of the forwarding configuration.

Endpoints: See Amazon Connect endpoints and quotas.

Related operations

- DisassociateEmailAddressAlias: Removes the alias association between two email addresses in an Amazon Connect instance.
- DescribeEmailAddress: View current alias configurations for an email address.
- SearchEmailAddresses: Find email addresses and their alias relationships across an instance.
- CreateEmailAddress: Create new email addresses that can participate in alias relationships.
- DeleteEmailAddress: Remove email addresses (automatically removes any alias relationships).
- UpdateEmailAddressMetadata: Modify email address properties (does not affect alias relationships).

Request Syntax

```
POST /email-addresses/InstanceId/EmailAddressId/associate-alias HTTP/1.1
Content-type: application/json

{
   "AliasConfiguration": {
      "EmailAddressId": "string"
   },
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

EmailAddressId

The identifier of the email address.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AliasConfiguration

Configuration object that specifies which email address will serve as the alias. The specified email address must already exist in the Amazon Connect instance and cannot already be configured as an alias or have an alias of its own.

Type: AliasConfiguration object

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example 1: Basic alias association

The following example creates a forwarding relationship where support@example.com (87654321-4321-4321-4321-210987654321) forwards to customerservice@example.com (11111111-2222-3333-4444-555555555555).

Request

```
POST / HTTP/1.1
Host: connect.us-east-1.amazonaws.com
Content-Length: 152
X-Amz-Target: AmazonConnectService.AssociateEmailAddressAlias
X-Amz-Date: 20170705T211529Z
Authorization: AWS4-HMAC-SHA256\
 Credential=AKIAI44QH8DHBEXAMPLE/20170705/us-east-1/connect/aws4_request,\
 SignedHeaders=content-type;host;x-amz-date;x-amz-target,\
 Signature=6bcb6a5ef9ee7585d83955e8a5c3f6d47cf581596208fc0e436fa1de26ef3f6a
Content-Type: application/x-amz-json-1.1
{
    "InstanceId": "12345678-1234-1234-1234-123456789012",
    "EmailAddressId": "87654321-4321-4321-4321-210987654321",
    "AliasConfiguration": {
        "EmailAddressId": "11111111-2222-3333-4444-555555555555"
    }
}
```

Example 2: Alias association with client token for idempotency

The following example response shows a safely created alias association with guaranteed idempotency for retry scenarios.

```
HTTP/1.1 200 OK
Date: Wed, 05 Jul 2017 21:15:29 GMT
Content-Type: application/x-amz-json-1.1
Content-Length: 2
Connection: keep-alive
x-amzn-RequestId: 12345678-1234-1234-1234-123456789012
{}
```

AssociateFlow

Service: Amazon Connect Service

Associates a connect resource to a flow.

Request Syntax

```
PUT /flow-associations/InstanceId HTTP/1.1
Content-type: application/json

{
   "FlowId": "string",
   "ResourceId": "string",
   "ResourceType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

FlowId

The identifier of the flow.

Type: String

Required: Yes

ResourceId

The identifier of the resource.

- AWS End User Messaging SMS phone number ARN when using `SMS_PHONE_NUMBER`
- AWS End User Messaging Social phone number ARN when using `WHATSAPP_MESSAGING_PHONE_NUMBER`

Type: String

Required: Yes

ResourceType

A valid resource type.

Type: String

Valid Values: `SMS_PHONE_NUMBER | INBOUND_EMAIL | OUTBOUND_EMAIL | ANALYTICS_CONNECTOR | WHATSAPP_MESSAGING_PHONE_NUMBER`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateHoursOfOperations

Service: Amazon Connect Service

Associates a set of hours of operations with another hours of operation. Refer to Administrator Guide here for more information on inheriting overrides from parent hours of operation(s).

Request Syntax

```
POST /hours-of-operations/InstanceId/HoursOfOperationId/associate-hours HTTP/1.1
Content-type: application/json

{
   "ParentHoursOfOperationConfigs": [
      {
         "HoursOfOperationId": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier of the child hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ParentHoursOfOperationConfigs

The Amazon Resource Names (ARNs) of the parent hours of operation resources to associate with the child hours of operation resource.

Type: Array of ParentHoursOfOperationConfig objects

Array Members: Minimum number of 0 items. Maximum number of 3 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateInstanceStorageConfig

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Associates a storage resource type for the first time. You can only associate one type of storage configuration in a single call. This means, for example, that you can't define an instance with multiple S3 buckets for storing chat transcripts.

This API does not create a resource that doesn't exist. It only associates it to the instance. Ensure that the resource being specified in the storage configuration, like an S3 bucket, exists when being used for association.

Request Syntax

```
PUT /instance/InstanceId/storage-config HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ResourceType": "string",
   "StorageConfig": {
      "AssociationId": "string",
      "KinesisFirehoseConfig": {
         "FirehoseArn": "string"
      },
      "KinesisStreamConfig": {
         "StreamArn": "string"
      },
      "KinesisVideoStreamConfig": {
         "EncryptionConfig": {
            "EncryptionType": "string",
            "KeyId": "string"
         },
         "Prefix": "string",
         "RetentionPeriodHours": number
      },
      "S3Config": {
         "BucketName": "string",
         "BucketPrefix": "string",
         "EncryptionConfig": {
            "EncryptionType": "string",
```

```
            "KeyId": "string"
         }
      },
      "StorageType": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ResourceType

A valid resource type. To enable streaming for real-time analysis of contacts, use the following types:

- For chat contacts, use `REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS`.

- For voice contacts, use REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS.

> **Note**
>
> REAL_TIME_CONTACT_ANALYSIS_SEGMENTS is deprecated, but it is still supported and will apply only to VOICE channel contacts. Use REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS for voice contacts moving forward.
>
> If you have previously associated a stream with REAL_TIME_CONTACT_ANALYSIS_SEGMENTS, no action is needed to update the stream to REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS.

Type: String

Valid Values: CHAT_TRANSCRIPTS | CALL_RECORDINGS | SCHEDULED_REPORTS | MEDIA_STREAMS | CONTACT_TRACE_RECORDS | AGENT_EVENTS | REAL_TIME_CONTACT_ANALYSIS_SEGMENTS | ATTACHMENTS | CONTACT_EVALUATIONS | SCREEN_RECORDINGS | REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS | REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS | EMAIL_MESSAGES

Required: Yes

StorageConfig

A valid storage type.

Type: InstanceStorageConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AssociationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateLambdaFunction

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Allows the specified Amazon Connect instance to access the specified Lambda function.

Request Syntax

```
PUT /instance/InstanceId/lambda-function HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "FunctionArn": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

FunctionArn

The Amazon Resource Name (ARN) for the Lambda function being associated. Maximum number of characters allowed is 140.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 140.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateLexBot

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Allows the specified Amazon Connect instance to access the specified Amazon Lex V1 bot. This API only supports the association of Amazon Lex V1 bots.

Request Syntax

```
PUT /instance/InstanceId/lex-bot HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "LexBot": {
      "LexRegion": "string",
      "Name": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

LexBot

The Amazon Lex bot to associate with the instance.

Type: LexBot object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociatePhoneNumberContactFlow

Service: Amazon Connect Service

Associates a flow with a phone number claimed to your Amazon Connect instance.

> **Important**
>
> If the number is claimed to a traffic distribution group, and you are calling this API using an instance in the AWS Region where the traffic distribution group was created, you can use either a full phone number ARN or UUID value for the `PhoneNumberId` URI request parameter. However, if the number is claimed to a traffic distribution group and you are calling this API using an instance in the alternate AWS Region associated with the traffic distribution group, you must provide a full phone number ARN. If a UUID is provided in this scenario, you will receive a `ResourceNotFoundException`.

Request Syntax

```
PUT /phone-number/PhoneNumberId/contact-flow HTTP/1.1
Content-type: application/json

{
   "ContactFlowId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

PhoneNumberId

A unique identifier for the phone number.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactFlowId

The identifier of the flow.

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateQueueEmailAddresses

Service: Amazon Connect Service

Associates a set of email addresses with a queue to enable agents to select different "From" (system) email addresses when replying to inbound email contacts or initiating outbound email contacts. This allows agents to handle email contacts across different brands and business units within the same queue.

Important things to know

- You can associate up to 49 additional email addresses with a single queue, plus 1 default outbound email address, for a total of 50.
- The email addresses must already exist in the Amazon Connect instance before they can be associated with a queue.
- Agents will be able to select from these associated email addresses when handling email contacts in the queue.
- For inbound email contacts, agents can select from email addresses associated with the queue where the contact was accepted.
- For outbound email contacts, agents can select from email addresses associated with their default outbound queue configured in their routing profile.

Request Syntax

```
POST /queues/InstanceId/QueueId/associate-email-addresses HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "EmailAddressesConfig": [
      {
         "EmailAddressId": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

EmailAddressesConfig

Configuration list containing the email addresses to associate with the queue. Each configuration specifies an email address ID that should be linked to this queue for routing purposes.

Type: Array of EmailAddressConfig objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateQueueQuickConnects

Service: Amazon Connect Service

Associates a set of quick connects with a queue.

Request Syntax

```
POST /queues/InstanceId/QueueId/associate-quick-connects HTTP/1.1
Content-type: application/json

{
   "QuickConnectIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

QuickConnectIds

The quick connects to associate with this queue.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateRoutingProfileQueues

Service: Amazon Connect Service

Associates a set of queues with a routing profile.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/associate-queues HTTP/1.1
Content-type: application/json

{
   "ManualAssignmentQueueConfigs": [
      {
         "QueueReference": {
            "Channel": "string",
            "QueueId": "string"
         }
      }
   ],
   "QueueConfigs": [
      {
         "Delay": number,
         "Priority": number,
         "QueueReference": {
            "Channel": "string",
            "QueueId": "string"
         }
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ManualAssignmentQueueConfigs

The manual assignment queues to associate with this routing profile.

Note: Use this config for chat, email, and task contacts. It does not support voice contacts.

Type: Array of RoutingProfileManualAssignmentQueueConfig objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

QueueConfigs

The queues to associate with this routing profile.

Type: Array of RoutingProfileQueueConfig objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateSecurityKey

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Associates a security key to the instance.

Request Syntax

```
PUT /instance/InstanceId/security-key HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Key": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Key

A valid security key in PEM format as a String.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1024.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AssociationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateSecurityProfiles

Service: Amazon Connect Service

Associate security profiles with an Entity in an Amazon Connect instance.

Request Syntax

```
POST /associate-security-profiles/InstanceId HTTP/1.1
Content-type: application/json

{
   "EntityArn": "string",
   "EntityType": "string",
   "SecurityProfiles": [
      {
         "Id": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EntityArn

Arn of a Q in Connect AI Agent.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

EntityType

Only supported type is AI_AGENT.

Type: String

Valid Values: `USER | AI_AGENT`

Required: Yes

SecurityProfiles

List of Security Profile Object.

Type: Array of SecurityProfileItem objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

AssociateTrafficDistributionGroupUser

Service: Amazon Connect Service

Associates an agent with a traffic distribution group. This API can be called only in the Region where the traffic distribution group is created.

Request Syntax

```
PUT /traffic-distribution-group/TrafficDistributionGroupId/user HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "UserId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

TrafficDistributionGroupId

The identifier of the traffic distribution group. This can be the ID or the ARN of the traffic distribution group.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account. This can be the ID or the ARN of the user.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example associates an agent with a traffic distribution group.

Sample Request

```
PUT connect.[region].amazonaws.com/traffic-distribution-group/
[traffic_distribution_group_id]/user
{
   "InstanceId": "[instance_id]",
   "UserId": "[user_id]"
```

```
}
```

Sample Response

```
{}
```

AssociateUserProficiencies

Service: Amazon Connect Service

Associates a set of proficiencies with a user.

Request Syntax

```
POST /users/InstanceId/UserId/associate-proficiencies HTTP/1.1
Content-type: application/json

{
   "UserProficiencies": [
      {
         "AttributeName": "string",
         "AttributeValue": "string",
         "Level": number
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN of the instance).

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

UserProficiencies

The proficiencies to associate with the user.

Type: Array of UserProficiency objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

AssociateWorkspace

Service: Amazon Connect Service

Associates a workspace with one or more users or routing profiles, allowing them to access the workspace's configured views and pages.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/associate HTTP/1.1
Content-type: application/json

{
   "ResourceArns": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ResourceArns

The Amazon Resource Names (ARNs) of the resources to associate with the workspace. Valid resource types are users and routing profiles.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FailedList": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string",
         "ResourceArn": "string"
      }
   ],
   "SuccessfulList": [
      {
         "ResourceArn": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FailedList

A list of resources that failed to be associated with the workspace, including error details.

Type: Array of FailedBatchAssociationSummary objects

SuccessfulList

A list of resources that were successfully associated with the workspace.

Type: Array of SuccessfulBatchAssociationSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchAssociateAnalyticsDataSet

Service: Amazon Connect Service

Associates a list of analytics datasets for a given Amazon Connect instance to a target account. You can associate multiple datasets in a single call.

Request Syntax

```
PUT /analytics-data/instance/InstanceId/associations HTTP/1.1
Content-type: application/json

{
   "DataSetIds": [ "string" ],
   "TargetAccountId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

DataSetIds

An array of dataset identifiers to associate.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

TargetAccountId

The identifier of the target account. Use to associate a dataset to a different account than the one containing the Amazon Connect instance. If not specified, by default this value is the AWS account that has the Amazon Connect instance.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Created": [
      {
         "DataSetId": "string",
         "ResourceShareArn": "string",
         "ResourceShareId": "string",
         "ResourceShareStatus": "string",
         "TargetAccountId": "string"
      }
   ],
   "Errors": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Created

Information about associations that are successfully created: `DataSetId`, `TargetAccountId`, `ResourceShareId`, `ResourceShareArn`.

Type: Array of AnalyticsDataAssociationResult objects

Errors

A list of errors for datasets that aren't successfully associated with the target account.

Type: Array of ErrorResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchCreateDataTableValue

Service: Amazon Connect Service

Creates values for attributes in a data table. The value may be a default or it may be associated with a primary value. The value must pass all customer defined validation as well as the default validation for the value type. The operation must conform to Batch Operation API Standards. Although the standard specifies that successful and failed entities are listed separately in the response, authorization fails if any primary values or attributes are unauthorized. The combination of primary values and the attribute name serve as the identifier for the individual item request.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/create HTTP/1.1
Content-type: application/json

{
   "Values": [
      {
         "AttributeName": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "Value": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias. If no alias is provided, the default behavior is identical to providing the $LATEST alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Values

A list of values to create. Each value must specify the attribute name and optionally primary values if the table has primary attributes.

Type: Array of DataTableValue objects

Array Members: Minimum number of 1 item.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Failed": [
      {
         "AttributeName": "string",
```

```
            "Message": "string",
            "PrimaryValues": [
               {
                  "AttributeName": "string",
                  "Value": "string"
               }
            ]
         }
      ],
      "Successful": [
         {
            "AttributeName": "string",
            "LockVersion": {
               "Attribute": "string",
               "DataTable": "string",
               "PrimaryValues": "string",
               "Value": "string"
            },
            "PrimaryValues": [
               {
                  "AttributeName": "string",
                  "Value": "string"
               }
            ],
            "RecordId": "string"
         }
      ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Failed

A list of values that failed to be created with error messages explaining the failure reason.

Type: Array of BatchCreateDataTableValueFailureResult objects

Successful

A list of successfully created values with their identifiers and lock versions.

Type: Array of BatchCreateDataTableValueSuccessResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchDeleteDataTableValue

Service: Amazon Connect Service

Deletes multiple values from a data table. API users may delete values at any time. When deletion is requested from the admin website, a warning is shown alerting the user of the most recent time the attribute and its values were accessed. System managed values are not deletable by customers.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/delete HTTP/1.1
Content-type: application/json

{
   "Values": [
      {
         "AttributeName": "string",
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Values

A list of value identifiers to delete, each specifying primary values, attribute name, and lock version information.

Type: Array of DataTableDeleteValueIdentifier objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Failed": [
      {
         "AttributeName": "string",
         "Message": "string",
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ],
   "Successful": [
```

```
      {
         "AttributeName": "string",
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Failed

A list of values that failed to be deleted with error messages explaining the failure reason.

Type: Array of BatchDeleteDataTableValueFailureResult objects

Successful

A list of successfully deleted values with their identifiers and updated lock versions.

Type: Array of BatchDeleteDataTableValueSuccessResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchDescribeDataTableValue

Service: Amazon Connect Service

Retrieves multiple values from a data table without evaluating expressions. Returns the raw stored values along with metadata such as lock versions and modification timestamps. "Describe" is a deprecated term but is allowed to maintain consistency with existing operations.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/describe HTTP/1.1
Content-type: application/json

{
   "Values": [
      {
         "AttributeName": "string",
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Values

A list of value identifiers to retrieve, each specifying primary values and attribute names.

Type: Array of DataTableValueIdentifier objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Failed": [
      {
         "AttributeName": "string",
         "Message": "string",
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ],
   "Successful": [
      {
         "AttributeId": "string",
         "AttributeName": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
```

```
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeId": "string",
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "RecordId": "string",
         "Value": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Failed

A list of values that failed to be retrieved with error messages explaining the failure reason.

Type: Array of BatchDescribeDataTableValueFailureResult objects

Successful

A list of successfully retrieved values with their data, metadata, and lock version information.

Type: Array of BatchDescribeDataTableValueSuccessResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

BatchDisassociateAnalyticsDataSet

Service: Amazon Connect Service

Removes a list of analytics datasets associated with a given Amazon Connect instance. You can disassociate multiple datasets in a single call.

Request Syntax

```
POST /analytics-data/instance/InstanceId/associations HTTP/1.1
Content-type: application/json

{
   "DataSetIds": [ "string" ],
   "TargetAccountId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

DataSetIds

An array of associated dataset identifiers to remove.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

TargetAccountId

The identifier of the target account. Use to disassociate a dataset from a different account than the one containing the Amazon Connect instance. If not specified, by default this value is the AWS account that has the Amazon Connect instance.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Deleted": [ "string" ],
   "Errors": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Deleted

An array of successfully disassociated dataset identifiers.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 255.

Errors

A list of errors for any datasets not successfully removed.

Type: Array of ErrorResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchGetAttachedFileMetadata

Service: Amazon Connect Service

Allows you to retrieve metadata about multiple attached files on an associated resource. Each attached file provided in the input list must be associated with the input AssociatedResourceArn.

Request Syntax

```
POST /attached-files/InstanceId?associatedResourceArn=AssociatedResourceArn HTTP/1.1
Content-type: application/json

{
   "FileIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. The supported resources are Cases and Email.

> **Note**
>
> This value must be a valid ARN.

Required: Yes

InstanceId

The unique identifier of the Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

FileIds

The unique identifiers of the attached file resource.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Errors": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string",
         "FileId": "string"
      }
   ],
   "Files": [
      {
         "AssociatedResourceArn": "string",
         "CreatedBy": { ... },
         "CreationTime": "string",
         "FileArn": "string",
         "FileId": "string",
         "FileName": "string",
         "FileSizeInBytes": number,
         "FileStatus": "string",
         "FileUseCaseType": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Errors

List of errors of attached files that could not be retrieved.

Type: Array of AttachedFileError objects

Files

List of attached files that were successfully retrieved.

Type: Array of AttachedFile objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchGetFlowAssociation

Service: Amazon Connect Service

Retrieve the flow associations for the given resources.

Request Syntax

```
POST /flow-associations-batch/InstanceId HTTP/1.1
Content-type: application/json

{
   "ResourceIds": [ "string" ],
   "ResourceType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ResourceIds

A list of resource identifiers to retrieve flow associations.

- AWS End User Messaging SMS phone number ARN when using `SMS_PHONE_NUMBER`
- AWS End User Messaging Social phone number ARN when using `WHATSAPP_MESSAGING_PHONE_NUMBER`

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Required: Yes

ResourceType

The type of resource association.

Type: String

Valid Values: `VOICE_PHONE_NUMBER`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FlowAssociationSummaryList": [
      {
         "FlowId": "string",
         "ResourceId": "string",
         "ResourceType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FlowAssociationSummaryList

Information about flow associations.

Type: Array of FlowAssociationSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

BatchPutContact

Service: Amazon Connect Service

> **Note**
>
> Only the Amazon Connect outbound campaigns service principal is allowed to assume a role in your account and call this API.

Allows you to create a batch of contacts in Amazon Connect. The outbound campaigns capability ingests dial requests via the PutDialRequestBatch API. It then uses BatchPutContact to create contacts corresponding to those dial requests. If agents are available, the dial requests are dialed out, which results in a voice call. The resulting voice call uses the same contactId that was created by BatchPutContact.

Request Syntax

```
PUT /contact/batch/InstanceId HTTP/1.1
Content-type: application/json

{

}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactDataRequestList

List of individual contact requests.

Type: Array of ContactDataRequest objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FailedRequestList": [
      {
         "FailureReasonCode": "string",
         "FailureReasonMessage": "string",
         "RequestIdentifier": "string"
      }
   ],
   "SuccessfulRequestList": [
      {
         "ContactId": "string",
         "RequestIdentifier": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FailedRequestList

List of requests for which contact creation failed.

Type: Array of FailedRequest objects

SuccessfulRequestList

List of requests for which contact was successfully created.

Type: Array of SuccessfulRequest objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

BatchUpdateDataTableValue

Service: Amazon Connect Service

Updates multiple data table values using all properties from BatchCreateDataTableValue. System managed values are not modifiable by customers. The operation requires proper lock versions to prevent concurrent modification conflicts.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/update HTTP/1.1
Content-type: application/json

{
   "Values": [
      {
         "AttributeName": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "Value": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Values

A list of values to update, each including the current lock version to ensure optimistic locking.

Type: Array of DataTableValue objects

Array Members: Minimum number of 1 item.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Failed": [
      {
         "AttributeName": "string",
         "Message": "string",
```

```
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ],
   "Successful": [
      {
         "AttributeName": "string",
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Failed

A list of values that failed to be updated with error messages explaining the failure reason.

Type: Array of BatchUpdateDataTableValueFailureResult objects

Successful

A list of successfully updated values with their new lock versions and identifiers.

Type: Array of BatchUpdateDataTableValueSuccessResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ClaimPhoneNumber

Service: Amazon Connect Service

Claims an available phone number to your Amazon Connect instance or traffic distribution group. You can call this API only in the same AWS Region where the Amazon Connect instance or traffic distribution group was created.

For more information about how to use this operation, see Claim a phone number in your country and Claim phone numbers to traffic distribution groups in the *Amazon Connect Administrator Guide*.

> **Important**
>
> You can call the SearchAvailablePhoneNumbers API for available phone numbers that you can claim. Call the DescribePhoneNumber API to verify the status of a previous ClaimPhoneNumber operation.

If you plan to claim and release numbers frequently, contact us for a service quota exception. Otherwise, it is possible you will be blocked from claiming and releasing any more numbers until up to 180 days past the oldest number released has expired.

By default you can claim and release up to 200% of your maximum number of active phone numbers. If you claim and release phone numbers using the UI or API during a rolling 180 day cycle that exceeds 200% of your phone number service level quota, you will be blocked from claiming any more numbers until 180 days past the oldest number released has expired.

For example, if you already have 99 claimed numbers and a service level quota of 99 phone numbers, and in any 180 day period you release 99, claim 99, and then release 99, you will have exceeded the 200% limit. At that point you are blocked from claiming any more numbers until you open an AWS support ticket.

Request Syntax

```
POST /phone-number/claim HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
```

```
    "InstanceId": "string",
    "PhoneNumber": "string",
    "PhoneNumberDescription": "string",
    "Tags": {
       "string" : "string"
    },
    "TargetArn": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Pattern: `^[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Type: String

Length Constraints: Maximum length of 500.

Required: No

InstanceId

The identifier of the Amazon Connect instance that phone numbers are claimed to. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. You must enter `InstanceId` or `TargetArn`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

PhoneNumber

The phone number you want to claim. Phone numbers are formatted `[+] [country code] [subscriber number including area code]`.

Type: String

Pattern: `\\+[1-9]\\d{1,14}$`

Required: Yes

PhoneNumberDescription

The description of the phone number.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `^[\W\S_]*`

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

TargetArn

The Amazon Resource Name (ARN) for Amazon Connect instances or traffic distribution groups that phone number inbound traffic is routed through. You must enter `InstanceId` or `TargetArn`.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "PhoneNumberArn": "string",
   "PhoneNumberId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PhoneNumberArn

The Amazon Resource Name (ARN) of the phone number.

Type: String

PhoneNumberId

A unique identifier for the phone number.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CompleteAttachedFileUpload

Service: Amazon Connect Service

Allows you to confirm that the attached file has been uploaded using the pre-signed URL provided in the StartAttachedFileUpload API.

Request Syntax

```
POST /attached-files/InstanceId/FileId?associatedResourceArn=AssociatedResourceArn
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. The supported resources are Cases and Email.

> **Note**
>
> This value must be a valid ARN.

Required: Yes

FileId

The unique identifier of the attached file resource.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateAgentStatus

Service: Amazon Connect Service

Creates an agent status for the specified Amazon Connect instance.

Request Syntax

```
PUT /agent-status/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "DisplayOrder": number,
   "Name": "string",
   "State": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the status.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

DisplayOrder

The display order of the status.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

Name

The name of the status.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

State

The state of the status.

Type: String

Valid Values: `ENABLED | DISABLED`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AgentStatusARN": "string",
   "AgentStatusId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AgentStatusARN

The Amazon Resource Name (ARN) of the agent status.

Type: String

AgentStatusId

The identifier of the agent status.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateContact

Service: Amazon Connect Service

> **Important**
>
> Only the VOICE, EMAIL, and TASK channels are supported.
>
> - For VOICE: The supported initiation method is `TRANSFER`. The contacts created with this initiation method have a subtype `connect:ExternalAudio`.
> - For EMAIL: The supported initiation methods are `OUTBOUND`, `AGENT_REPLY`, and `FLOW`.
> - For TASK: The supported initiation method is `API`. Contacts created with this API have a sub-type of `connect:ExternalTask`.

Creates a new VOICE, EMAIL, or TASK contact.

After a contact is created, you can move it to the desired state by using the `InitiateAs` parameter. While you can use API to create task contacts that are in the `COMPLETED` state, you must contact AWS Support before using it for bulk import use cases. Bulk import causes your requests to be throttled or fail if your CreateContact limits aren't high enough.

Request Syntax

```
PUT /contact/create-contact HTTP/1.1
Content-type: application/json

{
   "Attributes": {
      "string" : "string"
   },
   "Channel": "string",
   "ClientToken": "string",
   "Description": "string",
   "ExpiryDurationInMinutes": number,
   "InitiateAs": "string",
   "InitiationMethod": "string",
   "InstanceId": "string",
   "Name": "string",
   "PreviousContactId": "string",
   "References": {
```

```
      "string" : {
         "Arn": "string",
         "Status": "string",
         "StatusReason": "string",
         "Type": "string",
         "Value": "string"
      }
   },
   "RelatedContactId": "string",
   "SegmentAttributes": {
      "string" : {
         "ValueArn": "string",
         "ValueInteger": number,
         "ValueList": [
            "SegmentAttributeValue"
         ],
         "ValueMap": {
            "string" : "SegmentAttributeValue"
         },
         "ValueString": "string"
      }
   },
   "UserInfo": {
      "UserId": "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

Channel

The channel for the contact.

> **Important**
>
> The CHAT channel is not supported. The following information is incorrect. We're working to correct it.

Type: String

Valid Values: `VOICE | CHAT | TASK | EMAIL`

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

A description of the contact.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

ExpiryDurationInMinutes

Number of minutes the contact will be active for before expiring

Type: Integer

Required: No

InitiateAs

Initial state of the contact when it's created. Only TASK channel contacts can be initiated with `COMPLETED` state.

Type: String

Valid Values: `CONNECTED_TO_USER | COMPLETED`

Required: No

InitiationMethod

Indicates how the contact was initiated.

> **Important**
>
> CreateContact only supports the following initiation methods. Valid values by channel are:
>
> - For VOICE: `TRANSFER` and the subtype `connect:ExternalAudio`
> - For EMAIL: `OUTBOUND` | `AGENT_REPLY` | `FLOW`
> - For TASK: `API`
>
> The other channels listed below are incorrect. We're working to correct this information.

Type: String

Valid Values: `INBOUND | OUTBOUND | TRANSFER | QUEUE_TRANSFER | CALLBACK | API | DISCONNECT | MONITOR | EXTERNAL_OUTBOUND | WEBRTC_API | AGENT_REPLY | FLOW`

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of a the contact.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

PreviousContactId

The ID of the previous contact when creating a transfer contact. This value can be provided only for external audio contacts. For more information, see Integrate Amazon Connect Contact Lens with external voice systems in the *Amazon Connect Administrator Guide*.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

References

A formatted URL that is shown to an agent in the Contact Control Panel (CCP). Tasks can have the following reference types at the time of creation: `URL` | `NUMBER` | `STRING` | `DATE` | `EMAIL` | `ATTACHMENT`.

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

RelatedContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments (unique contact ID) using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

Attribute keys can include only alphanumeric, -, and _.

This field can be used to set Segment Contact Expiry as a duration in minutes.

> **Note**
>
> To set contact expiry, a ValueMap must be specified containing the integer number of minutes the contact will be active for before expiring, with `SegmentAttributes` like `{ "connect:ContactExpiry": {"ValueMap" : { "ExpiryDuration": { "ValueInteger": 135}}}}`.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

UserInfo

User details for the contact

> **Important**
>
> UserInfo is required when creating an EMAIL contact with `OUTBOUND` and `AGENT_REPLY` contact initiation methods.

Type: UserInfo object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactArn": "string",
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactArn

The Amazon Resource Name (ARN) of the created contact.

Type: String

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateContactFlow

Service: Amazon Connect Service

Creates a flow for the specified Amazon Connect instance.

You can also create and update flows using the Amazon Connect Flow language.

Request Syntax

```
PUT /contact-flows/InstanceId HTTP/1.1
Content-type: application/json

{
   "Content": "string",
   "Description": "string",
   "Name": "string",
   "Status": "string",
   "Tags": {
      "string" : "string"
   },
   "Type": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

The JSON string that represents the content of the flow. For an example, see Example flow in Amazon Connect Flow language.

Length Constraints: Minimum length of 1. Maximum length of 256000.

Type: String

Required: Yes

Description

The description of the flow.

Type: String

Required: No

Name

The name of the flow.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Status

Indicates the flow status as either SAVED or PUBLISHED. The PUBLISHED status will initiate validation on the content. the SAVED status does not initiate validation of the content. SAVED | PUBLISHED.

Type: String

Valid Values: PUBLISHED | SAVED

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Type

The type of the flow. For descriptions of the available types, see Choose a flow type in the *Amazon Connect Administrator Guide*.

Type: String

Valid Values: `CONTACT_FLOW | CUSTOMER_QUEUE | CUSTOMER_HOLD | CUSTOMER_WHISPER | AGENT_HOLD | AGENT_WHISPER | OUTBOUND_WHISPER | AGENT_TRANSFER | QUEUE_TRANSFER | CAMPAIGN`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowArn": "string",
   "ContactFlowId": "string",
   "FlowContentSha256": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowArn

The Amazon Resource Name (ARN) of the flow.

Type: String

ContactFlowId

The identifier of the flow.

Type: String

Length Constraints: Maximum length of 500.

FlowContentSha256

Indicates the checksum value of the latest published flow content.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9]{64}$`

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidContactFlowException

The flow is not valid.

problems

The problems with the flow. Please fix before trying again.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateContactFlowModule

Service: Amazon Connect Service

Creates a flow module for the specified Amazon Connect instance.

Request Syntax

```
PUT /contact-flow-modules/InstanceId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Content": "string",
   "Description": "string",
   "ExternalInvocationConfiguration": {
      "Enabled": boolean
   },
   "Name": "string",
   "Settings": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Content

The JSON string that represents the content of the flow. For an example, see Example flow in Amazon Connect Flow language.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256000.

Required: Yes

Description

The description of the flow module.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `.*\S.*`

Required: No

ExternalInvocationConfiguration

The external invocation configuration for the flow module.

Type: ExternalInvocationConfiguration object

Required: No

Name

The name of the flow module.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `.*\S.*`

Required: Yes

Settings

The configuration settings for the flow module.

Type: String

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) of the flow module.

Type: String

Id

The identifier of the flow module.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidContactFlowModuleException

The problems with the module. Please fix before trying again.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateContactFlowModuleAlias

Service: Amazon Connect Service

Creates a named alias that points to a specific version of a contact flow module.

Request Syntax

```
PUT /contact-flow-modules/InstanceId/ContactFlowModuleId/alias HTTP/1.1
Content-type: application/json

{
   "AliasName": "string",
   "ContactFlowModuleVersion": number,
   "Description": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

AliasName

The name of the alias.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^([$0-9a-zA-Z][_-]?)+$`

Required: Yes

ContactFlowModuleVersion

The version of the flow module.

Type: Long

Valid Range: Minimum value of 1.

Required: Yes

Description

The description of the alias.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModuleArn": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModuleArn

The Amazon Resource Name (ARN) of the flow module.

Type: String

Id

The identifier of the alias.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of CreateContactFlowModuleAlias.

```
{
  "AliasName": "production",
  "ContactFlowModuleVersion": 2,
  "Description": "Production version of the customer service module"
}
```

Sample Response

This example illustrates one usage of CreateContactFlowModuleAlias.

```
{
  "ContactFlowModuleArn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
  "Id": "12345678-1234-1234-1234-1234678-1234-1234-1234-123456789012-12345678"
}
```

CreateContactFlowModuleVersion

Service: Amazon Connect Service

Creates an immutable snapshot of a contact flow module, preserving its content and settings at a specific point in time for version control and rollback capabilities.

Request Syntax

```
PUT /contact-flow-modules/InstanceId/ContactFlowModuleId/version HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "FlowModuleContentSha256": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the flow module version.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `.*\S.*`

Required: No

FlowModuleContentSha256

Indicates the checksum value of the flow module content.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9]{64}$`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModuleArn": "string",
   "Version": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModuleArn

The Amazon Resource Name (ARN) of the flow module.

Type: String

Version

The version of the flow module.

Type: Long

Valid Range: Minimum value of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of CreateContactFlowModuleVersion.

```
{
  "Description": "Initial version of the customer service module"
}
```

Sample Response

This example illustrates one usage of CreateContactFlowModuleVersion.

```
{
  "ContactFlowModuleArn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
```

```
  "Version": 1
}
```

CreateContactFlowVersion

Service: Amazon Connect Service

Publishes a new version of the flow provided. Versions are immutable and monotonically increasing. If the `FlowContentSha256` provided is different from the `FlowContentSha256` of the `$LATEST` published flow content, then an error is returned. This API only supports creating versions for flows of type `Campaign`.

Request Syntax

```
PUT /contact-flows/InstanceId/ContactFlowId/version HTTP/1.1
Content-type: application/json

{
   "ContactFlowVersion": number,
   "Description": "string",
   "FlowContentSha256": "string",
   "LastModifiedRegion": "string",
   "LastModifiedTime": number
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactFlowVersion

The identifier of the flow version.

Type: Long

Valid Range: Minimum value of 1.

Required: No

Description

The description of the flow version.

Type: String

Required: No

FlowContentSha256

Indicates the checksum value of the flow content.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9]{64}$`

Required: No

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

Required: No

LastModifiedTime

The AWS Region where this resource was last modified.

Type: Timestamp

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowArn": "string",
   "Version": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowArn

The Amazon Resource Name (ARN) of the flow.

Type: String

Version

The identifier of the flow version.

Type: Long

Valid Range: Minimum value of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of CreateContactFlowVersion.

```
{
  "Description": "description of the flow version"
}
```

Sample Response

This example illustrates one usage of CreateContactFlowVersion.

```
{
  "ContactFlowArn": "[contact_flow_arn]",
  "Version": 1
}
```

CreateDataTable

Service: Amazon Connect Service

Creates a new data table with the specified properties. Supports the creation of all table properties except for attributes and values. A table with no attributes and values is a valid state for a table. The number of tables per instance is limited to 100 per instance. Customers can request an increase by using AWS Service Quotas.

Request Syntax

```
PUT /data-tables/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "Status": "string",
   "Tags": {
      "string" : "string"
   },
   "TimeZone": "string",
   "ValueLockLevel": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The unique identifier for the Amazon Connect instance where the data table will be created.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

An optional description for the data table. Must conform to Connect human readable string specification and have 0-250 characters. Whitespace must be trimmed first.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Pattern: `^[\\P{C}\r\n\t]+$`

Required: No

Name

The name for the data table. Must conform to Connect human readable string specification and have 1-127 characters. Whitespace must be trimmed first. Must not start with the reserved case insensitive values 'connect:' and 'aws:'. Must be unique for the instance using case-insensitive comparison.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

Status

The status of the data table. One of PUBLISHED or SAVED. Required parameter that determines the initial state of the table.

Type: String

Valid Values: `PUBLISHED`

Required: Yes

Tags

Key value pairs for attribute based access control (TBAC or ABAC). Optional tags to apply to the data table for organization and access control purposes.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

TimeZone

The IANA timezone identifier to use when resolving time based dynamic values. Required even if no time slices are specified.

Type: String

Required: Yes

ValueLockLevel

The data level that concurrent value edits are locked on. One of DATA_TABLE, PRIMARY_VALUE, ATTRIBUTE, VALUE, and NONE. NONE is the default if unspecified. This determines how concurrent edits are handled when multiple users attempt to modify values simultaneously.

Type: String

Valid Values: `NONE | DATA_TABLE | PRIMARY_VALUE | ATTRIBUTE | VALUE`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string",
   "LockVersion": {
      "Attribute": "string",
```

```
        "DataTable": "string",
        "PrimaryValues": "string",
        "Value": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) for the created data table. Does not include the version alias.

Type: String

Id

The unique identifier for the created data table. Does not include the version alias.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

LockVersion

The lock version information for the created data table, used for optimistic locking and table versioning.

Type: DataTableLockVersion object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateDataTableAttribute

Service: Amazon Connect Service

Adds an attribute to an existing data table. Creating a new primary attribute uses the empty value for the specified value type for all existing records. This should not affect uniqueness of published data tables since the existing primary values will already be unique. Creating attributes does not create any values. System managed tables may not allow customers to create new attributes.

Request Syntax

```
PUT /data-tables/InstanceId/DataTableId/attributes HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "Primary": boolean,
   "Validation": {
      "Enum": {
         "Strict": boolean,
         "Values": [ "string" ]
      },
      "ExclusiveMaximum": number,
      "ExclusiveMinimum": number,
      "IgnoreCase": boolean,
      "Maximum": number,
      "MaxLength": number,
      "MaxValues": number,
      "Minimum": number,
      "MinLength": number,
      "MinValues": number,
      "MultipleOf": number
   },
   "ValueType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias. If the version is provided as part of the identifier or ARN, the version must be one of the two available system managed aliases, $SAVED or $LATEST.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

An optional description for the attribute. Must conform to Connect human readable string specification and have 0-250 characters. Whitespace trimmed before persisting.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Pattern: `^[\\P{C}\r\n\t]+$`

Required: No

Name

The name for the attribute. Must conform to Connect human readable string specification and have 1-127 characters. Must not start with the reserved case insensitive values 'connect:' and 'aws:'. Whitespace trimmed before persisting. Must be unique for the data table using case-insensitive comparison.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

Primary

Optional boolean that defaults to false. Determines if the value is used to identify a record in the table. Values for primary attributes must not be expressions.

Type: Boolean

Required: No

Validation

Optional validation rules for the attribute. Borrows heavily from JSON Schema - Draft 2020-12. The maximum length of arrays within validations and depth of validations is 5. There are default limits that apply to all types. Customer specified limits in excess of the default limits are not permitted.

Type: Validation object

Required: No

ValueType

The type of value allowed or the resultant type after the value's expression is evaluated. Must be one of TEXT, TEXT_LIST, NUMBER, NUMBER_LIST, and BOOLEAN.

Type: String

Valid Values: `TEXT | NUMBER | BOOLEAN | TEXT_LIST | NUMBER_LIST`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AttributeId": "string",
```

```
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   },
   "Name": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AttributeId

The unique identifier assigned to the created attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

LockVersion

The lock version information for the data table and attribute, used for optimistic locking and versioning.

Type: DataTableLockVersion object

Name

The name of the created attribute since it also serves as the identifier. This could be different than the parameter passed in since it will be trimmed for whitespace.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateEmailAddress

Service: Amazon Connect Service

Create new email address in the specified Amazon Connect instance. For more information about email addresses, see Create email addresses in the Amazon Connect Administrator Guide.

Request Syntax

```
PUT /email-addresses/InstanceId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Description": "string",
   "DisplayName": "string",
   "EmailAddress": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

The description of the email address.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

DisplayName

The display name of email address

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

EmailAddress

The email address, including the domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `[^\s@]+@[^\s@]+\.[^\s@]+`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EmailAddressArn": "string",
   "EmailAddressId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EmailAddressArn

The Amazon Resource Name (ARN) of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EmailAddressId

The identifier of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateEvaluationForm

Service: Amazon Connect Service

Creates an evaluation form in the specified Amazon Connect instance. The form can be used to define questions related to agent performance, and create sections to organize such questions. Question and section identifiers cannot be duplicated within the same evaluation form.

Request Syntax

```
PUT /evaluation-forms/InstanceId HTTP/1.1
Content-type: application/json

{
   "AsDraft": boolean,
   "AutoEvaluationConfiguration": {
      "Enabled": boolean
   },
   "ClientToken": "string",
   "Description": "string",
   "Items": [
      { ... }
   ],
   "LanguageConfiguration": {
      "FormLanguage": "string"
   },
   "ReviewConfiguration": {
      "EligibilityDays": number,
      "ReviewNotificationRecipients": [
         {
            "Type": "string",
            "Value": {
               "UserId": "string"
            }
         }
      ]
   },
   "ScoringStrategy": {
      "Mode": "string",
      "Status": "string"
   },
   "Tags": {
      "string" : "string"
   },
```

```
    "TargetConfiguration": {
       "ContactInteractionType": "string"
    },
    "Title": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AsDraft

A boolean flag indicating whether to create evaluation form in draft state.

Type: Boolean

Required: No

AutoEvaluationConfiguration

Configuration information about automated evaluations.

Type: EvaluationFormAutoEvaluationConfiguration object

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

The description of the evaluation form.

Type: String

Required: No

Items

Items that are part of the evaluation form. The total number of sections and questions must not exceed 100 each. Questions must be contained in a section.

Type: Array of EvaluationFormItem objects

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Required: Yes

LanguageConfiguration

Configuration for language settings of the evaluation form.

Type: EvaluationFormLanguageConfiguration object

Required: No

ReviewConfiguration

Configuration information about evaluation reviews.

Type: EvaluationReviewConfiguration object

Required: No

ScoringStrategy

A scoring strategy of the evaluation form.

Type: EvaluationFormScoringStrategy object

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

TargetConfiguration

Configuration that specifies the target for the evaluation form.

Type: EvaluationFormTargetConfiguration object

Required: No

Title

A title of the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "EvaluationFormArn": "string",
   "EvaluationFormId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormArn

The Amazon Resource Name (ARN) for the evaluation form resource.

Type: String

EvaluationFormId

The unique identifier for the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example creates an evaluation form with two sections and two questions for each section.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "Title": "form-title",
   "Description": "form-description",
   "ScoringStrategy": {
        "Mode": "SECTION_ONLY",
        "Status": "ENABLED"
   },
   "Items": [
   {
        "Section": {
            "Title": "section-title-1",
            "RefId": "section-1",
            "Instructions": "section-instruction-1",
            "Weight": 50,
            "Items": [
                {
                    "Question": {
                        "Title": "question-title-1-1",
                        "RefId": "question-1-1",
                        "Instructions": "question-instructions",
                        "NotApplicableEnabled": false,
                        "QuestionType": "TEXT"
                    }
                },
                {
                    "Question": {
                        "Title": "question-title-1-2",
                        "RefId": "question-1-2",
                        "QuestionType": "SINGLESELECT",
                        "NotApplicableEnabled": false,
                        "QuestionTypeProperties": {
                            "SingleSelect": {
                                "Options": [
                                    {
                                        "RefId": "option-1-2-1",
                                        "Text": "first-option",
                                        "Score": 1,
                                        "AutomaticFail": true
                                    },
                                    {
                                        "RefId": "option-1-2-2",
```

```
                                    "Text": "second-option",
                                    "Score": 1,
                                    "AutomaticFail": false

CreateHoursOfOperation

Service: Amazon Connect Service

Creates hours of operation.

Request Syntax

```
PUT /hours-of-operations/InstanceId HTTP/1.1
Content-type: application/json

{
   "Config": [
      {
         "Day": "string",
         "EndTime": {
            "Hours": number,
            "Minutes": number
         },
         "StartTime": {
            "Hours": number,
            "Minutes": number
         }
      }
   ],
   "Description": "string",
   "Name": "string",
   "ParentHoursOfOperationConfigs": [
      {
         "HoursOfOperationId": "string"
      }
   ],
   "Tags": {
      "string" : "string"
   },
   "TimeZone": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Config

Configuration information for the hours of operation: day, start time, and end time.

Type: Array of HoursOfOperationConfig objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: Yes

Description

The description of the hours of operation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name of the hours of operation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

ParentHoursOfOperationConfigs

Configuration for parent hours of operations. Eg: ResourceArn.

For more information about parent hours of operations, see Link overrides from different hours of operation in the *Administrator Guide*.

Type: Array of ParentHoursOfOperationConfig objects

Array Members: Minimum number of 0 items. Maximum number of 3 items.

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

TimeZone

The time zone of the hours of operation.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperationArn": "string",
   "HoursOfOperationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperationArn

The Amazon Resource Name (ARN) for the hours of operation.

Type: String

HoursOfOperationId

The identifier for the hours of operation.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateHoursOfOperationOverride

Service: Amazon Connect Service

Creates an hours of operation override in an Amazon Connect hours of operation resource.

Request Syntax

```
PUT /hours-of-operations/InstanceId/HoursOfOperationId/overrides HTTP/1.1
Content-type: application/json

{
   "Config": [
      {
         "Day": "string",
         "EndTime": {
            "Hours": number,
            "Minutes": number
         },
         "StartTime": {
            "Hours": number,
            "Minutes": number
         }
      }
   ],
   "Description": "string",
   "EffectiveFrom": "string",
   "EffectiveTill": "string",
   "Name": "string",
   "OverrideType": "string",
   "RecurrenceConfig": {
      "RecurrencePattern": {
         "ByMonth": [ number ],
         "ByMonthDay": [ number ],
         "ByWeekdayOccurrence": [ number ],
         "Frequency": "string",
         "Interval": number
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Config

Configuration information for the hours of operation override: day, start time, and end time.

Type: Array of HoursOfOperationOverrideConfig objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: Yes

Description

The description of the hours of operation override.

Type: String

Pattern: `^[\P{C}\r\n\t]{1,250}$`

Required: No

EffectiveFrom

The date from when the hours of operation override is effective.

Type: String

Pattern: `^\d{4}-\d{2}-\d{2}$`

Required: Yes

EffectiveTill

The date until when the hours of operation override is effective.

Type: String

Pattern: `^\d{4}-\d{2}-\d{2}$`

Required: Yes

Name

The name of the hours of operation override.

Type: String

Pattern: `^[\P{C}\r\n\t]{1,127}$`

Required: Yes

OverrideType

Whether the override will be defined as a *standard* or as a *recurring event*.

For more information about how override types are applied, see Build your list of overrides in the *Administrator Guide*.

Type: String

Valid Values: `STANDARD | OPEN | CLOSED`

Required: No

RecurrenceConfig

Configuration for a recurring event.

Type: RecurrenceConfig object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperationOverrideId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperationOverrideId

The identifier for the hours of operation override.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 36.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateInstance

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Initiates an Amazon Connect instance with all the supported channels enabled. It does not attach any storage, such as Amazon Simple Storage Service (Amazon S3) or Amazon Kinesis. It also does not allow for any configurations on features, such as Contact Lens for Amazon Connect.

For more information, see Create an Amazon Connect instance in the *Amazon Connect Administrator Guide*.

Amazon Connect enforces a limit on the total number of instances that you can create or delete in 30 days. If you exceed this limit, you will get an error message indicating there has been an excessive number of attempts at creating or deleting instances. You must wait 30 days before you can restart creating and deleting instances in your account.

Request Syntax

```
PUT /instance HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "DirectoryId": "string",
   "IdentityManagementType": "string",
   "InboundCallsEnabled": boolean,
   "InstanceAlias": "string",
   "OutboundCallsEnabled": boolean,
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

The idempotency token.

Type: String

Length Constraints: Maximum length of 500.

Required: No

DirectoryId

The identifier for the directory.

Type: String

Length Constraints: Fixed length of 12.

Pattern: `^d-[0-9a-f]{10}$`

Required: No

IdentityManagementType

The type of identity management for your Amazon Connect users.

Type: String

Valid Values: `SAML | CONNECT_MANAGED | EXISTING_DIRECTORY`

Required: Yes

InboundCallsEnabled

Your contact center handles incoming contacts.

Type: Boolean

Required: Yes

InstanceAlias

The name for your instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 45.

Pattern: `^(?!d-)([\da-zA-Z]+)([-]*[\da-zA-Z])*$`

Required: No

OutboundCallsEnabled

Your contact center allows outbound calls.

Type: Boolean

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, `{ "tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) of the instance.

Type: String

Id

The identifier for the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateIntegrationAssociation

Service: Amazon Connect Service

Creates an AWS resource association with an Amazon Connect instance.

Request Syntax

```
PUT /instance/InstanceId/integration-associations HTTP/1.1
Content-type: application/json

{
   "IntegrationArn": "string",
   "IntegrationType": "string",
   "SourceApplicationName": "string",
   "SourceApplicationUrl": "string",
   "SourceType": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

IntegrationArn

The Amazon Resource Name (ARN) of the integration.

> **Note**
>
> When integrating with AWS End User Messaging, the Amazon Connect and AWS End User Messaging instances must be in the same account.

Type: String

Required: Yes

IntegrationType

The type of information to be ingested.

Type: String

Valid Values: `EVENT | VOICE_ID | PINPOINT_APP | WISDOM_ASSISTANT | WISDOM_KNOWLEDGE_BASE | WISDOM_QUICK_RESPONSES | Q_MESSAGE_TEMPLATES | CASES_DOMAIN | APPLICATION | FILE_SCANNER | SES_IDENTITY | ANALYTICS_CONNECTOR | CALL_TRANSFER_CONNECTOR | COGNITO_USER_POOL | MESSAGE_PROCESSOR`

Required: Yes

SourceApplicationName

The name of the external application. This field is only required for the EVENT integration type.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9_ -]+$`

Required: No

SourceApplicationUrl

The URL for the external application. This field is only required for the EVENT integration type.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000.

Required: No

SourceType

The type of the data source. This field is only required for the EVENT integration type.

Type: String

Valid Values: `SALESFORCE | ZENDESK | CASES`

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "IntegrationAssociationArn": "string",
   "IntegrationAssociationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

IntegrationAssociationArn

The Amazon Resource Name (ARN) for the association.

Type: String

IntegrationAssociationId

The identifier for the integration association.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateNotification

Service: Amazon Connect Service

Creates a new notification to be delivered to specified recipients. Notifications can include localized content with links, and an optional expiration time. Recipients can be specified as individual user ARNs or instance ARNs to target all users in an instance.

Request Syntax

```
PUT /notifications/InstanceId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Content": {
      "string" : "string"
   },
   "ExpiresAt": number,
   "PredefinedNotificationId": "string",
   "Priority": "string",
   "Recipients": [ "string" ],
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Content

The localized content of the notification. A map where keys are locale codes and values are the notification text in that locale. Content supports links. Maximum 250 characters per locale.

Type: String to string map

Valid Keys: `en_US | de_DE | es_ES | fr_FR | id_ID | it_IT | ja_JP | ko_KR | pt_BR | zh_CN | zh_TW`

Value Length Constraints: Minimum length of 0. Maximum length of 500.

Required: Yes

ExpiresAt

The timestamp when the notification should expire and no longer be displayed to users. If not specified, defaults to one week from creation.

Type: Timestamp

Required: No

PredefinedNotificationId

This parameter has been deprecated.

The unique identifier for a notification.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Priority

The priority level of the notification. Valid values are HIGH and LOW. High priority notifications are displayed above low priority notifications.

Type: String

Valid Values: `HIGH | LOW`

Required: No

Recipients

A list of Amazon Resource Names (ARNs) identifying the recipients of the notification. Can include user ARNs or instance ARNs to target all users in an instance. Maximum of 200 recipients.

Type: Array of strings

Array Members: Maximum number of 200 items.

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, `{ "Tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NotificationArn": "string",
   "NotificationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NotificationArn

The Amazon Resource Name (ARN) of the created notification.

Type: String

NotificationId

The unique identifier assigned to the created notification.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

CreateParticipant

Service: Amazon Connect Service

Adds a new participant into an on-going chat contact or webRTC call. For more information, see Customize chat flow experiences by integrating custom participants or Enable multi-user web, in-app, and video calling.

Request Syntax

```
POST /contact/create-participant HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ContactId": "string",
   "InstanceId": "string",
   "ParticipantDetails": {
      "DisplayName": "string",
      "ParticipantCapabilities": {
         "ScreenShare": "string",
         "Video": "string"
      },
      "ParticipantRole": "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact in this instance of Amazon Connect. Supports contacts in the CHAT channel and VOICE (WebRTC) channels. For WebRTC calls, this should be the initial contact ID that was generated when the contact was first created (from the StartWebRTCContact API) in the VOICE channel

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ParticipantDetails

Information identifying the participant.

> **Important**
>
> The only valid value for `ParticipantRole` is `CUSTOM_BOT` for chat contact and `CUSTOMER` for voice contact.

Type: ParticipantDetailsToAdd object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ParticipantCredentials": {
      "Expiry": "string",
      "ParticipantToken": "string"
   },
   "ParticipantId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ParticipantCredentials

The token used by the chat participant to call `CreateParticipantConnection`. The participant token is valid for the lifetime of a chat participant.

Type: ParticipantTokenCredentials object

ParticipantId

The identifier for a chat participant. The participantId for a chat participant is the same throughout the chat lifecycle.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreatePersistentContactAssociation

Service: Amazon Connect Service

Enables rehydration of chats for the lifespan of a contact. For more information about chat rehydration, see Enable persistent chat in the *Amazon Connect Administrator Guide*.

Request Syntax

```
POST /contact/persistent-contact-association/InstanceId/InitialContactId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "RehydrationType": "string",
   "SourceContactId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InitialContactId

This is the contactId of the current contact that the `CreatePersistentContactAssociation` API is being called from.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

RehydrationType

The contactId chosen for rehydration depends on the type chosen.

- `ENTIRE_PAST_SESSION`: Rehydrates a chat from the most recently terminated past chat contact of the specified past ended chat session. To use this type, provide the `initialContactId` of the past ended chat session in the `sourceContactId` field. In this type, Amazon Connect determines what the most recent chat contact on the past ended chat session and uses it to start a persistent chat.
- `FROM_SEGMENT`: Rehydrates a chat from the specified past chat contact provided in the `sourceContactId` field.

The actual contactId used for rehydration is provided in the response of this API.

To illustrate how to use rehydration type, consider the following example: A customer starts a chat session. Agent a1 accepts the chat and a conversation starts between the customer and Agent a1. This first contact creates a contact ID **C1**. Agent a1 then transfers the chat to Agent a2. This creates another contact ID **C2**. At this point Agent a2 ends the chat. The customer is forwarded to the disconnect flow for a post chat survey that creates another contact ID **C3**. After the chat survey, the chat session ends. Later, the customer returns and wants to resume their past chat session. At this point, the customer can have following use cases:

- **Use Case 1**: The customer wants to continue the past chat session but they want to hide the post chat survey. For this they will use the following configuration:
  - **Configuration**
    - SourceContactId = "C2"
    - RehydrationType = "FROM_SEGMENT"
  - **Expected behavior**

- This starts a persistent chat session from the specified past ended contact (C2). Transcripts of past chat sessions C2 and C1 are accessible in the current persistent chat session. Note that chat segment C3 is dropped from the persistent chat session.

- **Use Case 2**: The customer wants to continue the past chat session and see the transcript of the entire past engagement, including the post chat survey. For this they will use the following configuration:
  - **Configuration**
    - SourceContactId = "C1"
    - RehydrationType = "ENTIRE_PAST_SESSION"
  - **Expected behavior**
    - This starts a persistent chat session from the most recently ended chat contact (C3). Transcripts of past chat sessions C3, C2 and C1 are accessible in the current persistent chat session.

Type: String

Valid Values: `ENTIRE_PAST_SESSION | FROM_SEGMENT`

Required: Yes

SourceContactId

The contactId from which a persistent chat session must be started.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContinuedFromContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContinuedFromContactId

The contactId from which a persistent chat session is started. This field is populated only for persistent chat.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreatePredefinedAttribute

Service: Amazon Connect Service

Creates a new predefined attribute for the specified Amazon Connect instance. A *predefined attribute* is made up of a name and a value.

For the predefined attributes per instance quota, see Amazon Connect quotas.

Use cases

Following are common uses cases for this API:

- Create an attribute for routing proficiency (for example, agent certification) that has predefined values (for example, a list of possible certifications). For more information, see Create predefined attributes for routing contacts to agents.
- Create an attribute for business unit name that has a list of predefined business unit names used in your organization. This is a use case where information for a contact varies between transfers or conferences. For more information, see Use contact segment attributes.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
PUT /predefined-attributes/InstanceId HTTP/1.1
Content-type: application/json

{
   "AttributeConfiguration": {
      "EnableValueValidationOnAssociation": boolean
   },
   "Name": "string",
   "Purposes": [ "string" ],
   "Values": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttributeConfiguration

Custom metadata that is associated to predefined attributes to control behavior in upstream services, such as controlling how a predefined attribute should be displayed in the Amazon Connect admin website.

Type: InputPredefinedAttributeConfiguration object

Required: No

Name

The name of the predefined attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Purposes

Values that enable you to categorize your predefined attributes. You can use them in custom UI elements across the Amazon Connect admin website.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Values

The values of the predefined attribute.

Type: PredefinedAttributeValues object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following request and response example shows setting the proficiency on an attribute named Name1.

```
PUT https://connect.us-west-2.amazonaws.com/predefined-attributes/InstanceId HTTP/1.1
Content-type: application/json
{
    "Name": "Name1",
    "Values": {
        "StringList": [
            "value1"
        ]
    },
    "Purposes": [
        "proficiency"
    ],
    "Configuration": {
        "EnableValueValidationOnAssociation": true
    }
}

Response:
200
```

CreatePrompt

Service: Amazon Connect Service

Creates a prompt. For more information about prompts, such as supported file types and maximum length, see Create prompts in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /prompts/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "S3Uri": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name of the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

S3Uri

The URI for the S3 bucket where the prompt is stored. You can provide S3 pre-signed URLs returned by the GetPromptFile API instead of providing S3 URIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000.

Pattern: `s3://\S+/.+|https://\\S+\\.s3\\.\\S+\\.amazonaws\\.com/\\S+`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "PromptARN": "string",
   "PromptId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PromptARN

The Amazon Resource Name (ARN) of the prompt.

Type: String

PromptId

A unique identifier for the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreatePushNotificationRegistration

Service: Amazon Connect Service

Creates registration for a device token and a chat contact to receive real-time push notifications. For more information about push notifications, see Set up push notifications in Amazon Connect for mobile chat in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /push-notification/InstanceId/registrations HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ContactConfiguration": {
      "ContactId": "string",
      "IncludeRawMessage": boolean,
      "ParticipantRole": "string"
   },
   "DeviceToken": "string",
   "DeviceType": "string",
   "PinpointAppArn": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactConfiguration

The contact configuration for push notification registration.

Type: ContactConfiguration object

Required: Yes

DeviceToken

The push notification token issued by the Apple or Google gateways.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

DeviceType

The device type to use when sending the message.

Type: String

Valid Values: `GCM | APNS | APNS_SANDBOX`

Required: Yes

PinpointAppArn

The Amazon Resource Name (ARN) of the Pinpoint application.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "RegistrationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

RegistrationId

The identifier for the registration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateQueue

Service: Amazon Connect Service

Creates a new queue for the specified Amazon Connect instance.

Important

- If the phone number is claimed to a traffic distribution group that was created in the same Region as the Amazon Connect instance where you are calling this API, then you can use a full phone number ARN or a UUID for `OutboundCallerIdNumberId`. However, if the phone number is claimed to a traffic distribution group that is in one Region, and you are calling this API from an instance in another AWS Region that is associated with the traffic distribution group, you must provide a full phone number ARN. If a UUID is provided in this scenario, you will receive a `ResourceNotFoundException`.
- Only use the phone number ARN format that doesn't contain `instance` in the path, for example, `arn:aws:connect:us-east-1:1234567890:phone-number/uuid`. This is the same ARN format that is returned when you call the ListPhoneNumbersV2 API.
- If you plan to use IAM policies to allow/deny access to this API for phone number resources claimed to a traffic distribution group, see Allow or Deny queue API actions for phone numbers in a replica Region.

Request Syntax

```
PUT /queues/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "EmailAddressesConfig": [
      {
         "EmailAddressId": "string"
      }
   ],
   "HoursOfOperationId": "string",
   "MaxContacts": number,
   "Name": "string",
```

```
   "OutboundCallerConfig": {
      "OutboundCallerIdName": "string",
      "OutboundCallerIdNumberId": "string",
      "OutboundFlowId": "string"
   },
   "OutboundEmailConfig": {
      "OutboundEmailAddressId": "string"
   },
   "QuickConnectIds": [ "string" ],
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the queue.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

EmailAddressesConfig

Configuration list containing the email addresses to associate with the queue during creation. Each configuration specifies an email address ID that agents can select when handling email contacts in this queue.

Type: Array of EmailAddressConfig objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: No

HoursOfOperationId

The identifier for the hours of operation.

Type: String

Required: Yes

MaxContacts

The maximum number of contacts that can be in the queue before it is considered full.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

Name

The name of the queue.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

OutboundCallerConfig

The outbound caller ID name, number, and outbound whisper flow.

Type: OutboundCallerConfig object

Required: No

OutboundEmailConfig

The outbound email address ID for a specified queue.

Type: OutboundEmailConfig object

Required: No

QuickConnectIds

The quick connects available to agents who are working the queue.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "QueueArn": "string",
   "QueueId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

QueueArn

The Amazon Resource Name (ARN) of the queue.

Type: String

QueueId

The identifier for the queue.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateQuickConnect

Service: Amazon Connect Service

Creates a quick connect for the specified Amazon Connect instance.

Request Syntax

```
PUT /quick-connects/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "QuickConnectConfig": {
      "FlowConfig": {
         "ContactFlowId": "string"
      },
      "PhoneConfig": {
         "PhoneNumber": "string"
      },
      "QueueConfig": {
         "ContactFlowId": "string",
         "QueueId": "string"
      },
      "QuickConnectType": "string",
      "UserConfig": {
         "ContactFlowId": "string",
         "UserId": "string"
      }
   },
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the quick connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

A unique name of the quick connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

QuickConnectConfig

Configuration settings for the quick connect.

Type: QuickConnectConfig object

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "QuickConnectARN": "string",
   "QuickConnectId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

QuickConnectARN

The Amazon Resource Name (ARN) for the quick connect.

Type: String

QuickConnectId

The identifier for the quick connect.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateRoutingProfile

Service: Amazon Connect Service

Creates a new routing profile.

Request Syntax

```
PUT /routing-profiles/InstanceId HTTP/1.1
Content-type: application/json

{
   "AgentAvailabilityTimer": "string",
   "DefaultOutboundQueueId": "string",
   "Description": "string",
   "ManualAssignmentQueueConfigs": [
      {
         "QueueReference": {
            "Channel": "string",
            "QueueId": "string"
         }
      }
   ],
   "MediaConcurrencies": [
      {
         "Channel": "string",
         "Concurrency": number,
         "CrossChannelBehavior": {
            "BehaviorType": "string"
         }
      }
   ],
   "Name": "string",
   "QueueConfigs": [
      {
         "Delay": number,
         "Priority": number,
         "QueueReference": {
            "Channel": "string",
            "QueueId": "string"
         }
      }
   ],
   "Tags": {
```

```
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AgentAvailabilityTimer

Whether agents with this routing profile will have their routing order calculated based on *longest idle time* or *time since their last inbound contact*.

Type: String

Valid Values: `TIME_SINCE_LAST_ACTIVITY | TIME_SINCE_LAST_INBOUND`

Required: No

DefaultOutboundQueueId

The default outbound queue for the routing profile.

Type: String

Required: Yes

Description

Description of the routing profile. Must not be more than 250 characters.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: Yes

ManualAssignmentQueueConfigs

The manual assignment queues associated with the routing profile. If no queue is added, agents and supervisors can't pick or assign any contacts from this routing profile. The limit of 10 array members applies to the maximum number of RoutingProfileManualAssignmentQueueConfig objects that can be passed during a CreateRoutingProfile API request. It is different from the quota of 50 queues per routing profile per instance that is listed in Amazon Connect service quotas.

Note: Use this config for chat, email, and task contacts. It does not support voice contacts.

Type: Array of RoutingProfileManualAssignmentQueueConfig objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

MediaConcurrencies

The channels that agents can handle in the Contact Control Panel (CCP) for this routing profile.

Type: Array of MediaConcurrency objects

Required: Yes

Name

The name of the routing profile. Must not be more than 127 characters.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

QueueConfigs

The inbound queues associated with the routing profile. If no queue is added, the agent can make only outbound calls.

The limit of 10 array members applies to the maximum number of `RoutingProfileQueueConfig` objects that can be passed during a CreateRoutingProfile API request. It is different from the quota of 50 queues per routing profile per instance that is listed in Amazon Connect service quotas.

Type: Array of RoutingProfileQueueConfig objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "RoutingProfileArn": "string",
   "RoutingProfileId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

RoutingProfileArn

The Amazon Resource Name (ARN) of the routing profile.

Type: String

RoutingProfileId

The identifier of the routing profile.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateRule

Service: Amazon Connect Service

Creates a rule for the specified Amazon Connect instance.

Use the Rules Function language to code conditions for the rule.

Request Syntax

```
POST /rules/InstanceId HTTP/1.1
Content-type: application/json

{
   "Actions": [
      {
         "ActionType": "string",
         "AssignContactCategoryAction": {
         },
         "AssignSlaAction": {
            "CaseSlaConfiguration": {
               "FieldId": "string",
               "Name": "string",
               "TargetFieldValues": [
                  {
                     "BooleanValue": boolean,
                     "DoubleValue": number,
                     "EmptyValue": {
                     },
                     "StringValue": "string"
                  }
               ],
               "TargetSlaMinutes": number,
               "Type": "string"
            },
            "SlaAssignmentType": "string"
         },
         "CreateCaseAction": {
            "Fields": [
               {
                  "Id": "string",
                  "Value": {
                     "BooleanValue": boolean,
                     "DoubleValue": number,
```

```
                    "EmptyValue": {
                    },
                    "StringValue": "string"
                }
            }
        ],
        "TemplateId": "string"
    },
    "EndAssociatedTasksAction": {

                    }
                }
            ]
        }
    }
  ],
  "ClientToken": "string",
  "Function": "string",
  "Name": "string",
  "PublishStatus": "string",
  "TriggerEventSource": {
    "EventSourceName": "string",
    "IntegrationAssociationId": "string"
  }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Actions

A list of actions to be run when the rule is triggered.

Type: Array of RuleAction objects

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Function

The conditions of the rule.

Type: String

Required: Yes

Name

A unique name for the rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Pattern: `^[0-9a-zA-Z._-]+`

Required: Yes

PublishStatus

The publish status of the rule.

Type: String

Valid Values: `DRAFT | PUBLISHED`

Required: Yes

TriggerEventSource

The event source to trigger the rule.

Type: RuleTriggerEventSource object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "RuleArn": "string",
   "RuleId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

RuleArn

The Amazon Resource Name (ARN) of the rule.

Type: String

RuleId

A unique identifier for the rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateSecurityProfile

Service: Amazon Connect Service

Creates a security profile.

For information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
PUT /security-profiles/InstanceId HTTP/1.1
Content-type: application/json

{
   "AllowedAccessControlHierarchyGroupId": "string",
   "AllowedAccessControlTags": {
      "string" : "string"
   },
   "AllowedFlowModules": [
      {
         "FlowModuleId": "string",
         "Type": "string"
      }
   ],
   "Applications": [
      {
         "ApplicationPermissions": [ "string" ],
         "Namespace": "string",
         "Type": "string"
      }
   ],
   "Description": "string",
   "GranularAccessControlConfiguration": {
      "DataTableAccessControlConfiguration": {
         "PrimaryAttributeAccessControlConfiguration": {
            "PrimaryAttributeValues": [
               {
                  "AccessType": "string",
                  "AttributeName": "string",
                  "Values": [ "string" ]
               }
            ]
```

```
            }
         }
      },
      "HierarchyRestrictedResources": [ "string" ],
      "Permissions": [ "string" ],
      "SecurityProfileName": "string",
      "TagRestrictedResources": [ "string" ],
      "Tags": {
         "string" : "string"
      }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AllowedAccessControlHierarchyGroupId

The identifier of the hierarchy group that a security profile uses to restrict access to resources in Amazon Connect.

Type: String

Required: No

AllowedAccessControlTags

The list of tags that a security profile uses to restrict access to resources in Amazon Connect.

Type: String to string map

Map Entries: Maximum number of 4 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Value Length Constraints: Maximum length of 256.

Required: No

AllowedFlowModules

A list of Flow Modules an AI Agent can invoke as a tool.

Type: Array of FlowModule objects

Array Members: Maximum number of 10 items.

Required: No

Applications

A list of third-party applications or MCP Servers that the security profile will give access to.

Type: Array of Application objects

Array Members: Maximum number of 10 items.

Required: No

Description

The description of the security profile.

Type: String

Length Constraints: Maximum length of 250.

Required: No

GranularAccessControlConfiguration

The granular access control configuration for the security profile, including data table permissions.

Type: GranularAccessControlConfiguration object

Required: No

HierarchyRestrictedResources

The list of resources that a security profile applies hierarchy restrictions to in Amazon Connect. Following are acceptable ResourceNames: `User`.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

Permissions

Permissions assigned to the security profile. For a list of valid permissions, see List of security profile permissions.

Type: Array of strings

Array Members: Maximum number of 500 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

SecurityProfileName

The name of the security profile.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[ a-zA-Z0-9_@-]+$`

Required: Yes

TagRestrictedResources

The list of resources that a security profile applies tag restrictions to in Amazon Connect. For a list of Amazon Connect resources that you can tag, see Add tags to resources in Amazon Connect in the *Amazon Connect Administrator Guide*.

Type: Array of strings

Array Members: Maximum number of 10 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "SecurityProfileArn": "string",
   "SecurityProfileId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

SecurityProfileArn

The Amazon Resource Name (ARN) for the security profile.

Type: String

SecurityProfileId

The identifier for the security profle.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateTaskTemplate

Service: Amazon Connect Service

Creates a new task template in the specified Amazon Connect instance.

Request Syntax

```
PUT /instance/InstanceId/task/template HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Constraints": {
      "InvisibleFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ],
      "ReadOnlyFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ],
      "RequiredFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ]
   },
   "ContactFlowId": "string",
   "Defaults": {
      "DefaultFieldValues": [
         {
            "DefaultValue": "string",
            "Id": {
               "Name": "string"
            }
```

```
            }
         ]
      },
      "Description": "string",
      "Fields": [
         {
            "Description": "string",
            "Id": {
               "Name": "string"
            },
            "SingleSelectOptions": [ "string" ],
            "Type": "string"
         }
      ],
      "Name": "string",
      "SelfAssignFlowId": "string",
      "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Constraints

Constraints that are applicable to the fields listed.

Type: TaskTemplateConstraints object

Required: No

ContactFlowId

The identifier of the flow that runs by default when a task is created by referencing this template.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Defaults

The default values for fields when a task is created by referencing this template.

Type: TaskTemplateDefaults object

Required: No

Description

The description of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

Fields

Fields that are part of the template.

Type: Array of TaskTemplateField objects

Required: Yes

Name

The name of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

SelfAssignFlowId

The ContactFlowId for the flow that will be run if this template is used to create a self-assigned task.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Status

Marks a template as `ACTIVE` or `INACTIVE` for a task to refer to it. Tasks can only be created from `ACTIVE` templates. If a template is marked as `INACTIVE`, then a task that refers to this template cannot be created.

Type: String

Valid Values: `ACTIVE | INACTIVE`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) for the task template resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Id

The identifier of the task template resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

PropertyValidationException

The property is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateTestCase

Service: Amazon Connect Service

Creates a test case with its content and metadata for the specified Amazon Connect instance.

Request Syntax

```
PUT /test-cases/InstanceId HTTP/1.1
x-amz-resource-id: TestCaseId
x-amz-last-modified-time: LastModifiedTime
x-amz-last-modified-region: LastModifiedRegion
Content-type: application/json

{
   "Content": "string",
   "Description": "string",
   "EntryPoint": {
      "ChatEntryPointParameters": {
         "FlowId": "string"
      },
      "Type": "string",
      "VoiceCallEntryPointParameters": {
         "DestinationPhoneNumber": "string",
         "FlowId": "string",
         "SourcePhoneNumber": "string"
      }
   },
   "InitializationData": "string",
   "Name": "string",
   "Status": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

LastModifiedRegion

The region in which the resource was last modified

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The time at which the resource was last modified.

TestCaseId

Id of the test case if you want to create it in a replica region using Amazon Connect Global Resiliency

Length Constraints: Maximum length of 500.

Request Body

The request accepts the following data in JSON format.

Content

The JSON string that represents the content of the test.

Type: String

Required: Yes

Description

The description of the test.

Type: String

Required: No

EntryPoint

Defines the starting point for your test.

Type: TestCaseEntryPoint object

Required: No

InitializationData

Defines the initial custom attributes for your test.

Type: String

Required: No

Name

The name of the test.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Status

Indicates the test status as either SAVED or PUBLISHED. The PUBLISHED status will initiate validation on the content. The SAVED status does not initiate validation of the content.

Type: String

Valid Values: `PUBLISHED | SAVED`

Required: No

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "TestCaseArn": "string",
   "TestCaseId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

TestCaseArn

The Amazon Resource Name (ARN) of the test.

Type: String

TestCaseId

The identifier of the test.

Type: String

Length Constraints: Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

InvalidTestCaseException

The test is not valid.

Problems

The problems with the test. Please fix before trying again.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateTrafficDistributionGroup

Service: Amazon Connect Service

Creates a traffic distribution group given an Amazon Connect instance that has been replicated.

> **Note**
>
> The `SignInConfig` distribution is available only on a default `TrafficDistributionGroup` (see the `IsDefault` parameter in the TrafficDistributionGroup data type). If you call `UpdateTrafficDistribution` with a modified `SignInConfig` and a non-default `TrafficDistributionGroup`, an `InvalidRequestException` is returned.

For more information about creating traffic distribution groups, see Set up traffic distribution groups in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /traffic-distribution-group HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Description": "string",
   "InstanceId": "string",
   "Name": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

A description for the traffic distribution group.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `(^[\S].*[\S]$)|(^[\S]$)`

Required: No

InstanceId

The identifier of the Amazon Connect instance that has been replicated. You can find the `instanceId` in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Name

The name for the traffic distribution group.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `(^[\S].*[\S]$)|(^[\S]$)`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) of the traffic distribution group.

Type: String

Pattern: `^arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Id

The identifier of the traffic distribution group. This can be the ID or the ARN of the traffic distribution group.

Type: String

Pattern: `^[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ResourceNotReadyException

The resource is not ready.

HTTP Status Code: 409

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateUseCase

Service: Amazon Connect Service

Creates a use case for an integration association.

Request Syntax

```
PUT /instance/InstanceId/integration-associations/IntegrationAssociationId/use-cases
 HTTP/1.1
Content-type: application/json

{
   "Tags": {
      "string" : "string"
   },
   "UseCaseType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

IntegrationAssociationId

The identifier for the integration association.

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

UseCaseType

The type of use case to associate to the integration association. Each integration association can have only one of each use case type.

Type: String

Valid Values: `RULES_EVALUATION | CONNECT_CAMPAIGNS`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "UseCaseArn": "string",
   "UseCaseId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

UseCaseArn

The Amazon Resource Name (ARN) for the use case.

Type: String

UseCaseId

The identifier of the use case.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateUser

Service: Amazon Connect Service

Creates a user account for the specified Amazon Connect instance.

Important

Certain UserIdentityInfo parameters are required in some situations. For example, `Email`, `FirstName` and `LastName` are required if you are using Amazon Connect or SAML for identity management.

Note

Fields in `PhoneConfig` cannot be set simultaneously with their corresponding channel-specific configuration parameters. Specifically:

- `PhoneConfig.AutoAccept` conflicts with `AutoAcceptConfigs`
- `PhoneConfig.AfterContactWorkTimeLimit` conflicts with `AfterContactWorkConfigs`
- `PhoneConfig.PhoneType` and `PhoneConfig.PhoneNumber` conflict with `PhoneNumberConfigs`
- `PhoneConfig.PersistentConnection` conflicts with `PersistentConnectionConfigs`

We recommend using channel-specific parameters such as `AutoAcceptConfigs`, `AfterContactWorkConfigs`, `PhoneNumberConfigs`, `PersistentConnectionConfigs`, and `VoiceEnhancementConfigs` for per-channel configuration.

For information about how to create users using the Amazon Connect admin website, see Add Users in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /users/InstanceId HTTP/1.1
```

```
Content-type: application/json

{
   "AfterContactWorkConfigs": [
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "AgentFirstCallbackAfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "string"
      }
   ],
   "AutoAcceptConfigs": [
      {
         "AgentFirstCallbackAutoAccept": boolean,
         "AutoAccept": boolean,
         "Channel": "string"
      }
   ],
   "DirectoryUserId": "string",
   "HierarchyGroupId": "string",
   "IdentityInfo": {
      "Email": "string",
      "FirstName": "string",
      "LastName": "string",
      "Mobile": "string",
      "SecondaryEmail": "string"
   },
   "Password": "string",
   "PersistentConnectionConfigs": [
      {
         "Channel": "string",
         "PersistentConnection": boolean
      }
   ],
   "PhoneConfig": {
      "AfterContactWorkTimeLimit": number,
      "AutoAccept": boolean,
      "DeskPhoneNumber": "string",
      "PersistentConnection": boolean,
      "PhoneType": "string"
   },
```

```
   "PhoneNumberConfigs": [
      {
         "Channel": "string",
         "PhoneNumber": "string",
         "PhoneType": "string"
      }
   ],
   "RoutingProfileId": "string",
   "SecurityProfileIds": [ "string" ],
   "Tags": {
      "string" : "string"
   },
   "Username": "string",
   "VoiceEnhancementConfigs": [
      {
         "Channel": "string",
         "VoiceEnhancementMode": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AfterContactWorkConfigs

The list of after contact work (ACW) timeout configuration settings for each channel.

Type: Array of AfterContactWorkConfigPerChannel objects

Required: No

AutoAcceptConfigs

The list of auto-accept configuration settings for each channel.

Type: Array of AutoAcceptConfig objects

Required: No

DirectoryUserId

The identifier of the user account in the directory used for identity management. If Amazon Connect cannot access the directory, you can specify this identifier to authenticate users. If you include the identifier, we assume that Amazon Connect cannot access the directory. Otherwise, the identity information is used to authenticate users from your directory.

This parameter is required if you are using an existing directory for identity management in Amazon Connect when Amazon Connect cannot access your directory to authenticate users. If you are using SAML for identity management and include this parameter, an error is returned.

Type: String

Required: No

HierarchyGroupId

The identifier of the hierarchy group for the user.

Type: String

Required: No

IdentityInfo

The information about the identity of the user.

Type: UserIdentityInfo object

Required: No

Password

The password for the user account. A password is required if you are using Amazon Connect for identity management. Otherwise, it is an error to include a password.

Type: String

Pattern: `/^(?=.*[a-z])(?=.*[A-Z])(?=.*\d)[a-zA-Z\d\S]{8,64}$/`

Required: No

PersistentConnectionConfigs

The list of persistent connection configuration settings for each channel.

Type: Array of PersistentConnectionConfig objects

Required: No

PhoneConfig

The phone settings for the user. This parameter is optional. If not provided, the user can be configured using channel-specific parameters such as `AutoAcceptConfigs`, `AfterContactWorkConfigs`, `PhoneNumberConfigs`, `PersistentConnectionConfigs`, and `VoiceEnhancementConfigs`.

Type: UserPhoneConfig object

Required: No

PhoneNumberConfigs

The list of phone number configuration settings for each channel.

Type: Array of PhoneNumberConfig objects

Required: No

RoutingProfileId

The identifier of the routing profile for the user.

Type: String

Required: Yes

SecurityProfileIds

The identifier of the security profile for the user.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Username

The user name for the account. For instances not using SAML for identity management, the user name can include up to 20 characters. If you are using SAML for identity management, the user name can include up to 64 characters from [a-zA-Z0-9_-.\@]+.

Username can include @ only if used in an email format. For example:

- Correct: testuser
- Correct: testuser@example.com
- Incorrect: testuser@example

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

VoiceEnhancementConfigs

The list of voice enhancement configuration settings for each channel.

Type: Array of VoiceEnhancementConfig objects

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "UserArn": "string",
   "UserId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

UserArn

The Amazon Resource Name (ARN) of the user account.

Type: String

UserId

The identifier of the user account.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateUserHierarchyGroup

Service: Amazon Connect Service

Creates a new user hierarchy group.

Request Syntax

```
PUT /user-hierarchy-groups/InstanceId HTTP/1.1
Content-type: application/json

{
   "Name": "string",
   "ParentGroupId": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Name

The name of the user hierarchy group. Must not be more than 100 characters.

Type: String

Required: Yes

ParentGroupId

The identifier for the parent hierarchy group. The user hierarchy is created at level one if the parent group ID is null.

Type: String

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HierarchyGroupArn": "string",
   "HierarchyGroupId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HierarchyGroupArn

The Amazon Resource Name (ARN) of the hierarchy group.

Type: String

HierarchyGroupId

The identifier of the hierarchy group.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateView

Service: Amazon Connect Service

Creates a new view with the possible status of SAVED or PUBLISHED.

The views will have a unique name for each connect instance.

It performs basic content validation if the status is SAVED or full content validation if the status is set to PUBLISHED. An error is returned if validation fails. It associates either the $SAVED qualifier or both of the $SAVED and $LATEST qualifiers with the provided view content based on the status. The view is idempotent if ClientToken is provided.

Request Syntax

```
PUT /views/InstanceId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Content": {
      "Actions": [ "string" ],
      "Template": "string"
   },
   "Description": "string",
   "Name": "string",
   "Status": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique Id for each create view request to avoid duplicate view creation. For example, the view is idempotent ClientToken is provided.

Type: String

Length Constraints: Maximum length of 500.

Pattern: `^([\p{L}\p{Z}\p{N}_.:\/=+\-@]*)$`

Required: No

Content

View content containing all content necessary to render a view except for runtime input data.

The total uncompressed content has a maximum file size of 400kB.

Type: ViewInputContent object

Required: Yes

Description

The description of the view.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^([\p{L}\p{N}_.:\/=+\-@,()']+[\p{L}\p{Z}\p{N}_.:\/=+\-@,()']*)$`

Required: No

Name

The name of the view.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^([\p{L}\p{N}_.:\/=+\-@()']+[\p{L}\p{Z}\p{N}_.:\/=+\-@()']*)$`

Required: Yes

Status

Indicates the view status as either `SAVED` or `PUBLISHED`. The `PUBLISHED` status will initiate validation on the content.

Type: String

Valid Values: `PUBLISHED | SAVED`

Required: Yes

Tags

The tags associated with the view resource (not specific to view version).These tags can be used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "View": {
      "Arn": "string",
      "Content": {
         "Actions": [ "string" ],
         "InputSchema": "string",
         "Template": "string"
      },
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string",
      "Version": number,
      "VersionDescription": "string",
      "ViewContentSha256": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

View

A view resource object. Contains metadata and content necessary to render the view.

Type: View object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

CreateViewVersion

Service: Amazon Connect Service

Publishes a new version of the view identifier.

Versions are immutable and monotonically increasing.

It returns the highest version if there is no change in content compared to that version. An error is displayed if the supplied ViewContentSha256 is different from the ViewContentSha256 of the $LATEST alias.

Request Syntax

```
PUT /views/InstanceId/ViewId/versions HTTP/1.1
Content-type: application/json

{
   "VersionDescription": "string",
   "ViewContentSha256": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

VersionDescription

The description for the version being published.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^([\p{L}\p{N}_.:\/=+\-@,()']+[\p{L}\p{Z}\p{N}_.:\/=+\-@,()']*)$`

Required: No

ViewContentSha256

Indicates the checksum value of the latest published view content.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9]$`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "View": {
      "Arn": "string",
      "Content": {
         "Actions": [ "string" ],
         "InputSchema": "string",
```

```
         "Template": "string"
      },
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string",
      "Version": number,
      "VersionDescription": "string",
      "ViewContentSha256": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

View

All view data is contained within the View object.

Type: View object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

CreateVocabulary

Service: Amazon Connect Service

Creates a custom vocabulary associated with your Amazon Connect instance. You can set a custom vocabulary to be your default vocabulary for a given language. Contact Lens for Amazon Connect uses the default vocabulary in post-call and real-time contact analysis sessions for that language.

Request Syntax

```
POST /vocabulary/InstanceId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Content": "string",
   "LanguageCode": "string",
   "Tags": {
      "string" : "string"
   },
   "VocabularyName": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs. If a create request is received more than once with same client token, subsequent requests return the previous response without creating a vocabulary again.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Content

The content of the custom vocabulary in plain-text format with a table of values. Each row in the table represents a word or a phrase, described with `Phrase`, `IPA`, `SoundsLike`, and `DisplayAs` fields. Separate the fields with TAB characters. The size limit is 50KB. For more information, see Create a custom vocabulary using a table.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 60000.

Required: Yes

LanguageCode

The language code of the vocabulary entries. For a list of languages and their corresponding language codes, see What is Amazon Transcribe?

Type: String

Valid Values: `ar-AE | de-CH | de-DE | en-AB | en-AU | en-GB | en-IE | en-IN | en-US | en-WL | es-ES | es-US | fr-CA | fr-FR | hi-IN | it-IT | ja-JP | ko-KR | pt-BR | pt-PT | zh-CN | en-NZ | en-ZA | ca-ES | da-DK | fi-FI | id-ID | ms-MY | nl-NL | no-NO | pl-PL | sv-SE | tl-PH`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

VocabularyName

A unique name of the custom vocabulary.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 140.

Pattern: `^[0-9a-zA-Z._-]+`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "State": "string",
   "VocabularyArn": "string",
   "VocabularyId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

State

The current state of the custom vocabulary.

Type: String

Valid Values: `CREATION_IN_PROGRESS | ACTIVE | CREATION_FAILED | DELETE_IN_PROGRESS`

VocabularyArn

The Amazon Resource Name (ARN) of the custom vocabulary.

Type: String

VocabularyId

The identifier of the custom vocabulary.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateWorkspace

Service: Amazon Connect Service

Creates a workspace that defines the user experience by mapping views to pages. Workspaces can be assigned to users or routing profiles.

Request Syntax

```
PUT /workspaces/InstanceId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "Tags": {
      "string" : "string"
   },
   "Theme": {
      "Dark": {
         "Images": {
            "Logo": {
               "Default": "string",
               "Favicon": "string"
            }
         },
         "Palette": {
            "Canvas": {
               "ActiveBackground": "string",
               "ContainerBackground": "string",
               "PageBackground": "string"
            },
            "Header": {
               "Background": "string",
               "InvertActionsColors": boolean,
               "Text": "string",
               "TextHover": "string"
            },
            "Navigation": {
               "Background": "string",
               "InvertActionsColors": boolean,
               "Text": "string",
               "TextActive": "string",
               "TextBackgroundActive": "string",
```

```
            "TextBackgroundHover": "string",
            "TextHover": "string"
         },
         "Primary": {
            "Active": "string",
            "ContrastText": "string",
            "Default": "string"
         }
      },
      "Typography": {
         "FontFamily": {
            "Default": "string"
         }
      }
   },
   "Light": {
      "Images": {
         "Logo": {
            "Default": "string",
            "Favicon": "string"
         }
      },
      "Palette": {
         "Canvas": {
            "ActiveBackground": "string",
            "ContainerBackground": "string",
            "PageBackground": "string"
         },
         "Header": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextHover": "string"
         },
         "Navigation": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextActive": "string",
            "TextBackgroundActive": "string",
            "TextBackgroundHover": "string",
            "TextHover": "string"
         },
         "Primary": {
```

```
                "Active": "string",
                "ContrastText": "string",
                "Default": "string"
             }
          },
          "Typography": {
             "FontFamily": {
                "Default": "string"
             }
          }
       }
    },
    "Title": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the workspace. Maximum length is 250 characters.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `^[\\P{C}\r\n\t]*$`

Required: No

Name

The name of the workspace. Must be unique within the instance and can contain 1-127 characters.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `.*\\S.*`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, `{ "Tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Theme

The theme configuration for the workspace, including colors and styling.

Type: WorkspaceTheme object

Required: No

Title

The title displayed for the workspace.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 127.

Pattern: ^[\\P{C}]*$

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "WorkspaceArn": "string",
   "WorkspaceId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

WorkspaceArn

The Amazon Resource Name (ARN) of the workspace.

Type: String

WorkspaceId

The identifier of the workspace.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateWorkspacePage

Service: Amazon Connect Service

Associates a view with a page in a workspace, defining what users see when they navigate to that page.

Request Syntax

```
PUT /workspaces/InstanceId/WorkspaceId/pages HTTP/1.1
Content-type: application/json

{
   "InputData": "string",
   "Page": "string",
   "ResourceArn": "string",
   "Slug": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

InputData

A JSON string containing input parameters for the view, validated against the view's input schema.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

Page

The page identifier. Valid system pages include `HOME` and `AGENT_EXPERIENCE`. Custom pages cannot use the `aws:` or `connect:` prefixes.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 25.

Pattern: `^(?!\\.$)(?!\\.\\.$)[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]+$`

Required: Yes

ResourceArn

The Amazon Resource Name (ARN) of the view to associate with the page.

Type: String

Required: Yes

Slug

The URL-friendly identifier for the page.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^$|^[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]{3,}$`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeactivateEvaluationForm

Service: Amazon Connect Service

Deactivates an evaluation form in the specified Amazon Connect instance. After a form is deactivated, it is no longer available for users to start new evaluations based on the form.

Request Syntax

```
POST /evaluation-forms/InstanceId/EvaluationFormId/deactivate HTTP/1.1
Content-type: application/json

{
   "EvaluationFormVersion": number
}
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

The unique identifier for the evaluation form.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EvaluationFormVersion

A version of the evaluation form. If the version property is not provided, the latest version of the evaluation form is deactivated.

Type: Integer

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationFormArn": "string",
   "EvaluationFormId": "string",
   "EvaluationFormVersion": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormArn

The Amazon Resource Name (ARN) for the evaluation form resource.

Type: String

EvaluationFormId

The unique identifier for the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EvaluationFormVersion

The version of the deactivated evaluation form resource.

Type: Integer

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example deactivates version 3 of the evaluation form.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormVersion": 3
}
```

Sample Response

```
{
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
   "EvaluationFormVersion": 3
}
```

DeleteAttachedFile

Service: Amazon Connect Service

Deletes an attached file along with the underlying S3 Object.

> **Important**
>
> The attached file is **permanently deleted** if S3 bucket versioning is not enabled.

Request Syntax

```
DELETE /attached-files/InstanceId/FileId?associatedResourceArn=AssociatedResourceArn
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. Cases are the only current supported resource.

> **Note**
>
> This value must be a valid ARN.

Required: Yes

FileId

The unique identifier of the attached file resource.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier of the Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteContactEvaluation

Service: Amazon Connect Service

Deletes a contact evaluation in the specified Amazon Connect instance.

Request Syntax

```
DELETE /contact-evaluations/InstanceId/EvaluationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationId

A unique identifier for the contact evaluation.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example deletes a contact evaluation.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationId": "[evaluation_id]"
}
```

Sample Response

```
(empty response)
```

DeleteContactFlow

Service: Amazon Connect Service

Deletes a flow for the specified Amazon Connect instance.

Request Syntax

```
DELETE /contact-flows/InstanceId/ContactFlowId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteContactFlowModule

Service: Amazon Connect Service

Deletes the specified flow module.

Request Syntax

```
DELETE /contact-flow-modules/InstanceId/ContactFlowModuleId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteContactFlowModuleAlias

Service: Amazon Connect Service

Removes an alias reference, breaking the named connection to the underlying module version without affecting the version itself.

Request Syntax

```
DELETE /contact-flow-modules/InstanceId/ContactFlowModuleId/alias/AliasId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AliasId

The identifier of the alias.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of DeleteContactFlowModuleAlias.

```
DELETE /contact-flow-modules/12345678-1234-1234-1234-123456789012/
abcdefgh-1234-5678-9012-abcdefghijkl/alias/alias-12345678
```

Sample Response

This example illustrates one usage of DeleteContactFlowModuleAlias.

```
HTTP/1.1 200 OK
```

DeleteContactFlowModuleVersion

Service: Amazon Connect Service

Removes a specific version of a contact flow module.

Request Syntax

```
DELETE /contact-flow-modules/InstanceId/ContactFlowModuleId/
version/ContactFlowModuleVersion HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Required: Yes

ContactFlowModuleVersion

The version of the flow module to delete.

Valid Range: Minimum value of 1.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of DeleteContactFlowModuleVersion.

```
DELETE /contact-flow-modules/12345678-1234-1234-1234-123456789012/
abcdefgh-1234-5678-9012-abcdefghijkl/version/2
```

Sample Response

This example illustrates one usage of DeleteContactFlowModuleVersion.

```
HTTP/1.1 200 OK
```

DeleteContactFlowVersion

Service: Amazon Connect Service

Deletes the particular version specified in flow version identifier.

Request Syntax

```
DELETE /contact-flows/InstanceId/ContactFlowId/version/ContactFlowVersion HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Required: Yes

ContactFlowVersion

The identifier of the flow version.

Valid Range: Minimum value of 1.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteDataTable

Service: Amazon Connect Service

Deletes a data table and all associated attributes, versions, audits, and values. Does not update any references to the data table, even from other data tables. This includes dynamic values and conditional validations. System managed data tables are not deletable by customers. API users may delete the table at any time. When deletion is requested from the admin website, a warning is shown alerting the user of the most recent time the table and its values were accessed.

Request Syntax

```
DELETE /data-tables/InstanceId/DataTableId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table to delete. Must also accept the table ARN. Fails with an error if the version is provided and is not $LATEST.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteDataTableAttribute

Service: Amazon Connect Service

Deletes an attribute and all its values from a data table.

Request Syntax

```
DELETE /data-tables/InstanceId/DataTableId/attributes/AttributeName HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AttributeName

The name of the attribute to delete.

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

DataTableId

The unique identifier for the data table.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LockVersion

The updated lock version of the data table.

Type: DataTableLockVersion object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteEmailAddress

Service: Amazon Connect Service

Deletes email address from the specified Amazon Connect instance.

Request Syntax

```
DELETE /email-addresses/InstanceId/EmailAddressId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EmailAddressId

The identifier of the email address.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteEvaluationForm

Service: Amazon Connect Service

Deletes an evaluation form in the specified Amazon Connect instance.

- If the version property is provided, only the specified version of the evaluation form is deleted.
- If no version is provided, then the full form (all versions) is deleted.

Request Syntax

```
DELETE /evaluation-forms/InstanceId/EvaluationFormId?version=EvaluationFormVersion
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

The unique identifier for the evaluation form.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

EvaluationFormVersion

The unique identifier for the evaluation form.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example deletes version 1 of an evaluation form.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormVersion": 1
}
```

Sample Response

```
(empty)
```

DeleteHoursOfOperation

Service: Amazon Connect Service

Deletes an hours of operation.

Request Syntax

```
DELETE /hours-of-operations/InstanceId/HoursOfOperationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteHoursOfOperationOverride

Service: Amazon Connect Service

Deletes an hours of operation override in an Amazon Connect hours of operation resource.

Request Syntax

```
DELETE /hours-of-operations/InstanceId/HoursOfOperationId/
overrides/HoursOfOperationOverrideId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

HoursOfOperationOverrideId

The identifier for the hours of operation override.

Length Constraints: Minimum length of 1. Maximum length of 36.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteInstance

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Deletes the Amazon Connect instance. For more information, see Delete your Amazon Connect instance in the *Amazon Connect Administrator Guide*.

Amazon Connect enforces a limit on the total number of instances that you can create or delete in 30 days. If you exceed this limit, you will get an error message indicating there has been an excessive number of attempts at creating or deleting instances. You must wait 30 days before you can restart creating and deleting instances in your account.

Request Syntax

```
DELETE /instance/InstanceId?clientToken=ClientToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

DeleteIntegrationAssociation

Service: Amazon Connect Service

Deletes an AWS resource association from an Amazon Connect instance. The association must not have any use cases associated with it.

Request Syntax

```
DELETE /instance/InstanceId/integration-associations/IntegrationAssociationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

IntegrationAssociationId

The identifier for the integration association.

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteNotification

Service: Amazon Connect Service

Deletes a notification. Once deleted, the notification is no longer visible to all users and cannot be managed through the Admin Website or APIs.

Request Syntax

```
DELETE /notifications/InstanceId/NotificationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

NotificationId

The unique identifier for the notification to delete.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeletePredefinedAttribute

Service: Amazon Connect Service

Deletes a predefined attribute from the specified Amazon Connect instance.

Request Syntax

```
DELETE /predefined-attributes/InstanceId/Name HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of the predefined attribute.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeletePrompt

Service: Amazon Connect Service

Deletes a prompt.

Request Syntax

```
DELETE /prompts/InstanceId/PromptId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PromptId

A unique identifier for the prompt.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeletePushNotificationRegistration

Service: Amazon Connect Service

Deletes registration for a device token and a chat contact.

Request Syntax

```
DELETE /push-notification/InstanceId/registrations/RegistrationId?contactId=ContactId
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact within the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RegistrationId

The identifier for the registration.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteQueue

Service: Amazon Connect Service

Deletes a queue.

Request Syntax

```
DELETE /queues/InstanceId/QueueId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteQuickConnect

Service: Amazon Connect Service

Deletes a quick connect.

> **Important**
>
> After calling DeleteUser, it's important to call `DeleteQuickConnect` to delete any records related to the deleted users. This will help you:
>
> - Avoid dangling resources that impact your service quotas.
> - Remove deleted users so they don't appear to agents as transfer options.
> - Avoid the disruption of other Amazon Connect processes, such as instance replication and syncing if you're using Amazon Connect Global Resiliency.

Request Syntax

```
DELETE /quick-connects/InstanceId/QuickConnectId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QuickConnectId

The identifier for the quick connect.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Python
- AWS SDK for Ruby V3

DeleteRoutingProfile

Service: Amazon Connect Service

Deletes a routing profile.

Request Syntax

```
DELETE /routing-profiles/InstanceId/RoutingProfileId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteRule

Service: Amazon Connect Service

Deletes a rule for the specified Amazon Connect instance.

Request Syntax

```
DELETE /rules/InstanceId/RuleId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RuleId

A unique identifier for the rule.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteSecurityProfile

Service: Amazon Connect Service

Deletes a security profile.

Request Syntax

```
DELETE /security-profiles/InstanceId/SecurityProfileId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

SecurityProfileId

The identifier for the security profle.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example,

DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteTaskTemplate

Service: Amazon Connect Service

Deletes the task template.

Request Syntax

```
DELETE /instance/InstanceId/task/template/TaskTemplateId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TaskTemplateId

A unique identifier for the task template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteTestCase

Service: Amazon Connect Service

Deletes the test case that has already been created for the specified Amazon Connect instance.

Request Syntax

```
DELETE /test-cases/InstanceId/TestCaseId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

TestCaseId

The identifier of the test case to delete.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteTrafficDistributionGroup

Service: Amazon Connect Service

Deletes a traffic distribution group. This API can be called only in the Region where the traffic distribution group is created.

For more information about deleting traffic distribution groups, see Delete traffic distribution groups in the *Amazon Connect Administrator Guide*.

Request Syntax

```
DELETE /traffic-distribution-group/TrafficDistributionGroupId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

TrafficDistributionGroupId

The identifier of the traffic distribution group. This can be the ID or the ARN of the traffic distribution group.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteUseCase

Service: Amazon Connect Service

Deletes a use case from an integration association.

Request Syntax

```
DELETE /instance/InstanceId/integration-associations/IntegrationAssociationId/use-cases/UseCaseId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

IntegrationAssociationId

The identifier for the integration association.

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

UseCaseId

The identifier for the use case.

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteUser

Service: Amazon Connect Service

Deletes a user account from the specified Amazon Connect instance.

For information about what happens to a user's data when their account is deleted, see Delete Users from Your Amazon Connect Instance in the *Amazon Connect Administrator Guide*.

> **Important**
>
> After calling DeleteUser, call DeleteQuickConnect to delete any records related to the deleted users. This will help you:
>
> - Avoid dangling resources that impact your service quotas.
> - Remove deleted users so they don't appear to agents as transfer options.
> - Avoid the disruption of other Amazon Connect processes, such as instance replication and syncing if you're using Amazon Connect Global Resiliency.

Request Syntax

```
DELETE /users/InstanceId/UserId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteUserHierarchyGroup

Service: Amazon Connect Service

Deletes an existing user hierarchy group. It must not be associated with any agents or have any active child groups.

Request Syntax

```
DELETE /user-hierarchy-groups/InstanceId/HierarchyGroupId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HierarchyGroupId

The identifier of the hierarchy group.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteView

Service: Amazon Connect Service

Deletes the view entirely. It deletes the view and all associated qualifiers (versions and aliases).

Request Syntax

```
DELETE /views/InstanceId/ViewId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

DeleteViewVersion

Service: Amazon Connect Service

Deletes the particular version specified in `ViewVersion` identifier.

Request Syntax

```
DELETE /views/InstanceId/ViewId/versions/ViewVersion HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

ViewVersion

The version number of the view.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

DeleteVocabulary

Service: Amazon Connect Service

Deletes the vocabulary that has the given identifier.

Request Syntax

```
POST /vocabulary-remove/InstanceId/VocabularyId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

VocabularyId

The identifier of the custom vocabulary.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "State": "string",
   "VocabularyArn": "string",
   "VocabularyId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

State

The current state of the custom vocabulary.

Type: String

Valid Values: `CREATION_IN_PROGRESS | ACTIVE | CREATION_FAILED | DELETE_IN_PROGRESS`

VocabularyArn

The Amazon Resource Name (ARN) of the custom vocabulary.

Type: String

VocabularyId

The identifier of the custom vocabulary.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteWorkspace

Service: Amazon Connect Service

Deletes a workspace and removes all associated view and resource assignments.

Request Syntax

```
DELETE /workspaces/InstanceId/WorkspaceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteWorkspaceMedia

Service: Amazon Connect Service

Deletes a media asset (such as a logo) from a workspace.

Request Syntax

```
DELETE /workspaces/InstanceId/WorkspaceId/media?mediaType=MediaType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MediaType

The type of media to delete. Valid values are: `IMAGE_LOGO_FAVICON` and `IMAGE_LOGO_HORIZONTAL`.

Valid Values: `IMAGE_LOGO_LIGHT_FAVICON | IMAGE_LOGO_DARK_FAVICON | IMAGE_LOGO_LIGHT_HORIZONTAL | IMAGE_LOGO_DARK_HORIZONTAL`

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteWorkspacePage

Service: Amazon Connect Service

Removes the association between a view and a page in a workspace. The page will display the default view after deletion.

Request Syntax

```
DELETE /workspaces/InstanceId/WorkspaceId/pages/Page HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Page

The page identifier.

Length Constraints: Minimum length of 1. Maximum length of 25.

Pattern: `^(?!\\.$)(?!\\.\\.$)[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]+$`

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeAgentStatus

Service: Amazon Connect Service

Describes an agent status.

Request Syntax

```
GET /agent-status/InstanceId/AgentStatusId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AgentStatusId

The identifier for the agent status.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AgentStatus": {
      "AgentStatusARN": "string",
      "AgentStatusId": "string",
      "Description": "string",
```

```
      "DisplayOrder": number,
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "State": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AgentStatus

The agent status.

Type: AgentStatus object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeAuthenticationProfile

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change. To request access to this API, contact Support.

Describes the target authentication profile.

Request Syntax

```
GET /authentication-profiles/InstanceId/AuthenticationProfileId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AuthenticationProfileId

A unique identifier for the authentication profile.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "AuthenticationProfile": {
      "AllowedIps": [ "string" ],
      "Arn": "string",
      "BlockedIps": [ "string" ],
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "IsDefault": boolean,
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "MaxSessionDuration": number,
      "Name": "string",
      "PeriodicSessionDuration": number,
      "SessionInactivityDuration": number,
      "SessionInactivityHandlingEnabled": boolean
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AuthenticationProfile

The authentication profile object being described.

Type: AuthenticationProfile object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeContact

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Describes the specified contact.

Use cases

Following are common uses cases for this API:

- Retrieve contact information such as the caller's phone number and the specific number the caller dialed to integrate into custom monitoring or custom agent experience solutions.
- Detect when a customer chat session disconnects due to a network issue on the agent's end. Use the DisconnectReason field in the ContactTraceRecord to detect this event and then re-queue the chat for followup.
- Identify after contact work (ACW) duration and call recordings information when a COMPLETED event is received by using the contact event stream.

Important things to know

- `SystemEndpoint` is not populated for contacts with initiation method of MONITOR, QUEUE_TRANSFER, or CALLBACK
- Contact information remains available in Amazon Connect for 24 months from the `InitiationTimestamp`, and then it is deleted. Only contact information that is available in Amazon Connect is returned by this API.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
GET /contacts/InstanceId/ContactId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Contact": {
      "AdditionalEmailRecipients": {
         "CcList": [
            {
               "Address": "string",
               "DisplayName": "string"
            }
         ],
         "ToList": [
            {
               "Address": "string",
               "DisplayName": "string"
            }
         ]
      },
      "AgentInfo": {
         "AcceptedByAgentTimestamp": number,
```

```
      "AfterContactWorkDuration": number,

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Contact

Information about the contact.

Type: Contact object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeContactEvaluation

Service: Amazon Connect Service

Describes a contact evaluation in the specified Amazon Connect instance.

Request Syntax

```
GET /contact-evaluations/InstanceId/EvaluationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationId

A unique identifier for the contact evaluation.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Evaluation

Information about the evaluation form completed for a specific contact.

Type: Evaluation object

EvaluationForm

Information about the evaluation form.

Type: EvaluationFormContent object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example describes a contact evaluation.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationId": "[evaluation_id]"
}
```

Sample Response

```
{
   "Evaluation": {
      "EvaluationId": "[evaluation_id]",
      "EvaluationArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/contact-evaluation/[evaluation_id]",
      "Metadata": {
         "ContactId": "[contact_id]",
         "EvaluatorArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/agent/arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "ContactAgentId": "[contact_agent_id]"
      },
      "Answers": {},
      "Notes": {},
      "Status": "DRAFT",
      "CreatedTime": "2023-05-04T01:16:29.693000-07:00",

DescribeContactFlow

Service: Amazon Connect Service

Describes the specified flow.

You can also create and update flows using the Amazon Connect Flow language.

Use the $SAVED alias in the request to describe the SAVED content of a Flow. For example, `arn:aws:.../contact-flow/{id}:$SAVED`. After a flow is published, $SAVED needs to be supplied to view saved content that has not been published.

Use `arn:aws:.../contact-flow/{id}:{version}` to retrieve the content of a specific flow version.

In the response, **Status** indicates the flow status as either SAVED or PUBLISHED. The PUBLISHED status will initiate validation on the content. SAVED does not initiate validation of the content. SAVED | PUBLISHED

Request Syntax

```
GET /contact-flows/InstanceId/ContactFlowId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlow": {
      "Arn": "string",
      "Content": "string",
      "Description": "string",
      "FlowContentSha256": "string",
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "State": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string",
      "Version": number,
      "VersionDescription": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlow

Information about the flow.

Type: ContactFlow object

Errors

For information about the errors that are common to all actions, see Common Errors.

ContactFlowNotPublishedException

The flow has not been published.

HTTP Status Code: 404

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeContactFlowModule

Service: Amazon Connect Service

Describes the specified flow module.

Use the $SAVED alias in the request to describe the SAVED content of a Flow. For example, `arn:aws:.../contact-flow/{id}:$SAVED`. After a flow is published, $SAVED needs to be supplied to view saved content that has not been published.

Request Syntax

```
GET /contact-flow-modules/InstanceId/ContactFlowModuleId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "ContactFlowModule": {
      "Arn": "string",
      "Content": "string",
      "Description": "string",
      "ExternalInvocationConfiguration": {
         "Enabled": boolean
      },
      "FlowModuleContentSha256": "string",
      "Id": "string",
      "Name": "string",
      "Settings": "string",
      "State": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Version": number,
      "VersionDescription": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModule

Information about the flow module.

Type: ContactFlowModule object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeContactFlowModuleAlias

Service: Amazon Connect Service

Retrieves detailed information about a specific alias, including which version it currently points to and its metadata.

Request Syntax

```
GET /contact-flow-modules/InstanceId/ContactFlowModuleId/alias/AliasId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AliasId

The identifier of the alias.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModuleAlias": {
      "AliasId": "string",
      "ContactFlowModuleArn": "string",
      "ContactFlowModuleId": "string",
      "Description": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Version": number
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModuleAlias

Information about the flow module alias.

Type: ContactFlowModuleAliasInfo object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Response

This example illustrates one usage of DescribeContactFlowModuleAlias.

```
{
  "ContactFlowModuleAlias": {
    "ContactFlowModuleId": "abcdefgh-1234-5678-9012-abcdefghijkl",
    "ContactFlowModuleArn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
    "AliasId": "production",
    "Version": 2,
    "Name": "production",
    "Description": "Production version of the customer service module",
    "LastModifiedRegion": "us-west-2",
    "LastModifiedTime": "2024-01-15T10:30:00.000Z"
  }
}
```

DescribeDataTable

Service: Amazon Connect Service

Returns all properties for a data table except for attributes and values. All properties from CreateDataTable are returned as well as properties for region replication, versioning, and system tables. "Describe" is a deprecated term but is allowed to maintain consistency with existing operations.

Request Syntax

```
GET /data-tables/InstanceId/DataTableId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias. If no alias is provided, the default behavior is identical to providing the $LATEST alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "DataTable": {
      "Arn": "string",
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "LockVersion": {
         "Attribute": "string",
         "DataTable": "string",
         "PrimaryValues": "string",
         "Value": "string"
      },
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "TimeZone": "string",
      "ValueLockLevel": "string",
      "Version": "string",
      "VersionDescription": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataTable

The complete data table information including metadata, configuration, and versioning details.

Type: DataTable object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeDataTableAttribute

Service: Amazon Connect Service

Returns detailed information for a specific data table attribute including its configuration, validation rules, and metadata. "Describe" is a deprecated term but is allowed to maintain consistency with existing operations.

Request Syntax

```
GET /data-tables/InstanceId/DataTableId/attributes/AttributeName HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AttributeName

The name of the attribute to retrieve detailed information for.

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Attribute": {
      "AttributeId": "string",
      "DataTableArn": "string",
      "DataTableId": "string",
      "Description": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "LockVersion": {
         "Attribute": "string",
         "DataTable": "string",
         "PrimaryValues": "string",
         "Value": "string"
      },
      "Name": "string",
      "Primary": boolean,
      "Validation": {
         "Enum": {
            "Strict": boolean,
            "Values": [ "string" ]
         },
         "ExclusiveMaximum": number,
         "ExclusiveMinimum": number,
         "IgnoreCase": boolean,
         "Maximum": number,
         "MaxLength": number,
         "MaxValues": number,
         "Minimum": number,
         "MinLength": number,
         "MinValues": number,
         "MultipleOf": number
      },
      "ValueType": "string",
      "Version": "string"
```

```
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Attribute

The complete attribute information including configuration, validation rules, lock version, and metadata.

Type: DataTableAttribute object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeEmailAddress

Service: Amazon Connect Service

Describe email address form the specified Amazon Connect instance.

Request Syntax

```
GET /email-addresses/InstanceId/EmailAddressId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EmailAddressId

The identifier of the email address.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AliasConfigurations": [
      {
```

```
            "EmailAddressId": "string"
         }
      ],
      "CreateTimestamp": "string",
      "Description": "string",
      "DisplayName": "string",
      "EmailAddress": "string",
      "EmailAddressArn": "string",
      "EmailAddressId": "string",
      "ModifiedTimestamp": "string",
      "Tags": {
         "string" : "string"
      }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AliasConfigurations

A list of alias configurations associated with this email address. Contains details about email addresses that forward to this primary email address. The list can contain at most one alias configuration per email address.

Type: Array of AliasConfiguration objects

Array Members: Maximum number of 1 item.

CreateTimestamp

The email address creation timestamp in ISO 8601 Datetime.

Type: String

Description

The description of the email address.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

DisplayName

The display name of email address

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

EmailAddress

The email address, including the domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `[^\s@]+@[^\s@]+\.[^\s@]+`

EmailAddressArn

The Amazon Resource Name (ARN) of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EmailAddressId

The identifier of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

ModifiedTimestamp

The email address last modification timestamp in ISO 8601 Datetime.

Type: String

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeEvaluationForm

Service: Amazon Connect Service

Describes an evaluation form in the specified Amazon Connect instance. If the version property is not provided, the latest version of the evaluation form is described.

Request Syntax

```
GET /evaluation-forms/InstanceId/EvaluationFormId?version=EvaluationFormVersion
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

A unique identifier for the contact evaluation.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

EvaluationFormVersion

A version of the evaluation form.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "EvaluationForm": {
      "AutoEvaluationConfiguration": {
         "Enabled": boolean
      },
      "CreatedBy": "string",
      "CreatedTime": number,
      "Description": "string",
      "EvaluationFormArn": "string",
      "EvaluationFormId": "string",
      "EvaluationFormVersion": number,
      "Items": [
         { ... }
      ],
      "LanguageConfiguration": {
         "FormLanguage": "string"
      },
      "LastModifiedBy": "string",
      "LastModifiedTime": number,
      "Locked": boolean,
      "ReviewConfiguration": {
         "EligibilityDays": number,
         "ReviewNotificationRecipients": [
            {
               "Type": "string",
               "Value": {
                  "UserId": "string"
               }
            }
         ]
      },
      "ScoringStrategy": {
         "Mode": "string",
         "Status": "string"
      },
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "TargetConfiguration": {
         "ContactInteractionType": "string"
      },
      "Title": "string"
```

```
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationForm

Information about the evaluation form.

Type: EvaluationForm object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example describes version 1 of an evaluation form.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormVersion": 1
}
```

Sample Response

```
{
   "EvaluationForm": {
      "EvaluationFormId": "[evaluation_form_id]",
      "EvaluationFormVersion": 1,
      "Locked": false,
      "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
      "Title": "form-title",
      "Description": "form-description",
      "Status": "DRAFT",
      "Items": [
         {
            "Section": {
               "Title": "section-title-1",
               "RefId": "section-1",
               "Instructions": "section-instruction-1",
               "Items": [
                  {
                     "Question": {
```

```
                        "Title": "question-title-11",
                        "Instructions": "question-instructions",
                        "RefId": "question-1-111",
                        "NotApplicableEnabled": false,
                        "QuestionType": "TEXT"
                     }
                  },
                  {
                     "Question": {

DescribeHoursOfOperation

Service: Amazon Connect Service

Describes the hours of operation.

Request Syntax

```
GET /hours-of-operations/InstanceId/HoursOfOperationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperation": {
      "Config": [
```

```
         {
            "Day": "string",
            "EndTime": {
               "Hours": number,
               "Minutes": number
            },
            "StartTime": {
               "Hours": number,
               "Minutes": number
            }
         }
      ],
      "Description": "string",
      "HoursOfOperationArn": "string",
      "HoursOfOperationId": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "ParentHoursOfOperations": [
         {
            "Arn": "string",
            "Id": "string",
            "Name": "string"
         }
      ],
      "Tags": {
         "string" : "string"
      },
      "TimeZone": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperation

The hours of operation.

Type: HoursOfOperation object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeHoursOfOperationOverride

Service: Amazon Connect Service

Describes the hours of operation override.

Request Syntax

```
GET /hours-of-operations/InstanceId/HoursOfOperationId/
overrides/HoursOfOperationOverrideId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

HoursOfOperationOverrideId

The identifier for the hours of operation override.

Length Constraints: Minimum length of 1. Maximum length of 36.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "HoursOfOperationOverride": {
      "Config": [
         {
            "Day": "string",
            "EndTime": {
               "Hours": number,
               "Minutes": number
            },

      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperationOverride

Information about the hours of operations override.

Type: HoursOfOperationOverride object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeInstance

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns the current state of the specified instance identifier. It tracks the instance while it is being created and returns an error status, if applicable.

If an instance is not created successfully, the instance status reason field returns details relevant to the reason. The instance in a failed state is returned only for 24 hours after the CreateInstance API was invoked.

Request Syntax

```
GET /instance/InstanceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Instance": {
      "Arn": "string",
      "CreatedTime": number,
```

```
      "Id": "string",
      "IdentityManagementType": "string",
      "InboundCallsEnabled": boolean,
      "InstanceAccessUrl": "string",
      "InstanceAlias": "string",
      "InstanceStatus": "string",
      "OutboundCallsEnabled": boolean,
      "ServiceRole": "string",
      "StatusReason": {
         "Message": "string"
      },
      "Tags": {
         "string" : "string"
      }
   },
   "ReplicationConfiguration": {
      "GlobalSignInEndpoint": "string",
      "ReplicationStatusSummaryList": [
         {
            "Region": "string",
            "ReplicationStatus": "string",
            "ReplicationStatusReason": "string"
         }
      ],
      "SourceRegion": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Instance

The name of the instance.

Type: Instance object

ReplicationConfiguration

Status information about the replication process. This field is included only when you are using the ReplicateInstance API to replicate an Amazon Connect instance across AWS Regions. For

information about replicating Amazon Connect instances, see Create a replica of your existing Amazon Connect instance in the *Amazon Connect Administrator Guide*.

Type: ReplicationConfiguration object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

DescribeInstanceAttribute

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Describes the specified instance attribute.

Request Syntax

```
GET /instance/InstanceId/attribute/AttributeType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AttributeType

The type of attribute.

Valid Values: `INBOUND_CALLS | OUTBOUND_CALLS | CONTACTFLOW_LOGS | CONTACT_LENS | AUTO_RESOLVE_BEST_VOICES | USE_CUSTOM_TTS_VOICES | EARLY_MEDIA | MULTI_PARTY_CONFERENCE | HIGH_VOLUME_OUTBOUND | ENHANCED_CONTACT_MONITORING | ENHANCED_CHAT_MONITORING | MULTI_PARTY_CHAT_CONFERENCE | MESSAGE_STREAMING`

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Attribute": {
      "AttributeType": "string",
      "Value": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Attribute

The type of attribute.

Type: Attribute object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeInstanceStorageConfig

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Retrieves the current storage configurations for the specified resource type, association ID, and instance ID.

Request Syntax

```
GET /instance/InstanceId/storage-config/AssociationId?resourceType=ResourceType
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ResourceType

A valid resource type.

Valid Values: `CHAT_TRANSCRIPTS | CALL_RECORDINGS | SCHEDULED_REPORTS | MEDIA_STREAMS | CONTACT_TRACE_RECORDS | AGENT_EVENTS | REAL_TIME_CONTACT_ANALYSIS_SEGMENTS | ATTACHMENTS | CONTACT_EVALUATIONS`

| SCREEN_RECORDINGS | REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS | REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS | EMAIL_MESSAGES

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "StorageConfig": {
      "AssociationId": "string",
      "KinesisFirehoseConfig": {
         "FirehoseArn": "string"
      },
      "KinesisStreamConfig": {
         "StreamArn": "string"
      },
      "KinesisVideoStreamConfig": {
         "EncryptionConfig": {
            "EncryptionType": "string",
            "KeyId": "string"
         },
         "Prefix": "string",
         "RetentionPeriodHours": number
      },
      "S3Config": {
         "BucketName": "string",
         "BucketPrefix": "string",
         "EncryptionConfig": {
            "EncryptionType": "string",
            "KeyId": "string"
         }
      },
      "StorageType": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

StorageConfig

A valid storage type.

Type: InstanceStorageConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeNotification

Service: Amazon Connect Service

Retrieves detailed information about a specific notification, including its content, priority, recipients, and metadata.

Request Syntax

```
GET /notifications/InstanceId/NotificationId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

NotificationId

The unique identifier for the notification.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Notification": {
      "Arn": "string",
```

```
      "Content": {
         "string" : "string"
      },
      "CreatedAt": number,
      "ExpiresAt": number,
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Priority": "string",
      "Recipients": [ "string" ],
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Notification

The complete notification information including content, priority, recipients, and metadata.

Type: Notification object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribePhoneNumber

Service: Amazon Connect Service

Gets details and status of a phone number that's claimed to your Amazon Connect instance or traffic distribution group.

> **Important**
>
> If the number is claimed to a traffic distribution group, and you are calling in the AWS Region where the traffic distribution group was created, you can use either a phone number ARN or UUID value for the `PhoneNumberId` URI request parameter. However, if the number is claimed to a traffic distribution group and you are calling this API in the alternate AWS Region associated with the traffic distribution group, you must provide a full phone number ARN. If a UUID is provided in this scenario, you receive a `ResourceNotFoundException`.

Request Syntax

```
GET /phone-number/PhoneNumberId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

PhoneNumberId

A unique identifier for the phone number.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "ClaimedPhoneNumberSummary": {
      "InstanceId": "string",
      "PhoneNumber": "string",
      "PhoneNumberArn": "string",
      "PhoneNumberCountryCode": "string",
      "PhoneNumberDescription": "string",
      "PhoneNumberId": "string",
      "PhoneNumberStatus": {
         "Message": "string",
         "Status": "string"
      },
      "PhoneNumberType": "string",
      "SourcePhoneNumberArn": "string",
      "Tags": {
         "string" : "string"
      },
      "TargetArn": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ClaimedPhoneNumberSummary

Information about a phone number that's been claimed to your Amazon Connect instance or traffic distribution group.

Type: ClaimedPhoneNumberSummary object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribePredefinedAttribute

Service: Amazon Connect Service

Describes a predefined attribute for the specified Amazon Connect instance. A *predefined attribute* is made up of a name and a value. You can use predefined attributes for:

- Routing proficiency (for example, agent certification) that has predefined values (for example, a list of possible certifications). For more information, see Create predefined attributes for routing contacts to agents.
- Contact information that varies between transfers or conferences, such as the name of the business unit handling the contact. For more information, see Use contact segment attributes.

For the predefined attributes per instance quota, see Amazon Connect quotas.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
GET /predefined-attributes/InstanceId/Name HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of the predefined attribute.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "PredefinedAttribute": {
      "AttributeConfiguration": {
         "EnableValueValidationOnAssociation": boolean,
         "IsReadOnly": boolean
      },
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Purposes": [ "string" ],
      "Values": { ... }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PredefinedAttribute

Information about the predefined attribute.

Type: PredefinedAttribute object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example shows a request and response.

```
GET https://connect.us-west-2.amazonaws.com/predefined-attributes/InstanceId/Name
 HTTP/1.1

Response:
{
    "PredefinedAttribute": {
        "AttributeConfiguration": {
            "EnableValueValidationOnAssociation": false,
            "IsReadOnly": false
        },
        "LastModifiedRegion": "us-west-2",
        "LastModifiedTime": 1.756932542054E9,
        "Name": "Custom",
        "Purposes": [
            "proficiency"
        ],
        "Values": {
            "StringList": [
                "value1",
                "value2"
            ]
        }
    }
}
```

DescribePrompt

Service: Amazon Connect Service

Describes the prompt.

Request Syntax

```
GET /prompts/InstanceId/PromptId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PromptId

A unique identifier for the prompt.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Prompt": {
      "Description": "string",
```

```
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "PromptARN": "string",
      "PromptId": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Prompt

Information about the prompt.

Type: Prompt object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

DescribeQueue

Service: Amazon Connect Service

Describes the specified queue.

Request Syntax

```
GET /queues/InstanceId/QueueId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Queue": {
      "Description": "string",
      "HoursOfOperationId": "string",
      "LastModifiedRegion": "string",
```

```
      "LastModifiedTime": number,
      "MaxContacts": number,
      "Name": "string",
      "OutboundCallerConfig": {
         "OutboundCallerIdName": "string",
         "OutboundCallerIdNumberId": "string",
         "OutboundFlowId": "string"
      },
      "OutboundEmailConfig": {
         "OutboundEmailAddressId": "string"
      },
      "QueueArn": "string",
      "QueueId": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Queue

The name of the queue.

Type: Queue object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeQuickConnect

Service: Amazon Connect Service

Describes the quick connect.

Request Syntax

```
GET /quick-connects/InstanceId/QuickConnectId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QuickConnectId

The identifier for the quick connect.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "QuickConnect": {
      "Description": "string",
```

```
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "QuickConnectARN": "string",
      "QuickConnectConfig": {
         "FlowConfig": {
            "ContactFlowId": "string"
         },
         "PhoneConfig": {
            "PhoneNumber": "string"
         },
         "QueueConfig": {
            "ContactFlowId": "string",
            "QueueId": "string"
         },
         "QuickConnectType": "string",
         "UserConfig": {
            "ContactFlowId": "string",
            "UserId": "string"
         }
      },
      "QuickConnectId": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

QuickConnect

Information about the quick connect.

Type: QuickConnect object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

DescribeRoutingProfile

Service: Amazon Connect Service

Describes the specified routing profile.

> **Note**
>
> `DescribeRoutingProfile` does not populate AssociatedQueueIds in its response. The example Response Syntax shown on this page is incorrect; we are working to update it. SearchRoutingProfiles does include AssociatedQueueIds.

Request Syntax

```
GET /routing-profiles/InstanceId/RoutingProfileId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "RoutingProfile": {
      "AgentAvailabilityTimer": "string",
      "AssociatedManualAssignmentQueueIds": [ "string" ],
      "AssociatedQueueIds": [ "string" ],
      "DefaultOutboundQueueId": "string",
      "Description": "string",

      "RoutingProfileArn": "string",
      "RoutingProfileId": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

RoutingProfile

The routing profile.

Type: RoutingProfile object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeRule

Service: Amazon Connect Service

Describes a rule for the specified Amazon Connect instance.

Request Syntax

```
GET /rules/InstanceId/RuleId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RuleId

A unique identifier for the rule.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Rule": {
      "Actions": [
         {
```

```
            "ActionType": "string",
            "AssignContactCategoryAction": {
            },
            "AssignSlaAction": {
               "CaseSlaConfiguration": {
                  "FieldId": "string",
                  "Name": "string",
                  "TargetFieldValues": [
                     {
                        "BooleanValue": boolean,
                        "DoubleValue": number,
                        "EmptyValue": {
                        },
                        "StringValue": "string"
                     }
                  ],
                  "TargetSlaMinutes": number,
                  "Type": "string"
               },
               "SlaAssignmentType": "string"
            },

          "EventSourceName": "string",
          "IntegrationAssociationId": "string"
       }
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Rule

Information about the rule.

Type: Rule object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeSecurityProfile

Service: Amazon Connect Service

Gets basic information about the security profile.

For information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
GET /security-profiles/InstanceId/SecurityProfileId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

SecurityProfileId

The identifier for the security profle.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "SecurityProfile": {
      "AllowedAccessControlHierarchyGroupId": "string",
      "AllowedAccessControlTags": {
         "string" : "string"
      },
      "Arn": "string",
      "Description": "string",
      "GranularAccessControlConfiguration": {
         "DataTableAccessControlConfiguration": {
            "PrimaryAttributeAccessControlConfiguration": {
               "PrimaryAttributeValues": [
                  {
                     "AccessType": "string",
                     "AttributeName": "string",
                     "Values": [ "string" ]
                  }
               ]
            }
         }
      },
      "HierarchyRestrictedResources": [ "string" ],
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "OrganizationResourceId": "string",
      "SecurityProfileName": "string",
      "TagRestrictedResources": [ "string" ],
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

SecurityProfile

The security profile.

Type: SecurityProfile object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeTestCase

Service: Amazon Connect Service

Describes the specified test case and allows you to get the content and metadata of the test case for the specified Amazon Connect instance.

Request Syntax

```
GET /test-cases/InstanceId/TestCaseId?status=Status HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Status

The status of the test case version to retrieve. If not specified, returns the published version if available, otherwise returns the saved version.

Valid Values: `PUBLISHED | SAVED`

TestCaseId

The identifier of the test case.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "TestCase": {
      "Arn": "string",
      "Content": "string",
      "Description": "string",
      "EntryPoint": {
         "ChatEntryPointParameters": {
            "FlowId": "string"
         },
         "Type": "string",
         "VoiceCallEntryPointParameters": {
            "DestinationPhoneNumber": "string",
            "FlowId": "string",
            "SourcePhoneNumber": "string"
         }
      },
      "Id": "string",
      "InitializationData": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "TestCaseSha256": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

TestCase

The test case object containing all test case information.

Type: TestCase object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeTrafficDistributionGroup

Service: Amazon Connect Service

Gets details and status of a traffic distribution group.

Request Syntax

```
GET /traffic-distribution-group/TrafficDistributionGroupId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

TrafficDistributionGroupId

The identifier of the traffic distribution group. This can be the ID or the ARN if the API is being called in the Region where the traffic distribution group was created. The ARN must be provided if the call is from the replicated Region.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "TrafficDistributionGroup": {
      "Arn": "string",
      "Description": "string",
      "Id": "string",
      "InstanceArn": "string",
```

```
      "IsDefault": boolean,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

TrafficDistributionGroup

Information about the traffic distribution group.

Type: TrafficDistributionGroup object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

DescribeUser

Service: Amazon Connect Service

Describes the specified user. You can find the instance ID in the Amazon Connect console (it's the final part of the ARN). The console does not display the user IDs. Instead, list the users and note the IDs provided in the output.

Request Syntax

```
GET /users/InstanceId/UserId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "User": {
      "AfterContactWorkConfigs": [
```

```
            {
               "AfterContactWorkConfig": {
                  "AfterContactWorkTimeLimit": number
               },
               "AgentFirstCallbackAfterContactWorkConfig": {
                  "AfterContactWorkTimeLimit": number
               },
               "Channel": "string"
            }
         ],
         "Arn": "string",
         "AutoAcceptConfigs": [
            {
               "AgentFirstCallbackAutoAccept": boolean,
               "AutoAccept": boolean,
               "Channel": "string"
            }
         ],
         "DirectoryUserId": "string",
         "HierarchyGroupId": "string",
         "Id": "string",
         "IdentityInfo": {
            "Email": "string",
            "FirstName": "string",
            "LastName": "string",
            "Mobile": "string",
            "SecondaryEmail": "string"
         },
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "PersistentConnectionConfigs": [
            {
               "Channel": "string",
               "PersistentConnection": boolean
            }
         ],
         "PhoneConfig": {
            "AfterContactWorkTimeLimit": number,
            "AutoAccept": boolean,
            "DeskPhoneNumber": "string",
            "PersistentConnection": boolean,
            "PhoneType": "string"
         },
         "PhoneNumberConfigs": [
```

```
         {
            "Channel": "string",
            "PhoneNumber": "string",
            "PhoneType": "string"
         }
      ],
      "RoutingProfileId": "string",
      "SecurityProfileIds": [ "string" ],
      "Tags": {
         "string" : "string"
      },
      "Username": "string",
      "VoiceEnhancementConfigs": [
         {
            "Channel": "string",
            "VoiceEnhancementMode": "string"
         }
      ]
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

User

Information about the user account and configuration settings.

Type: User object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeUserHierarchyGroup

Service: Amazon Connect Service

Describes the specified hierarchy group.

Request Syntax

```
GET /user-hierarchy-groups/InstanceId/HierarchyGroupId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HierarchyGroupId

The identifier of the hierarchy group.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HierarchyGroup": {
      "Arn": "string",
      "HierarchyPath": {
         "LevelFive": {
            "Arn": "string",
```

```
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelFour": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelOne": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelThree": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelTwo": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         }
      },
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "LevelId": "string",
      "Name": "string",
      "Tags": {
         "string" : "string"
      }
   }
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HierarchyGroup

Information about the hierarchy group.

Type: HierarchyGroup object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeUserHierarchyStructure

Service: Amazon Connect Service

Describes the hierarchy structure of the specified Amazon Connect instance.

Request Syntax

```
GET /user-hierarchy-structure/InstanceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HierarchyStructure": {
      "LevelFive": {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      },
```

```
      "LevelFour": {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      },
      "LevelOne": {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      },
      "LevelThree": {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      },
      "LevelTwo": {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HierarchyStructure

Information about the hierarchy structure.

Type: HierarchyStructure object

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeView

Service: Amazon Connect Service

Retrieves the view for the specified Amazon Connect instance and view identifier.

The view identifier can be supplied as a ViewId or ARN.

$SAVED needs to be supplied if a view is unpublished.

The view identifier can contain an optional qualifier, for example, <view-id>:$SAVED, which is either an actual version number or an Amazon Connect managed qualifier $SAVED | $LATEST. If it is not supplied, then $LATEST is assumed for customer managed views and an error is returned if there is no published content available. Version 1 is assumed for AWS managed views.

Request Syntax

```
GET /views/InstanceId/ViewId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: ^[a-zA-Z0-9_\-:\/]+$

Required: Yes

ViewId

The ViewId of the view. This must be an ARN for AWS managed views.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: ^[a-zA-Z0-9_\-:\/$]+$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "View": {
      "Arn": "string",
      "Content": {
         "Actions": [ "string" ],
         "InputSchema": "string",
         "Template": "string"
      },
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string",
      "Version": number,
      "VersionDescription": "string",
      "ViewContentSha256": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

View

All view data is contained within the View object.

Type: View object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

DescribeVocabulary

Service: Amazon Connect Service

Describes the specified vocabulary.

Request Syntax

```
GET /vocabulary/InstanceId/VocabularyId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

VocabularyId

The identifier of the custom vocabulary.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Vocabulary": {
      "Arn": "string",
```

```
      "Content": "string",
      "FailureReason": "string",
      "Id": "string",
      "LanguageCode": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "State": "string",
      "Tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Vocabulary

A list of specific words that you want Contact Lens for Amazon Connect to recognize in your audio input. They are generally domain-specific words and phrases, words that Contact Lens is not recognizing, or proper nouns.

Type: Vocabulary object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeWorkspace

Service: Amazon Connect Service

Retrieves details about a workspace, including its configuration and metadata.

Request Syntax

```
GET /workspaces/InstanceId/WorkspaceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Workspace": {
      "Arn": "string",
      "Description": "string",
```

```
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Tags": {
         "string" : "string"
      },
      "Theme": {
         "Dark": {
            "Images": {
               "Logo": {
                  "Default": "string",
                  "Favicon": "string"
               }
            },
            "Palette": {
               "Canvas": {
                  "ActiveBackground": "string",
                  "ContainerBackground": "string",
                  "PageBackground": "string"
               },
               "Header": {
                  "Background": "string",
                  "InvertActionsColors": boolean,
                  "Text": "string",
                  "TextHover": "string"
               },
               "Navigation": {
                  "Background": "string",
                  "InvertActionsColors": boolean,
                  "Text": "string",
                  "TextActive": "string",
                  "TextBackgroundActive": "string",
                  "TextBackgroundHover": "string",
                  "TextHover": "string"
               },
               "Primary": {
                  "Active": "string",
                  "ContrastText": "string",
                  "Default": "string"
               }
            },
            "Typography": {
               "FontFamily": {
```

```
            "Default": "string"
         }
      }
   },
   "Light": {
      "Images": {
         "Logo": {
            "Default": "string",
            "Favicon": "string"
         }
      },
      "Palette": {
         "Canvas": {
            "ActiveBackground": "string",
            "ContainerBackground": "string",
            "PageBackground": "string"
         },
         "Header": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextHover": "string"
         },
         "Navigation": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextActive": "string",
            "TextBackgroundActive": "string",
            "TextBackgroundHover": "string",
            "TextHover": "string"
         },
         "Primary": {
            "Active": "string",
            "ContrastText": "string",
            "Default": "string"
         }
      },
      "Typography": {
         "FontFamily": {
            "Default": "string"
         }
      }
   }
```

```
      },
      "Title": "string",
      "Visibility": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Workspace

Information about the workspace.

Type: Workspace object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateAnalyticsDataSet

Service: Amazon Connect Service

Removes the dataset ID associated with a given Amazon Connect instance.

Request Syntax

```
POST /analytics-data/instance/InstanceId/association HTTP/1.1
Content-type: application/json

{
   "DataSetId": "string",
   "TargetAccountId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

DataSetId

The identifier of the dataset to remove.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

TargetAccountId

The identifier of the target account. Use to associate a dataset to a different account than the one containing the Amazon Connect instance. If not specified, by default this value is the AWS account that has the Amazon Connect instance.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateApprovedOrigin

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Revokes access to integrated applications from Amazon Connect.

Request Syntax

```
DELETE /instance/InstanceId/approved-origin?clientToken=ClientToken&origin=Origin
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Origin

The domain URL of the integrated application.

Length Constraints: Maximum length of 267.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Ruby V3

DisassociateBot

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Revokes authorization from the specified instance to access the specified Amazon Lex or Amazon Lex V2 bot.

Request Syntax

```
POST /instance/InstanceId/bot HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "LexBot": {
      "LexRegion": "string",
      "Name": "string"
   },
   "LexV2Bot": {
      "AliasArn": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

LexBot

Configuration information of an Amazon Lex bot.

Type: LexBot object

Required: No

LexV2Bot

The Amazon Lex V2 bot to disassociate from the instance.

Type: LexV2Bot object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateEmailAddressAlias

Service: Amazon Connect Service

Removes the alias association between two email addresses in an Amazon Connect instance. After disassociation, emails sent to the former alias email address are no longer forwarded to the primary email address. Both email addresses continue to exist independently and can receive emails directly.

Use cases

Following are common uses cases for this API:

- **Department separation**: Remove alias relationships when splitting a consolidated support queue back into separate department-specific queues.
- **Email address retirement**: Cleanly remove forwarding relationships before decommissioning old email addresses.
- **Organizational restructuring**: Reconfigure email routing when business processes change and aliases are no longer needed.

Important things to know

- Concurrent operations: This API uses distributed locking, so concurrent operations on the same email addresses may be temporarily blocked.
- Emails sent to the former alias address are still delivered directly to that address if it exists.
- You do not need to delete the email addresses after disassociation. Both addresses remain active independently.
- After a successful disassociation, you can immediately create a new alias relationship with the same addresses.
- 200 status means alias was successfully disassociated.

`DisassociateEmailAddressAlias` does not return the following information:

- Details in the response about the email that was disassociated. The response returns an empty body.
- The timestamp of when the disassociation occurred.

Endpoints: See Amazon Connect endpoints and quotas.

Related operations

- AssociateEmailAddressAlias: Associates an email address alias with an existing email address in an Amazon Connect instance.
- DescribeEmailAddress: View current alias configurations for an email address.
- SearchEmailAddresses: Find email addresses and their alias relationships across an instance.
- CreateEmailAddress: Create new email addresses that can participate in alias relationships.
- DeleteEmailAddress: Remove email addresses (automatically removes any alias relationships).
- UpdateEmailAddressMetadata: Modify email address properties (does not affect alias relationships).

Request Syntax

```
POST /email-addresses/InstanceId/EmailAddressId/disassociate-alias HTTP/1.1
Content-type: application/json

{
   "AliasConfiguration": {
      "EmailAddressId": "string"
   },
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

EmailAddressId

The identifier of the email address.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AliasConfiguration

Configuration object that specifies which alias relationship to remove. The alias association must currently exist between the primary email address and the specified alias email address.

Type: AliasConfiguration object

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example 1: Basic alias removal

The following example removes the forwarding relationship between two email addresses.

```
POST / HTTP/1.1
Host: connect.us-east-1.amazonaws.com
Content-Length: 156
X-Amz-Target: AmazonConnectService.DisassociateEmailAddressAlias
X-Amz-Date: 20170705T211529Z
Authorization: AWS4-HMAC-SHA256\
 Credential=AKIAI44QH8DHBEXAMPLE/20170705/us-east-1/connect/aws4_request,\
 SignedHeaders=content-type;host;x-amz-date;x-amz-target,\
 Signature=6bcb6a5ef9ee7585d83955e8a5c3f6d47cf581596208fc0e436fa1de26ef3f6a
Content-Type: application/x-amz-json-1.1
{
    "InstanceId": "12345678-1234-1234-1234-123456789012",
    "EmailAddressId": "87654321-4321-4321-4321-210987654321",
    "AliasConfiguration": {
        "EmailAddressId": "11111111-2222-3333-4444-555555555555"
    }
}
```

Example 2: Alias removal with error handling

The following example response shows a safely removed alias with proper error handling for non-existent relationships.

```
HTTP/1.1 200 OK
Date: Wed, 05 Jul 2017 21:15:29 GMT
```

```
Content-Type: application/x-amz-json-1.1
Content-Length: 2
Connection: keep-alive
x-amzn-RequestId: 12345678-1234-1234-1234-123456789012
{}
```

DisassociateFlow

Service: Amazon Connect Service

Disassociates a connect resource from a flow.

Request Syntax

```
DELETE /flow-associations/InstanceId/ResourceId/ResourceType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ResourceId

The identifier of the resource.

- AWS End User Messaging SMS phone number ARN when using `SMS_PHONE_NUMBER`
- AWS End User Messaging Social phone number ARN when using `WHATSAPP_MESSAGING_PHONE_NUMBER`

Required: Yes

ResourceType

A valid resource type.

Valid Values: `SMS_PHONE_NUMBER | INBOUND_EMAIL | OUTBOUND_EMAIL | ANALYTICS_CONNECTOR | WHATSAPP_MESSAGING_PHONE_NUMBER`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateHoursOfOperations

Service: Amazon Connect Service

Disassociates a set of hours of operations with another hours of operation. Refer to Administrator Guide here for more information on inheriting overrides from parent hours of operation(s).

Request Syntax

```
POST /hours-of-operations/InstanceId/HoursOfOperationId/disassociate-hours HTTP/1.1
Content-type: application/json

{
   "ParentHoursOfOperationIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier of the child hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ParentHoursOfOperationIds

The Amazon Resource Names (ARNs) of the parent hours of operation resources to disassociate with the child hours of operation resource.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 3 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateInstanceStorageConfig

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Removes the storage type configurations for the specified resource type and association ID.

Request Syntax

```
DELETE /instance/InstanceId/storage-config/AssociationId?
clientToken=ClientToken&resourceType=ResourceType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ResourceType

A valid resource type.

Valid Values: CHAT_TRANSCRIPTS | CALL_RECORDINGS | SCHEDULED_REPORTS | MEDIA_STREAMS | CONTACT_TRACE_RECORDS | AGENT_EVENTS | REAL_TIME_CONTACT_ANALYSIS_SEGMENTS | ATTACHMENTS | CONTACT_EVALUATIONS | SCREEN_RECORDINGS | REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS | REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS | EMAIL_MESSAGES

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateLambdaFunction

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Remove the Lambda function from the dropdown options available in the relevant flow blocks.

Request Syntax

```
DELETE /instance/InstanceId/lambda-function?
clientToken=ClientToken&functionArn=FunctionArn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

FunctionArn

The Amazon Resource Name (ARN) of the Lambda function being disassociated.

Length Constraints: Minimum length of 1. Maximum length of 140.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance..

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateLexBot

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Revokes authorization from the specified instance to access the specified Amazon Lex bot.

Request Syntax

```
DELETE /instance/InstanceId/lex-bot?
botName=BotName&clientToken=ClientToken&lexRegion=LexRegion HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

BotName

The name of the Amazon Lex bot. Maximum character limit of 50.

Length Constraints: Maximum length of 50.

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

LexRegion

The AWS Region in which the Amazon Lex bot has been created.

Length Constraints: Maximum length of 60.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociatePhoneNumberContactFlow

Service: Amazon Connect Service

Removes the flow association from a phone number claimed to your Amazon Connect instance.

> **Important**
>
> If the number is claimed to a traffic distribution group, and you are calling this API using an instance in the AWS Region where the traffic distribution group was created, you can use either a full phone number ARN or UUID value for the `PhoneNumberId` URI request parameter. However, if the number is claimed to a traffic distribution group and you are calling this API using an instance in the alternate AWS Region associated with the traffic distribution group, you must provide a full phone number ARN. If a UUID is provided in this scenario, you will receive a `ResourceNotFoundException`.

Request Syntax

```
DELETE /phone-number/PhoneNumberId/contact-flow?instanceId=InstanceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PhoneNumberId

A unique identifier for the phone number.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateQueueEmailAddresses

Service: Amazon Connect Service

Removes the association between a set of email addresses and a queue. After disassociation, agents will no longer be able to select these email addresses as "From" addresses when replying to inbound email contacts or initiating outbound email contacts in this queue.

Important things to know

- Agents will no longer see these email addresses in their "From" address selection options for this queue.
- The email addresses themselves are not deleted from the instance, only their availability for agent selection in this queue is removed.
- Changes take effect immediately and will affect the agent experience in the Contact Control Panel (CCP).

Request Syntax

```
POST /queues/InstanceId/QueueId/disassociate-email-addresses HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "EmailAddressesId": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

EmailAddressesId

List of email address identifiers to disassociate from the queue. These are the unique identifiers of email addresses that should no longer be routed to this queue.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateQueueQuickConnects

Service: Amazon Connect Service

Disassociates a set of quick connects from a queue.

Request Syntax

```
POST /queues/InstanceId/QueueId/disassociate-quick-connects HTTP/1.1
Content-type: application/json

{
   "QuickConnectIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

QuickConnectIds

The quick connects to disassociate from the queue.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateRoutingProfileQueues

Service: Amazon Connect Service

Disassociates a set of queues from a routing profile.

Up to 10 queue references can be disassociated in a single API call. More than 10 queue references results in a single call results in an InvalidParameterException.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/disassociate-queues HTTP/1.1
Content-type: application/json

{
   "ManualAssignmentQueueReferences": [
      {
         "Channel": "string",
         "QueueId": "string"
      }
   ],
   "QueueReferences": [
      {
         "Channel": "string",
         "QueueId": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ManualAssignmentQueueReferences

The manual assignment queues to disassociate with this routing profile.

Type: Array of RoutingProfileQueueReference objects

Required: No

QueueReferences

The queues to disassociate from this routing profile.

Type: Array of RoutingProfileQueueReference objects

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateSecurityKey

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Deletes the specified security key.

Request Syntax

```
DELETE /instance/InstanceId/security-key/AssociationId?clientToken=ClientToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DisassociateSecurityProfiles

Service: Amazon Connect Service

Disassociates a security profile attached to a Q in Connect AI Agent Entity in an Amazon Connect instance.

Request Syntax

```
POST /disassociate-security-profiles/InstanceId HTTP/1.1
Content-type: application/json

{
   "EntityArn": "string",
   "EntityType": "string",
   "SecurityProfiles": [
      {
         "Id": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EntityArn

ARN of a Q in Connect AI Agent.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

EntityType

Only supported type is AI_AGENT.

Type: String

Valid Values: `USER | AI_AGENT`

Required: Yes

SecurityProfiles

List of Security Profile Object.

Type: Array of SecurityProfileItem objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

DisassociateTrafficDistributionGroupUser

Service: Amazon Connect Service

Disassociates an agent from a traffic distribution group. This API can be called only in the Region where the traffic distribution group is created.

Request Syntax

```
DELETE /traffic-distribution-group/TrafficDistributionGroupId/user?
InstanceId=InstanceId&UserId=UserId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TrafficDistributionGroupId

The identifier of the traffic distribution group. This can be the ID or the ARN of the traffic distribution group.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

UserId

The identifier for the user. This can be the ID or the ARN of the user.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example disassociates an agent from a traffic distribution group.

Sample Request

```
DELETE connect.[region].amazonaws.com/traffic-distribution-group/
[traffic_distribution_group_id]/user?instanceId=[instance_id]&userId=[user_id]
{
}
```

Sample Response

```
{}
```

DisassociateUserProficiencies

Service: Amazon Connect Service

Disassociates a set of proficiencies from a user.

Request Syntax

```
POST /users/InstanceId/UserId/disassociate-proficiencies HTTP/1.1
Content-type: application/json

{
   "UserProficiencies": [
      {
         "AttributeName": "string",
         "AttributeValue": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

UserProficiencies

The proficiencies to disassociate from the user.

Type: Array of UserProficiencyDisassociate objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Ruby V3

DisassociateWorkspace

Service: Amazon Connect Service

Removes the association between a workspace and one or more users or routing profiles.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/disassociate HTTP/1.1
Content-type: application/json

{
   "ResourceArns": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ResourceArns

The Amazon Resource Names (ARNs) of the resources to disassociate from the workspace.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FailedList": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string",
         "ResourceArn": "string"
      }
   ],
   "SuccessfulList": [
      {
         "ResourceArn": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FailedList

A list of resources that failed to be disassociated from the workspace, including error details.

Type: Array of FailedBatchAssociationSummary objects

SuccessfulList

A list of resources that were successfully disassociated from the workspace.

Type: Array of SuccessfulBatchAssociationSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DismissUserContact

Service: Amazon Connect Service

Dismisses contacts from an agent's CCP and returns the agent to an available state, which allows the agent to receive a new routed contact. Contacts can only be dismissed if they are in a `MISSED`, `ERROR`, `ENDED`, or `REJECTED` state in the Agent Event Stream.

Request Syntax

```
POST /users/InstanceId/UserId/contact HTTP/1.1
Content-type: application/json

{
   "ContactId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

EvaluateDataTableValues

Service: Amazon Connect Service

Evaluates values at the time of the request and returns them. It considers the request's timezone or the table's timezone, in that order, when accessing time based tables. When a value is accessed, the accessor's identity and the time of access are saved alongside the value to help identify values that are actively in use. The term "Batch" is not included in the operation name since it does not meet all the criteria for a batch operation as specified in Batch Operations: AWS API Standards.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/evaluate?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
Content-type: application/json

{
   "TimeZone": "string",
   "Values": [
      {
         "AttributeNames": [ "string" ],
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ]
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data table values to return in one page of results.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Request Body

The request accepts the following data in JSON format.

TimeZone

Optional IANA timezone identifier to use when resolving time based dynamic values. Defaults to the data table time zone if not provided.

Type: String

Required: No

Values

A list of value evaluation sets specifying which primary values and attributes to evaluate.

Type: Array of DataTableValueEvaluationSet objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NextToken": "string",
   "Values": [
      {
         "AttributeName": "string",
         "Error": boolean,
         "EvaluatedValue": "string",
         "Found": boolean,
         "PrimaryValues": [
            {
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "RecordId": "string",
         "ValueType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Values

A list of evaluated values with their computed results, error information, and metadata.

Type: Array of DataTableEvaluatedValue objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

GetAttachedFile

Service: Amazon Connect Service

Provides a pre-signed URL for download of an approved attached file. This API also returns metadata about the attached file. It will only return a downloadURL if the status of the attached file is APPROVED.

Request Syntax

```
GET /attached-files/InstanceId/FileId?
associatedResourceArn=AssociatedResourceArn&urlExpiryInSeconds=UrlExpiryInSeconds
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. The supported resources are Cases and Email.

> **Note**
>
> This value must be a valid ARN.

Required: Yes

FileId

The unique identifier of the attached file resource.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UrlExpiryInSeconds

Optional override for the expiry of the pre-signed S3 URL in seconds. The default value is 300.

Valid Range: Minimum value of 5. Maximum value of 300.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AssociatedResourceArn": "string",
   "CreatedBy": { ... },
   "CreationTime": "string",
   "DownloadUrlMetadata": {
      "Url": "string",
      "UrlExpiry": "string"
   },
   "FileArn": "string",
   "FileId": "string",
   "FileName": "string",
   "FileSizeInBytes": number,
   "FileStatus": "string",
   "FileUseCaseType": "string",
   "Tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. Cases are the only current supported resource.

Type: String

CreatedBy

Represents the identity that created the file.

Type: CreatedByInfo object

Note: This object is a Union. Only one member of this object can be specified or returned.

CreationTime

The time of Creation of the file resource as an ISO timestamp. It's specified in ISO 8601 format: `yyyy-MM-ddThh:mm:ss.SSSZ`. For example, `2024-05-03T02:41:28.172Z`.

Type: String

DownloadUrlMetadata

URL and expiry to be used when downloading the attached file.

Type: DownloadUrlMetadata object

FileArn

The unique identifier of the attached file resource (ARN).

Type: String

FileId

The unique identifier of the attached file resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

FileName

A case-sensitive name of the attached file being uploaded.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `^\P{C}*$`

FileSizeInBytes

The size of the attached file in bytes.

Type: Long

Valid Range: Minimum value of 1.

FileStatus

The current status of the attached file.

Type: String

Valid Values: `APPROVED | REJECTED | PROCESSING | FAILED`

FileUseCaseType

The use case for the file.

Type: String

Valid Values: `EMAIL_MESSAGE | ATTACHMENT`

Tags

The tags used to organize, track, or control access for this resource. For example, `{ "Tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetContactAttributes

Service: Amazon Connect Service

Retrieves the contact attributes for the specified contact.

Request Syntax

```
GET /contact/attributes/InstanceId/InitialContactId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InitialContactId

The identifier of the initial contact.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Attributes": {
      "string" : "string"
   }
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Attributes

Information about the attributes.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

GetContactMetrics

Service: Amazon Connect Service

Retrieves contact metric data for a specified contact.

Use cases

Following are common use cases for position in queue and estimated wait time:

- Customer-Facing Wait Time Announcements - Display or announce the estimated wait time and position in queue to customers before or during their queue experience.
- Callback Offerings - Offer customers a callback option when the estimated wait time or position in queue exceeds a defined threshold.
- Queue Routing Decisions - Route incoming contacts to less congested queues by comparing estimated wait time and position in queue across multiple queues.
- Self-Service Deflection - Redirect customers to self-service options like chatbots or FAQs when estimated wait time is high or position in queue is unfavorable.

Important things to know

- Metrics are only available while the contact is actively in queue.
- For more information, see the Position in queue metric in the *Amazon Connect Administrator Guide*.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /metrics/contact HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string",
   "Metrics": [
      {
         "Name": "string"
      }
   ]
```

```
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Metrics

A list of contact level metrics to retrieve.Supported metrics include POSITION_IN_QUEUE (the contact's current position in the queue) and ESTIMATED_WAIT_TIME (the predicted time in seconds until the contact is connected to an agent)

Type: Array of ContactMetricInfo objects

Array Members: Minimum number of 1 item.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Id": "string",
   "MetricResults": [
      {
         "Name": "string",
         "Value": { ... }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The ARN of the contact for which metrics were retrieved.

Type: String

Id

The unique identifier of the contact for which metrics were retrieved. This matches the ContactId provided in the request.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

MetricResults

A list of metric results containing the calculated values for each requested metric. Each result includes the metric name and its corresponding value. For example, POSITION_IN_QUEUE returns a numeric value representing the contact's position in queue, and ESTIMATED_WAIT_TIME returns the predicted wait time in seconds.

Type: Array of ContactMetricResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example request to retrieve position in queue and estimated wait time

Following is an example of retrieving the position in queue and estimated wait time for a contact.

```
{
     "InstanceId":"12345678-1234-5678-aabb-123456abcdef",
     "ContactId":"12345678-1234-5678-aabb-123456abcdef",
     "Metrics":[ { "Name": "POSITION_IN_QUEUE"}, { "Name": "ESTIMATED_WAIT_TIME"} ]
     }
```

Example response with the position in queue and estimated wait time

Following is an example response. In this case, the contact is number 3 in the queue with an estimated wait time of 120 seconds.

```
{
     "Id":"12345678-1234-5678-aabb-123456abcdef",
     "Arn":"arn:aws:connect:us-east-1:123456789012:instance/12345678-1234-5678-
aabb-123456abcdef/contact/12345678-1234-5678-aabb-123456abcdef",
```

```
    "MetricResults":[ { "Name": "POSITION_IN_QUEUE","Value":{"Number":3.00}},
{ "Name": "ESTIMATED_WAIT_TIME","Value":{"Number":120.00}}]
    }
```

GetCurrentMetricData

Service: Amazon Connect Service

Gets the real-time metric data from the specified Amazon Connect instance.

For a description of each metric, see Metrics definitions in the *Amazon Connect Administrator Guide*.

> **Note**
>
> When you make a successful API request, you can expect the following metric values in the response:
>
> 1. **Metric value is null**: The calculation cannot be performed due to divide by zero or insufficient data
> 2. **Metric value is a number (including 0) of defined type**: The number provided is the calculation result
> 3. **MetricResult list is empty**: The request cannot find any data in the system
>
> The following guidelines can help you work with the API:
>
> - Each dimension in the metric response must contain a value
> - Each item in MetricResult must include all requested metrics
> - If the response is slow due to large result sets, try these approaches:
>   - Add filters to reduce the amount of data returned

Request Syntax

```
POST /metrics/current/InstanceId HTTP/1.1
Content-type: application/json

{
   "CurrentMetrics": [
      {
         "MetricId": "string",
         "Name": "string",
         "Unit": "string"
      }
   ],
```

```
   "Filters": {
      "AgentStatuses": [ "string" ],
      "Channels": [ "string" ],
      "Queues": [ "string" ],
      "RoutingProfiles": [ "string" ],
      "RoutingStepExpressions": [ "string" ],
      "Subtypes": [ "string" ],
      "ValidationTestTypes": [ "string" ]
   },
   "Groupings": [ "string" ],
   "MaxResults": number,
   "NextToken": "string",
   "SortCriteria": [
      {
         "SortByMetric": "string",
         "SortOrder": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

CurrentMetrics

The metrics to retrieve. Specify the name or metricId, and unit for each metric. The following metrics are available. For a description of all the metrics, see Metrics definitions in the *Amazon Connect Administrator Guide*.

> **Note**
>
> MetricId should be used to reference custom metrics or out of the box metrics as Arn. If using MetricId, the limit is 10 MetricId per request.

AGENTS_AFTER_CONTACT_WORK

Unit: COUNT

Name in real-time metrics report: ACW

AGENTS_AVAILABLE

Unit: COUNT

Name in real-time metrics report: Available

AGENTS_ERROR

Unit: COUNT

Name in real-time metrics report: Error

AGENTS_NON_PRODUCTIVE

Unit: COUNT

Name in real-time metrics report: NPT (Non-Productive Time)

AGENTS_ON_CALL

Unit: COUNT

Name in real-time metrics report: On contact

AGENTS_ON_CONTACT

Unit: COUNT

Name in real-time metrics report: On contact

AGENTS_ONLINE

Unit: COUNT

Name in real-time metrics report: Online

AGENTS_STAFFED

Unit: COUNT

Name in real-time metrics report: Staffed

CONTACTS_IN_QUEUE

Unit: COUNT

Name in real-time metrics report: In queue

CONTACTS_SCHEDULED

Unit: COUNT

Name in real-time metrics report: Scheduled

ESTIMATED_WAIT_TIME

Unit: SECONDS

This metric supports filter and grouping combination only used for core routing purpose. Valid filter and grouping use cases:

- Filter by a list of [Queues] and a list of [Channels], group by [“QUEUE”, “CHANNEL”]
- Filter by a singleton list of [Queue], a singleton list of [Channel], a list of [RoutingStepExpression], group by [“ROUTING_STEP_EXPRESSION”].

OLDEST_CONTACT_AGE

Unit: SECONDS

When you use groupings, Unit says SECONDS and the Value is returned in SECONDS.

When you do not use groupings, Unit says SECONDS but the Value is returned in MILLISECONDS. For example, if you get a response like this:

```
{ "Metric": { "Name": "OLDEST_CONTACT_AGE", "Unit": "SECONDS" },
"Value": 24113.0 }
```

The actual OLDEST_CONTACT_AGE is 24 seconds.

When the filter `RoutingStepExpression` is used, this metric is still calculated from enqueue time. For example, if a contact that has been queued under `<Expression 1>` for

10 seconds has expired and <Expression 2> becomes active, then OLDEST_CONTACT_AGE for this queue will be counted starting from 10, not 0.

Name in real-time metrics report: Oldest

SLOTS_ACTIVE

Unit: COUNT

Name in real-time metrics report: Active

SLOTS_AVAILABLE

Unit: COUNT

Name in real-time metrics report: Availability

Type: Array of CurrentMetric objects

Required: Yes

Filters

The filters to apply to returned metrics. You can filter up to the following limits:

- Queues: 100
- Routing profiles: 100
- Channels: 3 (VOICE, CHAT, and TASK channels are supported.)
- RoutingStepExpressions: 50
- AgentStatuses: 50
- Subtypes: 10
- ValidationTestTypes: 10

Metric data is retrieved only for the resources associated with the queues or routing profiles, and by any channels included in the filter. (You cannot filter by both queue AND routing profile.) You can include both resource IDs and resource ARNs in the same request.

When using AgentStatuses as filter make sure Queues is added as primary filter.

When using Subtypes as filter make sure Queues is added as primary filter.

When using ValidationTestTypes as filter make sure Queues is added as primary filter.

When using the RoutingStepExpression filter, you need to pass exactly one QueueId. The filter is also case sensitive so when using the RoutingStepExpression filter, grouping by ROUTING_STEP_EXPRESSION is required.

Currently tagging is only supported on the resources that are passed in the filter.

Type: Filters object

Required: Yes

Groupings

Defines the level of aggregation for metrics data by a dimension(s). Its similar to sorting items into buckets based on a common characteristic, then counting or calculating something for each bucket. For example, when grouped by QUEUE, the metrics returned apply to each queue rather than aggregated for all queues.

The grouping list is an ordered list, with the first item in the list defined as the primary grouping. If no grouping is included in the request, the aggregation happens at the instance-level.

- If you group by CHANNEL, you should include a Channels filter. VOICE, CHAT, and TASK channels are supported.
- If you group by AGENT_STATUS, you must include the QUEUE as the primary grouping and use queue filter. When you group by AGENT_STATUS, the only metric available is the AGENTS_ONLINE metric.
- If you group by SUBTYPE or VALIDATION_TEST_TYPE as secondary grouping then you must include QUEUE as primary grouping and use Queue as filter
- If you group by ROUTING_PROFILE, you must include either a queue or routing profile filter. In addition, a routing profile filter is required for metrics CONTACTS_SCHEDULED, CONTACTS_IN_QUEUE, and OLDEST_CONTACT_AGE.
- When using the RoutingStepExpression filter, group by ROUTING_STEP_EXPRESSION is required.

Type: Array of strings

Array Members: Maximum number of 2 items.

Valid Values: QUEUE | CHANNEL | ROUTING_PROFILE | ROUTING_STEP_EXPRESSION | AGENT_STATUS | SUBTYPE | VALIDATION_TEST_TYPE

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

The token expires after 5 minutes from the time it is created. Subsequent requests that use the token must use the same request parameters as the request that generated the token.

Type: String

Required: No

SortCriteria

The way to sort the resulting response based on metrics. You can enter one sort criteria. By default resources are sorted based on `AGENTS_ONLINE`, `DESCENDING`. The metric collection is sorted based on the input metrics.

Note the following:

- Sorting on `SLOTS_ACTIVE` and `SLOTS_AVAILABLE` is not supported.

Type: Array of CurrentMetricSortCriteria objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "ApproximateTotalCount": number,
   "DataSnapshotTime": number,
   "MetricResults": [
      {
         "Collections": [
            {
               "Metric": {
                  "MetricId": "string",
                  "Name": "string",
                  "Unit": "string"
               },
               "Value": number
            }
         ],
         "Dimensions": {
            "AgentStatus": {
               "Arn": "string",
               "Id": "string"
            },
            "Channel": "string",
            "Queue": {
               "Arn": "string",
               "Id": "string"
            },
            "RoutingProfile": {
               "Arn": "string",
               "Id": "string"
            },
            "RoutingStepExpression": "string",
            "Subtype": "string",
            "ValidationTestType": "string"
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total count of the result, regardless of the current page size.

Type: Long

DataSnapshotTime

The time at which the metrics were retrieved and cached for pagination.

Type: Timestamp

MetricResults

Information about the real-time metrics.

Type: Array of CurrentMetricResult objects

NextToken

If there are additional results, this is the token for the next set of results.

The token expires after 5 minutes from the time it is created. Subsequent requests that use the token must use the same request parameters as the request that generated the token.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example retrieves the specified real-time metrics.

Sample Request

```
{{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
```

```
  "Filters": {
    "Queues": [
      "11111111-2222-fcfc-abab-333333333333",

          "Id": "11111111-2222-fcfc-abab-333333333333"
```

```
        }
      }
    }
  ]
}
```

Sample GetCurrentMetricData Request Using RoutingStepExpression

This example illustrates one usage of GetCurrentMetricData.

```
{
     "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
    "CurrentMetrics": [
        {
            "Name": "OLDEST_CONTACT_AGE",
            "Unit": "SECONDS"
        },
        {
            "Name": "CONTACTS_IN_QUEUE",
            "Unit": "COUNT"
        }
    ],
    "Filters": {
        "Queues": [
            "11111111-2222-fcfc-abab-333333333333"
        ],
        "RoutingStepExpressions": [
            "{\"attributeCondition\":{\"proficiencyLevel\":1.0,\"comparisonOperator\":
\"NumberGreaterOrEqualTo\",\"name\":\"Location\",\"value\":\"Earth\"}}"
        ]
    },
    "Groupings": [
        "ROUTING_STEP_EXPRESSION"
    ],
    "MaxResults": 10
}
```

GetCurrentUserData

Service: Amazon Connect Service

Gets the real-time active user data from the specified Amazon Connect instance.

Request Syntax

```
POST /metrics/userdata/InstanceId HTTP/1.1
Content-type: application/json

{
   "Filters": {
      "Agents": [ "string" ],
      "ContactFilter": {
         "ContactStates": [ "string" ]
      },
      "Queues": [ "string" ],
      "RoutingProfiles": [ "string" ],
      "UserHierarchyGroups": [ "string" ]
   },
   "MaxResults": number,
   "NextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Filters

The filters to apply to returned user data. You can filter up to the following limits:

- Queues: 100
- Routing profiles: 100
- Agents: 100
- Contact states: 9
- User hierarchy groups: 1

The user data is retrieved for only the specified values/resources in the filter. A maximum of one filter can be passed from queues, routing profiles, agents, and user hierarchy groups.

Currently tagging is only supported on the resources that are passed in the filter.

Type: UserDataFilters object

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "UserDataList": [
      {
         "ActiveSlotsByChannel": {
            "string" : number
         },
         "AvailableSlotsByChannel": {
            "string" : number
         },
         "Contacts": [
            {
               "AgentContactState": "string",
               "Channel": "string",
               "ConnectedToAgentTimestamp": number,
               "ContactId": "string",
               "InitiationMethod": "string",
               "Queue": {
                  "Arn": "string",
                  "Id": "string"
               },
               "StateStartTimestamp": number
            }
         ],
         "HierarchyPath": {
            "LevelFive": {
               "Arn": "string",
               "Id": "string"
            },
            "LevelFour": {
               "Arn": "string",
               "Id": "string"
            },
            "LevelOne": {
               "Arn": "string",
               "Id": "string"
            },
            "LevelThree": {
               "Arn": "string",
               "Id": "string"
            },
            "LevelTwo": {
               "Arn": "string",
               "Id": "string"
```

```
            }
         },
         "MaxSlotsByChannel": {
            "string" : number
         },
         "NextStatus": "string",
         "RoutingProfile": {
            "Arn": "string",
            "Id": "string"
         },
         "Status": {
            "StatusArn": "string",
            "StatusName": "string",
            "StatusStartTimestamp": number
         },
         "User": {
            "Arn": "string",
            "Id": "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total count of the result, regardless of the current page size.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

UserDataList

A list of the user data that is returned.

Type: Array of UserData objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetEffectiveHoursOfOperations

Service: Amazon Connect Service

Get the hours of operations with the effective override applied.

Request Syntax

```
GET /effective-hours-of-operations/InstanceId/HoursOfOperationId?
fromDate=FromDate&toDate=ToDate HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

FromDate

The date from when the hours of operation are listed.

Pattern: ^\d{4}-\d{2}-\d{2}$

Required: Yes

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ToDate

The date until when the hours of operation are listed.

Pattern: ^\d{4}-\d{2}-\d{2}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EffectiveHoursOfOperationList": [
      {
         "Date": "string",
         "OperationalHours": [
            {
               "End": {
                  "Hours": number,
                  "Minutes": number
               },
               "Start": {
                  "Hours": number,
                  "Minutes": number
               }
            }
         ]
      }
   ],
   "EffectiveOverrideHoursList": [
      {
         "Date": "string",
         "OverrideHours": [
            {
               "End": {
                  "Hours": number,
                  "Minutes": number
               },
               "OperationalStatus": "string",
               "OverrideName": "string",
               "Start": {
                  "Hours": number,
                  "Minutes": number
               }
            }
```

```
            ]
        }
    ],
    "TimeZone": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EffectiveHoursOfOperationList

Information about the effective hours of operations.

Type: Array of EffectiveHoursOfOperations objects

EffectiveOverrideHoursList

Information about override configurations applied to the base hours of operation to calculate the effective hours.

For more information about how override types are applied, see Build your list of overrides in the *Administrator Guide*.

Type: Array of EffectiveOverrideHours objects

TimeZone

The time zone for the hours of operation.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetFederationToken

Service: Amazon Connect Service

Supports SAML sign-in for Amazon Connect. Retrieves a token for federation. The token is for the Amazon Connect user which corresponds to the IAM credentials that were used to invoke this action.

For more information about how SAML sign-in works in Amazon Connect, see Configure SAML with IAM for Amazon Connect in the *Amazon Connect Administrator Guide.*

> **Note**
>
> This API doesn't support root users. If you try to invoke GetFederationToken with root credentials, an error message similar to the following one appears:
> `Provided identity: Principal: .... User: .... cannot be used for federation with Amazon Connect`

Request Syntax

```
GET /user/federate/InstanceId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Credentials": {
      "AccessToken": "string",
      "AccessTokenExpiration": number,
      "RefreshToken": "string",
      "RefreshTokenExpiration": number
   },
   "SignInUrl": "string",
   "UserArn": "string",
   "UserId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Credentials

The credentials to use for federation.

Type: Credentials object

SignInUrl

The URL to sign into the user's instance.

Type: String

UserArn

The Amazon Resource Name (ARN) of the user.

Type: String

UserId

The identifier for the user. This can be the ID or the ARN of the user.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

UserNotFoundException

No user with the specified credentials was found in the Amazon Connect instance.

HTTP Status Code: 404

GetFlowAssociation

Service: Amazon Connect Service

Retrieves the flow associated for a given resource.

Request Syntax

```
GET /flow-associations/InstanceId/ResourceId/ResourceType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ResourceId

The identifier of the resource.

- AWS End User Messaging SMS phone number ARN when using `SMS_PHONE_NUMBER`
- AWS End User Messaging Social phone number ARN when using `WHATSAPP_MESSAGING_PHONE_NUMBER`

Required: Yes

ResourceType

A valid resource type.

Valid Values: `SMS_PHONE_NUMBER | INBOUND_EMAIL | OUTBOUND_EMAIL | ANALYTICS_CONNECTOR | WHATSAPP_MESSAGING_PHONE_NUMBER`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FlowId": "string",
   "ResourceId": "string",
   "ResourceType": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FlowId

The identifier of the flow.

Type: String

ResourceId

The identifier of the resource.

Type: String

ResourceType

A valid resource type.

Type: String

Valid Values: `SMS_PHONE_NUMBER | INBOUND_EMAIL | OUTBOUND_EMAIL | ANALYTICS_CONNECTOR | WHATSAPP_MESSAGING_PHONE_NUMBER`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetMetricData

Service: Amazon Connect Service

Gets historical metric data from the specified Amazon Connect instance.

For a description of each historical metric, see Metrics definitions in the *Amazon Connect Administrator Guide*.

> **Note**
>
> We recommend using the GetMetricDataV2 API. It provides more flexibility, features, and the ability to query longer time ranges than `GetMetricData`. Use it to retrieve historical agent and contact metrics for the last 3 months, at varying intervals. You can also use it to build custom dashboards to measure historical queue and agent performance. For example, you can track the number of incoming contacts for the last 7 days, with data split by day, to see how contact volume changed per day of the week.

Request Syntax

```
POST /metrics/historical/InstanceId HTTP/1.1
Content-type: application/json

{
   "EndTime": number,
   "Filters": {
      "AgentStatuses": [ "string" ],
      "Channels": [ "string" ],
      "Queues": [ "string" ],
      "RoutingProfiles": [ "string" ],
      "RoutingStepExpressions": [ "string" ],
      "Subtypes": [ "string" ],
      "ValidationTestTypes": [ "string" ]
   },
   "Groupings": [ "string" ],
   "HistoricalMetrics": [
      {
         "Name": "string",
         "Statistic": "string",
         "Threshold": {
            "Comparison": "string",
```

```
            "ThresholdValue": number
         },
         "Unit": "string"
      }
   ],
   "MaxResults": number,
   "NextToken": "string",
   "StartTime": number
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EndTime

The timestamp, in UNIX Epoch time format, at which to end the reporting interval for the retrieval of historical metrics data. The time must be specified using an interval of 5 minutes, such as 11:00, 11:05, 11:10, and must be later than the start time timestamp.

The time range between the start and end time must be less than 24 hours.

Type: Timestamp

Required: Yes

Filters

The queues, up to 100, or channels, to use to filter the metrics returned. Metric data is retrieved only for the resources associated with the queues or channels included in the filter. You can

include both queue IDs and queue ARNs in the same request. VOICE, CHAT, and TASK channels are supported.

RoutingStepExpression is not a valid filter for GetMetricData and we recommend switching to GetMetricDataV2 for more up-to-date features.

> **Note**
>
> To filter by `Queues`, enter the queue ID/ARN, not the name of the queue.

Type: Filters object

Required: Yes

Groupings

The grouping applied to the metrics returned. For example, when results are grouped by queue, the metrics returned are grouped by queue. The values returned apply to the metrics for each queue rather than aggregated for all queues.

If no grouping is specified, a summary of metrics for all queues is returned.

RoutingStepExpression is not a valid filter for GetMetricData and we recommend switching to GetMetricDataV2 for more up-to-date features.

Type: Array of strings

Array Members: Maximum number of 2 items.

Valid Values: `QUEUE | CHANNEL | ROUTING_PROFILE | ROUTING_STEP_EXPRESSION | AGENT_STATUS | SUBTYPE | VALIDATION_TEST_TYPE`

Required: No

HistoricalMetrics

The metrics to retrieve. Specify the name, unit, and statistic for each metric. The following historical metrics are available. For a description of each metric, see Metrics definition in the *Amazon Connect Administrator Guide*.

> **Note**
>
> This API does not support a contacts incoming metric (there's no CONTACTS_INCOMING metric missing from the documented list).

SERVICE_LEVEL

You can include up to 20 SERVICE_LEVEL metrics in a request.

Unit: PERCENT

Statistic: AVG

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you must enter `LT` (for "Less than").

UI name: Average queue abandon time

Type: Array of HistoricalMetric objects

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Required: No

StartTime

The timestamp, in UNIX Epoch time format, at which to start the reporting interval for the retrieval of historical metrics data. The time must be specified using a multiple of 5 minutes, such as 10:05, 10:10, 10:15.

The start time cannot be earlier than 24 hours before the time of the request. Historical metrics are available only for 24 hours.

Type: Timestamp

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "MetricResults": [
      {
         "Collections": [
            {
               "Metric": {
                  "Name": "string",
                  "Statistic": "string",
                  "Threshold": {
                     "Comparison": "string",
                     "ThresholdValue": number
                  },
                  "Unit": "string"
               },
               "Value": number
            }
         ],
         "Dimensions": {
            "AgentStatus": {
               "Arn": "string",
               "Id": "string"
            },
            "Channel": "string",
            "Queue": {
```

```
                "Arn": "string",
                "Id": "string"
            },
            "RoutingProfile": {
                "Arn": "string",
                "Id": "string"
            },
            "RoutingStepExpression": "string",
            "Subtype": "string",
            "ValidationTestType": "string"
        }
    }
  ],
  "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

MetricResults

Information about the historical metrics.

If no grouping is specified, a summary of metric data is returned.

Type: Array of HistoricalMetricResult objects

NextToken

If there are additional results, this is the token for the next set of results.

The token expires after 5 minutes from the time it is created. Subsequent requests that use the token must use the same request parameters as the request that generated the token.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example retrieves the specified historical metrics.

Sample Request

```
{
   "InstanceId" : "12345678-1234-5678-aabb-123456abcdef",
   "StartTime": 1548979200,
   "EndTime": 1549051200,

- AWS SDK for Ruby V3

GetMetricDataV2

Service: Amazon Connect Service

Gets metric data from the specified Amazon Connect instance.

`GetMetricDataV2` offers more features than GetMetricData, the previous version of this API. It has new metrics, offers filtering at a metric level, and offers the ability to filter and group data by channels, queues, routing profiles, agents, and agent hierarchy levels. It can retrieve historical data for the last 3 months, at varying intervals. It does not support agent queues.

For a description of the historical metrics that are supported by `GetMetricDataV2` and `GetMetricData`, see Metrics definitions in the *Amazon Connect Administrator Guide*.

Note

When you make a successful API request, you can expect the following metric values in the response:

1. **Metric value is null**: The calculation cannot be performed due to divide by zero or insufficient data
2. **Metric value is a number (including 0) of defined type**: The number provided is the calculation result
3. **MetricResult list is empty**: The request cannot find any data in the system

The following guidelines can help you work with the API:

- Each dimension in the metric response must contain a value
- Each item in MetricResult must include all requested metrics
- If the response is slow due to large result sets, try these approaches:
  - Narrow the time range of your request
  - Add filters to reduce the amount of data returned

Request Syntax

```
POST /metrics/data HTTP/1.1
Content-type: application/json
```

```
{
   "EndTime": number,
   "Filters": [
      {
         "FilterKey": "string",
         "FilterValues": [ "string" ],
         "StringCondition": {
            "Comparison": "string"
         }
      }
   ],
   "Groupings": [ "string" ],
   "Interval": {
      "IntervalPeriod": "string",
      "TimeZone": "string"
   },
   "MaxResults": number,
   "Metrics": [
      {
         "MetricFilters": [
            {
               "MetricFilterKey": "string",
               "MetricFilterValues": [ "string" ],
               "Negate": boolean
            }
         ],
         "MetricId": "string",
         "Name": "string",
         "Threshold": [
            {
               "Comparison": "string",
               "ThresholdValue": number
            }
         ]
      }
   ],
   "NextToken": "string",
   "ResourceArn": "string",
   "StartTime": number
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

EndTime

The timestamp, in UNIX Epoch time format, at which to end the reporting interval for the retrieval of historical metrics data. The time must be later than the start time timestamp. It cannot be later than the current timestamp.

Type: Timestamp

Required: Yes

Filters

Filtering is an operation that selects records that match a set of specified criteria. By narrowing the dataset before aggregation, filters ensure that only relevant records are included in the computation.

Filter keys

The following are valid filter keys for a `GetMetricDataV2` request:

`AGENT` | `AGENT_HIERARCHY_LEVEL_ONE` | `AGENT_HIERARCHY_LEVEL_TWO` | `AGENT_HIERARCHY_LEVEL_THREE` | `AGENT_HIERARCHY_LEVEL_FOUR` | `AGENT_HIERARCHY_LEVEL_FIVE` | `ANSWERING_MACHINE_DETECTION_STATUS` | `BOT_ALIAS` | `BOT_ID` | `BOT_INTENT_NAME` | `BOT_LOCALE` | `BOT_VERSION` | `CAMPAIGN` | `CAMPAIGN_DELIVERY_EVENT_TYPE` | `CAMPAIGN_EXCLUDED_EVENT_TYPE` | `CASE_STATUS` | `CASE_TEMPLATE_ARN` | `CHANNEL` | `contact/segmentAttributes/connect:Subtype` | `contact/segmentAttributes/connect:ValidationTestType` | `DISCONNECT_REASON` | `EVALUATION_FORM` | `EVALUATION_QUESTION` | `EVALUATION_SECTION` | `EVALUATION_SOURCE` | `EVALUATOR_ID` | `FEATURE` | `FLOW_ACTION_ID` | `FLOW_TYPE` | `FLOWS_MODULE_RESOURCE_ID` | `FLOWS_NEXT_RESOURCE_ID` | `FLOWS_NEXT_RESOURCE_QUEUE_ID` | `FLOWS_OUTCOME_TYPE` | `FLOWS_RESOURCE_ID` | `FORM_VERSION` | `INITIATING_FLOW`

| INITIATION_METHOD | INVOKING_RESOURCE_PUBLISHED_TIMESTAMP | INVOKING_RESOURCE_TYPE | PARENT_FLOWS_RESOURCE_ID | Q_CONNECT_ENABLED | QUEUE | RESOURCE_PUBLISHED_TIMESTAMP | ROUTING_PROFILE | ROUTING_STEP_EXPRESSION | TEST_CASE | TEST_CASE_EXECUTION_FAILURE_REASON | TEST_CASE_EXECUTION_RESULT | TEST_CASE_EXECUTION_STATE

> **Note**
>
> The following filter keys correspond to Amazon Connect resources and are used for authorizing requests. A GetMetricDataV2 request requires at least one of these filters: QUEUE, ROUTING_PROFILE, AGENT, AGENT_HIERARCHY_LEVEL_ONE, AGENT_HIERARCHY_LEVEL_TWO, AGENT_HIERARCHY_LEVEL_THREE, AGENT_HIERARCHY_LEVEL_FOUR, AGENT_HIERARCHY_LEVEL_FIVE, CAMPAIGN, EVALUATION_FORM, EVALUATOR_ID
> You can use up to 5 filter keys in a single request, and up to 100 filter values across all filter keys.

Filter values

- VOICE, CHAT, TASK, and EMAIL are valid filter values for the CHANNEL filter key. They do not count towards the limit of 100 filter values. For example, a GetMetricDataV2 request can filter by 50 queues, 35 agents, and 15 routing profiles for a total of 100 filter values, along with 4 channel filters.
- contact_lens_conversational_analytics is a valid filter value for the FEATURE filter key. It is available only for contacts analyzed by Contact Lens conversational analytics.
- connect:Chat, connect:SMS, connect:Telephony, and connect:WebRTC are valid filter value examples (not exhaustive) for the contact/segmentAttributes/connect:Subtype filter key.
- ROUTING_STEP_EXPRESSION accepts a filter value up to 3,000 characters in length. This filter is case-sensitive and order-sensitive. JSON string fields must be sorted in ascending order, and JSON array order must be preserved.
- TRUE and FALSE are the only valid filter values for the Q_CONNECT_ENABLED filter key.
  - TRUE includes all contacts that had Connect AI Agents enabled as part of the flow.
  - FALSE includes all contacts that did not have Connect AI Agents enabled as part of the flow.

- EXPERIENCE_VALIDATION and FLOW_VALIDATION are the only valid filter values for the contact/segmentAttributes/connect:ValidationTestType filter key. This filter is available only for contact record-driven metrics.
- Campaign ARNs are valid filter values for the CAMPAIGN filter key.
- To filter by phone number, see Create a historical metrics report in the *Amazon Connect Administrator Guide*.

Type: Array of FilterV2 objects

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Required: Yes

Groupings

The grouping applied to the metrics that are returned. For example, when results are grouped by queue, the metrics returned are grouped by queue. The values that are returned apply to the metrics for each queue. They are not aggregated for all queues.

If no grouping is specified, a summary of all metrics is returned.

Valid grouping keys: AGENT | AGENT_HIERARCHY_LEVEL_ONE | AGENT_HIERARCHY_LEVEL_TWO | AGENT_HIERARCHY_LEVEL_THREE | AGENT_HIERARCHY_LEVEL_FOUR | AGENT_HIERARCHY_LEVEL_FIVE | ANSWERING_MACHINE_DETECTION_STATUS | BOT_ID | BOT_ALIAS | BOT_VERSION | BOT_LOCALE | BOT_INTENT_NAME | CAMPAIGN | CAMPAIGN_DELIVERY_EVENT_TYPE | CAMPAIGN_EXCLUDED_EVENT_TYPE | CAMPAIGN_EXECUTION_TIMESTAMP | CASE_TEMPLATE_ARN | CASE_STATUS | CHANNEL | contact/segmentAttributes/connect:Subtype | DISCONNECT_REASON | EVALUATION_FORM | EVALUATION_SECTION | EVALUATION_QUESTION | EVALUATION_SOURCE | EVALUATOR_ID | FLOWS_RESOURCE_ID | FLOWS_MODULE_RESOURCE_ID | FLOW_ACTION_ID | FLOW_TYPE | FLOWS_OUTCOME_TYPE | FORM_VERSION | INITIATION_METHOD | INVOKING_RESOURCE_PUBLISHED_TIMESTAMP | INVOKING_RESOURCE_TYPE | PARENT_FLOWS_RESOURCE_ID | Q_CONNECT_ENABLED | QUEUE | RESOURCE_PUBLISHED_TIMESTAMP | ROUTING_PROFILE | ROUTING_STEP_EXPRESSION | TEST_CASE | TEST_CASE_EXECUTION_FAILURE_REASON | TEST_CASE_INVOCATION_METHOD

API, SCHEDULE, and EVENT are the only valid filterValues for TEST_CASE_INVOCATION_METHOD.

OBSERVE_EVENT, SEND_INSTRUCTION, ASSERT_DATA, and OVERRIDE_SYSTEM_BEHAVIOR are the only valid filterValues for TEST_CASE_EXECUTION_FAILURE_REASON

Type: Array of strings

Array Members: Maximum number of 4 items

Required: No

Type: Array of strings

Array Members: Maximum number of 4 items.

Required: No

Interval

The interval period and timezone to apply to returned metrics.

- `IntervalPeriod`: An aggregated grouping applied to request metrics. Valid `IntervalPeriod` values are: `FIFTEEN_MIN` | `THIRTY_MIN` | `HOUR` | `DAY` | `WEEK` | `TOTAL`.

  For example, if `IntervalPeriod` is selected `THIRTY_MIN`, `StartTime` and `EndTime` differs by 1 day, then Amazon Connect returns 48 results in the response. Each result is aggregated by the THIRTY_MIN period. By default Amazon Connect aggregates results based on the `TOTAL` interval period.

  The following list describes restrictions on `StartTime` and `EndTime` based on which `IntervalPeriod` is requested.

  - `FIFTEEN_MIN`: The difference between `StartTime` and `EndTime` must be less than 3 days.
  - `THIRTY_MIN`: The difference between `StartTime` and `EndTime` must be less than 3 days.
  - `HOUR`: The difference between `StartTime` and `EndTime` must be less than 3 days.
  - `DAY`: The difference between `StartTime` and `EndTime` must be less than 35 days.
  - `WEEK`: The difference between `StartTime` and `EndTime` must be less than 35 days.
  - `TOTAL`: The difference between `StartTime` and `EndTime` must be less than 35 days.
- `TimeZone`: The timezone applied to requested metrics.

Type: IntervalDetails object

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

Metrics

The metrics to retrieve. Specify the name or metricId, groupings, and filters for each metric. The following historical metrics are available. For a description of each metric, see Metrics definition in the *Amazon Connect Administrator Guide*.

> **Note**
>
> MetricId should be used to reference custom metrics or out of the box metrics as Arn. If using MetricId, the limit is 20 MetricId per request.

ABANDONMENT_RATE

Unit: Percent

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Abandonment rate

AGENT_ADHERENT_TIME

This metric is available only in AWS Regions where Forecasting, capacity planning, and scheduling is available.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Adherent time

AGENT_ANSWER_RATE

Unit: Percent

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Agent answer rate

AGENT_NON_ADHERENT_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Non-adherent time

AGENT_NON_RESPONSE

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Agent non-response

AGENT_NON_RESPONSE_WITHOUT_CUSTOMER_ABANDONS

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

Data for this metric is available starting from October 1, 2023 0:00:00 GMT.

UI name: Agent non-response without customer abandons

AGENT_OCCUPANCY

Unit: Percentage

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Occupancy

AGENT_SCHEDULE_ADHERENCE

This metric is available only in AWS Regions where Forecasting, capacity planning, and scheduling is available.

Unit: Percent

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Adherence

AGENT_SCHEDULED_TIME

This metric is available only in AWS Regions where Forecasting, capacity planning, and scheduling is available.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Scheduled time

AVG_ABANDON_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

Valid metric filter key: `INITIATION_METHOD`

UI name: Average queue abandon time

AVG_ACTIVE_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Average active time

AVG_AFTER_CONTACT_WORK_TIME

Unit: Seconds

Valid metric filter key: `INITIATION_METHOD`

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average after contact work time

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_AGENT_CONCURRENCY

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Average agent concurrency

AVG_AGENT_CONNECTING_TIME

Unit: Seconds

Valid metric filter key: `INITIATION_METHOD`. For now, this metric only supports the following as `INITIATION_METHOD`: `INBOUND` | `OUTBOUND` | `CALLBACK` | `API`

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Average agent API connecting time

> **Note**
>
> The `Negate` key in metric-level filters is not applicable for this metric.

AVG_AGENT_PAUSE_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Average agent pause time

AVG_BOT_CONVERSATION_TIME

Unit: Seconds

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Average bot conversation time

AVG_BOT_CONVERSATION_TURNS

Unit: Count

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Average bot conversation turns

AVG_CASE_RELATED_CONTACTS

Unit: Count

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Average contacts per case

AVG_CASE_RESOLUTION_TIME

Unit: Seconds

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Average case resolution time

AVG_CONTACT_DURATION

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average contact duration

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_CONTACT_FIRST_RESPONSE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Agent average contact first response wait time

AVG_CONVERSATION_CLOSE_TIME

Unit: Seconds

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average conversation close time

AVG_CONVERSATION_DURATION

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average conversation duration

AVG_DIALS_PER_MINUTE

This metric is available only for outbound campaigns that use the agent assisted voice and automated voice delivery modes.

Unit: Count

Valid groupings and filters: Agent, Campaign, Queue, Routing Profile

UI name: Average dials per minute

AVG_EVALUATION_SCORE

Unit: Percent

Valid groupings and filters: Agent, Agent Hierarchy, Channel, Evaluation Form ID, Evaluation Section ID, Evaluation Question ID, Evaluation Source, Form Version, Queue, Routing Profile

UI name: Average evaluation score

AVG_FIRST_RESPONSE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average agent first response time

AVG_FLOW_TIME

Unit: Seconds

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows next resource ID, Flows next resource queue ID, Flows outcome type, Flows resource ID, Initiation method, Resource published timestamp

UI name: Average flow time

AVG_GREETING_TIME_AGENT

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent greeting time

AVG_HANDLE_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, RoutingStepExpression

UI name: Average handle time

> **Note**
>
> Feature is a valid filter but not a valid grouping.

ACTIVE_AI_AGENTS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Type, AI Use Case, Channel, Queue, Routing Profile

UI name: Active AI Agents

AI_HANDOFF_RATE

Unit: Percent

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: AI Handoff Rate

AI_HANDOFFS

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: AI Handoffs

AI_AGENT_INVOCATION_SUCCESS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Agent Invocation Success

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_AGENT_INVOCATION_SUCCESS_RATE

Unit: Percent

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Agent Invocation Success Rate

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_AGENT_INVOCATIONS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Type, AI Agent Name Version, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Agent Invocations

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_RESPONSE_COMPLETION_RATE

Unit: Percent

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: AI Response Completion Rate

AI_INVOLVED_CONTACTS

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: AI Involved Contacts

AI_PROMPT_INVOCATION_SUCCESS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Prompt, AI Prompt ID, AI Prompt Name, AI Prompt Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Prompt Invocation Success

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_PROMPT_INVOCATION_SUCCESS_RATE

Unit: Percent

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Prompt, AI Prompt ID, AI Prompt Name, AI Prompt Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Prompt Invocation Success Rate

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_PROMPT_INVOCATIONS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Prompt, AI Prompt ID, AI Prompt Name, AI Prompt Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Prompt Invocations

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_TOOL_INVOCATION_SUCCESS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Tool ID, AI Tool Name, AI Tool Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Tool Invocation Success

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_TOOL_INVOCATION_SUCCESS_RATE

Unit: Percent

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Tool ID, AI Tool Name, AI Tool Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Tool Invocation Success Rate

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AI_TOOL_INVOCATIONS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Tool ID, AI Tool Name, AI Tool Type, AI Use Case, Channel, Queue, Routing Profile

UI name: AI Tool Invocations

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AVG_AI_AGENT_CONVERSATION_TURNS

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Use Case, Channel, Queue, Routing Profile

UI name: Average AI Agent Conversation Turns

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AVG_AI_CONVERSATION_TURNS

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Average AI Conversation Turns

AVG_AI_PROMPT_INVOCATION_LATENCY

Unit: Milliseconds

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Prompt, AI Prompt ID, AI Prompt Name, AI Prompt Type, AI Use Case, Channel, Queue, Routing Profile

UI name: Average AI Prompt Invocation Latency

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

AVG_AI_TOOL_INVOCATION_LATENCY

Unit: Milliseconds

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Name Version, AI Agent Type, AI Tool ID, AI Tool Name, AI Tool Type, AI Use Case, Channel, Queue, Routing Profile

UI name: Average AI Tool Invocation Latency

> **Note**
>
> AI Agent Name Version is not a valid filter but a valid grouping.

KNOWLEDGE_CONTENT_REFERENCES

Unit: Count

Valid groupings and filters: AI Agent, AI Agent Name, AI Agent Type, AI Use Case, Channel, Knowledge Base Name, Queue, Routing Profile

UI name: Knowledge Content References

PROACTIVE_INTENT_ENGAGEMENT_RATE

Unit: Percent

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Proactive Intent Engagement Rate

PROACTIVE_INTENT_RESPONSE_RATE

Unit: Percent

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Proactive Intent Response Rate

PROACTIVE_INTENTS_ANSWERED

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Proactive Intents Answered

PROACTIVE_INTENTS_DETECTED

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Proactive Intents Detected

PROACTIVE_INTENTS_ENGAGED

Unit: Count

Valid groupings and filters: AI Use Case, Channel, Queue, Routing Profile

UI name: Proactive Intents Engaged

AVG_HOLD_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average customer hold time

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_HOLD_TIME_ALL_CONTACTS

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average customer hold time all contacts

AVG_HOLDS

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average holds

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_INTERACTION_AND_HOLD_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent interaction and customer hold time

AVG_INTERACTION_TIME

Unit: Seconds

Valid metric filter key: `INITIATION_METHOD`

Valid groupings and filters: Queue, Channel, Routing Profile, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent interaction time

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_INTERRUPTIONS_AGENT

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent interruptions

AVG_INTERRUPTION_TIME_AGENT

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent interruption time

AVG_MESSAGE_LENGTH_AGENT

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average agent message length

AVG_MESSAGE_LENGTH_CUSTOMER

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average customer message length

AVG_MESSAGES

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average messages

AVG_MESSAGES_AGENT

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average agent messages

AVG_MESSAGES_BOT

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average bot messages

AVG_MESSAGES_CUSTOMER

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average customer messages

AVG_NON_TALK_TIME

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average non-talk time

AVG_QUEUE_ANSWER_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average queue answer time

Valid metric level filters: `INITIATION_METHOD`, `FEATURE`, `DISCONNECT_REASON`

> **Note**
>
> Feature is a valid filter but not a valid grouping.

AVG_QUEUE_ANSWER_TIME_CUSTOMER_FIRST_CALLBACK

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect, Agent Hierarchy

UI name: Avg. queue answer time - customer first callback

AVG_RESPONSE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average agent response time

AVG_RESPONSE_TIME_CUSTOMER

Unit: Seconds

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Average customer response time

AVG_RESOLUTION_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average resolution time

AVG_TALK_TIME

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average talk time

AVG_TALK_TIME_AGENT

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average agent talk time

AVG_TALK_TIME_CUSTOMER

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Average customer talk time

AVG_WAIT_TIME_AFTER_CUSTOMER_CONNECTION

This metric is available only for outbound campaigns that use the agent assisted voice and automated voice delivery modes.

Unit: Seconds

Valid groupings and filters: Campaign

UI name: Average wait time after customer connection

AVG_WAIT_TIME_AFTER_CUSTOMER_FIRST_CALLBACK_CONNECTION

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect, Agent Hierarchy

UI name: Avg. wait time after customer connection - customer first callback

AVG_WEIGHTED_EVALUATION_SCORE

Unit: Percent

Valid groupings and filters: Agent, Agent Hierarchy, Channel, Evaluation Form Id, Evaluation Section ID, Evaluation Question ID, Evaluation Source, Form Version, Queue, Routing Profile

UI name: Average weighted evaluation score

BOT_CONVERSATIONS_COMPLETED

Unit: Count

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Bot conversations completed

BOT_INTENTS_COMPLETED

Unit: Count

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Bot intent name, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Bot intents completed

CAMPAIGN_CONTACTS_ABANDONED_AFTER_X

This metric is available only for outbound campaigns using the agent assisted voice and automated voice delivery modes.

Unit: Count

Valid groupings and filters: Agent, Campaign

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you must enter `GT` (for *Greater than*).

UI name: Campaign contacts abandoned after X

CAMPAIGN_CONTACTS_ABANDONED_AFTER_X_RATE

This metric is available only for outbound campaigns using the agent assisted voice and automated voice delivery modes.

Unit: Percent

Valid groupings and filters: Agent, Campaign

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you must enter `GT` (for *Greater than*).

UI name: Campaign contacts abandoned after X rate

CAMPAIGN_INTERACTIONS

This metric is available only for outbound campaigns using the email delivery mode.

Unit: Count

Valid metric filter key: CAMPAIGN_INTERACTION_EVENT_TYPE

Valid groupings and filters: Campaign

UI name: Campaign interactions

CAMPAIGN_PROGRESS_RATE

This metric is only available for outbound campaigns initiated using a customer segment. It is not available for event triggered campaigns.

Unit: Percent

Valid groupings and filters: Campaign, Campaign Execution Timestamp

UI name: Campaign progress rate

CAMPAIGN_SEND_ATTEMPTS

This metric is available only for outbound campaigns.

Unit: Count

Valid groupings and filters: Campaign, Channel, contact/segmentAttributes/connect:Subtype

UI name: Campaign send attempts

CAMPAIGN_SEND_EXCLUSIONS

This metric is available only for outbound campaigns.

Valid metric filter key: CAMPAIGN_EXCLUDED_EVENT_TYPE

Unit: Count

Valid groupings and filters: Campaign, Campaign Excluded Event Type, Campaign Execution Timestamp

UI name: Campaign send exclusions

CASES_CREATED

Unit: Count

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Cases created

CONTACTS_CREATED

Unit: Count

Valid metric filter key: `INITIATION_METHOD`

Valid groupings and filters: Queue, Channel, Routing Profile, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts created

Note

Feature is a valid filter but not a valid grouping.

CONTACTS_HANDLED

Unit: Count

Valid metric filter key: `INITIATION_METHOD`, `DISCONNECT_REASON`

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, RoutingStepExpression, Q in Connect

UI name: Contacts handled

> **Note**
>
> Feature is a valid filter but not a valid grouping.

CONTACTS_HANDLED_BY_CONNECTED_TO_AGENT

Unit: Count

Valid metric filter key: `INITIATION_METHOD`

Valid groupings and filters: Queue, Channel, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts handled (connected to agent timestamp)

CONTACTS_HOLD_ABANDONS

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts hold disconnect

CONTACTS_ON_HOLD_AGENT_DISCONNECT

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contacts hold agent disconnect

CONTACTS_ON_HOLD_CUSTOMER_DISCONNECT

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contacts hold customer disconnect

CONTACTS_PUT_ON_HOLD

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contacts put on hold

CONTACTS_TRANSFERRED_OUT_EXTERNAL

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contacts transferred out external

CONTACTS_TRANSFERRED_OUT_INTERNAL

Unit: Percent

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contacts transferred out internal

CONTACTS_QUEUED

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts queued

CONTACTS_QUEUED_BY_ENQUEUE

Unit: Count

Valid groupings and filters: Queue, Channel, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype

UI name: Contacts queued (enqueue timestamp)

CONTACTS_REMOVED_FROM_QUEUE_IN_X

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Q in Connect

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you can use `LT` (for "Less than") or `LTE` (for "Less than equal").

UI name: Contacts removed from queue in X seconds

CONTACTS_RESOLVED_IN_X

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, contact/segmentAttributes/connect:Subtype, Q in Connect

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you can use `LT` (for "Less than") or `LTE` (for "Less than equal").

UI name: Contacts resolved in X

CONTACTS_TRANSFERRED_OUT

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Feature, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts transferred out

> **Note**
>
> Feature is a valid filter but not a valid grouping.

CONTACTS_TRANSFERRED_OUT_BY_AGENT

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts transferred out by agent

CONTACTS_TRANSFERRED_OUT_FROM_QUEUE

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contacts transferred out queue

CURRENT_CASES

Unit: Count

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Current cases

CONVERSATIONS_ABANDONED

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Feature, RoutingStepExpression, Initiation method, Routing Profile, Queue, Q in Connect

UI name: Conversations abandoned

DELIVERY_ATTEMPTS

This metric is available only for outbound campaigns.

Unit: Count

Valid metric filter key: `ANSWERING_MACHINE_DETECTION_STATUS`, `CAMPAIGN_DELIVERY_EVENT_TYPE`, `DISCONNECT_REASON`

Valid groupings and filters: Agent, Answering Machine Detection Status, Campaign, Campaign Delivery EventType, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Queue, Routing Profile

UI name: Delivery attempts

> **Note**
>
> Campaign Delivery EventType filter and grouping are only available for SMS and Email campaign delivery modes. Agent, Queue, Routing Profile, Answering Machine Detection Status and Disconnect Reason are only available for agent assisted voice and automated voice delivery modes.

DELIVERY_ATTEMPT_DISPOSITION_RATE

This metric is available only for outbound campaigns. Dispositions for the agent assisted voice and automated voice delivery modes are only available with answering machine detection enabled.

Unit: Percent

Valid metric filter key: `ANSWERING_MACHINE_DETECTION_STATUS`, `CAMPAIGN_DELIVERY_EVENT_TYPE`, `DISCONNECT_REASON`

Valid groupings and filters: Agent, Answering Machine Detection Status, Campaign, Channel, contact/segmentAttributes/connect:Subtype, Disconnect Reason, Queue, Routing Profile

UI name: Delivery attempt disposition rate

> **Note**
>
> Campaign Delivery Event Type filter and grouping are only available for SMS and Email campaign delivery modes. Agent, Queue, Routing Profile, Answering Machine Detection Status and Disconnect Reason are only available for agent assisted voice and automated voice delivery modes.

EVALUATIONS_PERFORMED

Unit: Count

Valid groupings and filters: Agent, Agent Hierarchy, Channel, Evaluation Form ID, Evaluation Source, Form Version, Queue, Routing Profile

UI name: Evaluations performed

FLOWS_OUTCOME

Unit: Count

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows next resource ID, Flows next resource queue ID, Flows outcome type, Flows resource ID, Initiation method, Resource published timestamp

UI name: Flows outcome

FLOWS_STARTED

Unit: Count

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows resource ID, Initiation method, Resource published timestamp

UI name: Flows started

HUMAN_ANSWERED_CALLS

This metric is available only for outbound campaigns. Dispositions for the agent assisted voice and automated voice delivery modes are only available with answering machine detection enabled.

Unit: Count

Valid groupings and filters: Agent, Campaign

UI name: Human answered

MAX_FLOW_TIME

Unit: Seconds

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows next resource ID, Flows next resource queue ID, Flows outcome type, Flows resource ID, Initiation method, Resource published timestamp

UI name: Maximum flow time

MAX_QUEUED_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Maximum queued time

MIN_FLOW_TIME

Unit: Seconds

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows next resource ID, Flows next resource queue ID, Flows outcome type, Flows resource ID, Initiation method, Resource published timestamp

UI name: Minimum flow time

PERCENT_AUTOMATIC_FAILS

Unit: Percent

Valid groupings and filters: Agent, Agent Hierarchy, Channel, Evaluation Form ID, Evaluation Source, Form Version, Queue, Routing Profile

UI name: Automatic fails percent

PERCENT_BOT_CONVERSATIONS_OUTCOME

Unit: Percent

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Percent bot conversations outcome

PERCENT_BOT_INTENTS_OUTCOME

Unit: Percent

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Bot ID, Bot alias, Bot version, Bot locale, Bot intent name, Flows resource ID, Flows module resource ID, Flow type, Flow action ID, Invoking resource published timestamp, Initiation method, Invoking resource type, Parent flows resource ID

UI name: Percent bot intents outcome

PERCENT_CASES_FIRST_CONTACT_RESOLVED

Unit: Percent

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Cases resolved on first contact

PERCENT_CONTACTS_STEP_EXPIRED

Unit: Percent

Valid groupings and filters: Queue, RoutingStepExpression

UI name: This metric is available in Real-time Metrics UI but not on the Historical Metrics UI.

PERCENT_CONTACTS_STEP_JOINED

Unit: Percent

Valid groupings and filters: Queue, RoutingStepExpression

UI name: This metric is available in Real-time Metrics UI but not on the Historical Metrics UI.

PERCENT_FLOWS_OUTCOME

Unit: Percent

Valid metric filter key: `FLOWS_OUTCOME_TYPE`

Valid groupings and filters: Channel, contact/segmentAttributes/connect:Subtype, Flow type, Flows module resource ID, Flows next resource ID, Flows next resource queue ID, Flows outcome type, Flows resource ID, Initiation method, Resource published timestamp

UI name: Flows outcome percentage.

> **Note**
>
> The `FLOWS_OUTCOME_TYPE` is not a valid grouping.

PERCENT_NON_TALK_TIME

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Percentage

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Non-talk time percent

PERCENT_TALK_TIME

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Percentage

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Talk time percent

PERCENT_TALK_TIME_AGENT

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Percentage

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Agent talk time percent

PERCENT_TALK_TIME_CUSTOMER

This metric is available only for contacts analyzed by Contact Lens conversational analytics.

Unit: Percentage

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Customer talk time percent

RECIPIENTS_ATTEMPTED

This metric is only available for outbound campaigns initiated using a customer segment. It is not available for event triggered campaigns.

Unit: Count

Valid groupings and filters: Campaign, Campaign Execution Timestamp

UI name: Recipients attempted

RECIPIENTS_INTERACTED

This metric is only available for outbound campaigns initiated using a customer segment. It is not available for event triggered campaigns.

Valid metric filter key: CAMPAIGN_INTERACTION_EVENT_TYPE

Unit: Count

Valid groupings and filters: Campaign, Channel, contact/segmentAttributes/connect:Subtype, Campaign Execution Timestamp

UI name: Recipients interacted

RECIPIENTS_TARGETED

This metric is only available for outbound campaigns initiated using a customer segment. It is not available for event triggered campaigns.

Unit: Count

Valid groupings and filters: Campaign, Campaign Execution Timestamp

UI name: Recipients targeted

REOPENED_CASE_ACTIONS

Unit: Count

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Cases reopened

RESOLVED_CASE_ACTIONS

Unit: Count

Required filter key: CASE_TEMPLATE_ARN

Valid groupings and filters: CASE_TEMPLATE_ARN, CASE_STATUS

UI name: Cases resolved

SERVICE_LEVEL

You can include up to 20 SERVICE_LEVEL metrics in a request.

Unit: Percent

Valid groupings and filters: Queue, Channel, Routing Profile, Q in Connect

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you can use `LT` (for "Less than") or `LTE` (for "Less than equal").

UI name: Service level X

STEP_CONTACTS_QUEUED

Unit: Count

Valid groupings and filters: Queue, RoutingStepExpression

UI name: This metric is available in Real-time Metrics UI but not on the Historical Metrics UI.

SUM_AFTER_CONTACT_WORK_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: After contact work time

SUM_CONNECTING_TIME_AGENT

Unit: Seconds

Valid metric filter key: `INITIATION_METHOD`. This metric only supports the following filter keys as `INITIATION_METHOD`: `INBOUND` | `OUTBOUND` | `CALLBACK` | `API` | `CALLBACK_CUSTOMER_FIRST_DIALED`

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Agent API connecting time

> **Note**
>
> The `Negate` key in metric-level filters is not applicable for this metric.

CONTACTS_ABANDONED

Unit: Count

Metric filter:

- Valid values: `API`| `INCOMING` | `OUTBOUND` | `TRANSFER` | `CALLBACK` | `QUEUE_TRANSFER`| `Disconnect` | `CALLBACK_CUSTOMER_FIRST_DIALED`

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, RoutingStepExpression, Q in Connect

UI name: Contact abandoned

SUM_CONTACTS_ABANDONED_IN_X

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, contact/segmentAttributes/connect:Subtype, Q in Connect

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you can use `LT` (for "Less than") or `LTE` (for "Less than equal").

UI name: Contacts abandoned in X seconds

SUM_CONTACTS_ANSWERED_IN_X

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, contact/segmentAttributes/connect:Subtype, Q in Connect

Threshold: For `ThresholdValue`, enter any whole number from 1 to 604800 (inclusive), in seconds. For `Comparison`, you can use `LT` (for "Less than") or `LTE` (for "Less than equal").

UI name: Contacts answered in X seconds

SUM_CONTACT_FLOW_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contact flow time

SUM_CONTACT_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Agent on contact time

SUM_CONTACTS_DISCONNECTED

Valid metric filter key: `DISCONNECT_REASON`

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Contact disconnected

SUM_ERROR_STATUS_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Error status time

SUM_HANDLE_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Contact handle time

SUM_HOLD_TIME

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Customer hold time

SUM_IDLE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Agent idle time

SUM_INTERACTION_AND_HOLD_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy, Q in Connect

UI name: Agent interaction and hold time

SUM_INTERACTION_TIME

Unit: Seconds

Valid groupings and filters: Queue, Channel, Routing Profile, Agent, Agent Hierarchy

UI name: Agent interaction time

SUM_NON_PRODUCTIVE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Agent non-productive time

SUM_ONLINE_TIME_AGENT

Unit: Seconds

Valid groupings and filters: Routing Profile, Agent, Agent Hierarchy

UI name: Online time

SUM_RETRY_CALLBACK_ATTEMPTS

Unit: Count

Valid groupings and filters: Queue, Channel, Routing Profile, contact/segmentAttributes/connect:Subtype, Q in Connect

UI name: Callback attempts

Type: Array of MetricV2 objects

Required: Yes

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

ResourceArn

The Amazon Resource Name (ARN) of the resource. This includes the `instanceId` an Amazon Connect instance.

Type: String

Required: Yes

StartTime

The timestamp, in UNIX Epoch time format, at which to start the reporting interval for the retrieval of historical metrics data. The time must be before the end time timestamp. The start and end time depends on the `IntervalPeriod` selected. By default the time range between start and end time is 35 days. Historical metrics are available for 3 months.

Type: Timestamp

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "MetricResults": [
      {
         "Collections": [
            {
               "Metric": {
                  "MetricFilters": [
                     {
                        "MetricFilterKey": "string",
                        "MetricFilterValues": [ "string" ],
                        "Negate": boolean
                     }
                  ],
                  "MetricId": "string",
                  "Name": "string",
                  "Threshold": [
                     {
                        "Comparison": "string",
                        "ThresholdValue": number
                     }
                  ]
               },
               "Value": number
            }
         ],
         "Dimensions": {
```

```
            "string" : "string"
         },
         "MetricInterval": {
            "EndTime": number,
            "Interval": "string",
            "StartTime": number
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

MetricResults

Information about the metrics requested in the API request If no grouping is specified, a summary of metric data is returned.

Type: Array of MetricResultV2 objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetPromptFile

Service: Amazon Connect Service

Gets the prompt file.

Request Syntax

```
GET /prompts/InstanceId/PromptId/file HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PromptId

A unique identifier for the prompt.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
```

```
   "LastModifiedTime": number,
   "PromptPresignedUrl": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

PromptPresignedUrl

A generated URL to the prompt that can be given to an unauthorized user so they can access the prompt in S3.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetTaskTemplate

Service: Amazon Connect Service

Gets details about a specific task template in the specified Amazon Connect instance.

Request Syntax

```
GET /instance/InstanceId/task/template/TaskTemplateId?snapshotVersion=SnapshotVersion
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

SnapshotVersion

The system generated version of a task template that is associated with a task, when the task is created.

TaskTemplateId

A unique identifier for the task template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "Arn": "string",
   "Constraints": {
      "InvisibleFields": [
         {
            "Id": {

      "SelfAssignFlowId": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN).

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Constraints

Constraints that are applicable to the fields listed.

Type: TaskTemplateConstraints object

ContactFlowId

The identifier of the flow that runs by default when a task is created by referencing this template.

Type: String

Length Constraints: Maximum length of 500.

CreatedTime

The timestamp when the task template was created.

Type: Timestamp

Defaults

The default values for fields when a task is created by referencing this template.

Type: TaskTemplateDefaults object

Description

The description of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Fields

Fields that are part of the template.

Type: Array of TaskTemplateField objects

Id

A unique identifier for the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

LastModifiedTime

The timestamp when the task template was last modified.

Type: Timestamp

Name

The name of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

SelfAssignFlowId

The ContactFlowId for the flow that will be run if this template is used to create a self-assigned task.

Type: String

Length Constraints: Maximum length of 500.

Status

Marks a template as `ACTIVE` or `INACTIVE` for a task to refer to it. Tasks can only be created from `ACTIVE` templates. If a template is marked as `INACTIVE`, then a task that refers to this template cannot be created.

Type: String

Valid Values: `ACTIVE | INACTIVE`

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetTestCaseExecutionSummary

Service: Amazon Connect Service

Retrieves an overview of a test execution that includes the status of the execution, start and end time, and observation summary.

Request Syntax

```
GET /test-cases/InstanceId/TestCaseId/TestCaseExecutionId/summary HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TestCaseExecutionId

The identifier of the test case execution.

Length Constraints: Maximum length of 500.

Required: Yes

TestCaseId

The identifier of the test case.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EndTime": number,
   "ObservationSummary": {
      "ObservationsFailed": number,
      "ObservationsPassed": number,
      "TotalObservations": number
   },
   "StartTime": number,
   "Status": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EndTime

The timestamp when the test case execution ended.

Type: Timestamp

ObservationSummary

Summary statistics for the test case execution.

Type: ObservationSummary object

StartTime

The timestamp when the test case execution started.

Type: Timestamp

Status

The status of the test case execution.

Type: String

Valid Values: `INITIATED | PASSED | FAILED | IN_PROGRESS | STOPPED`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetTrafficDistribution

Service: Amazon Connect Service

Retrieves the current traffic distribution for a given traffic distribution group.

Request Syntax

```
GET /traffic-distribution/Id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Id

The identifier of the traffic distribution group. This can be the ID or the ARN if the API is being called in the Region where the traffic distribution group was created. The ARN must be provided if the call is from the replicated Region.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AgentConfig": {
      "Distributions": [
         {
            "Percentage": number,
            "Region": "string"
```

```
            }
         ]
      },
      "Arn": "string",
      "Id": "string",
      "SignInConfig": {
         "Distributions": [
            {
               "Enabled": boolean,
               "Region": "string"
            }
         ]
      },
      "TelephonyConfig": {
         "Distributions": [
            {
               "Percentage": number,
               "Region": "string"
            }
         ]
      }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AgentConfig

The distribution of agents between the instance and its replica(s).

Type: AgentConfig object

Arn

The Amazon Resource Name (ARN) of the traffic distribution group.

Type: String

Pattern: `^arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Id

The identifier of the traffic distribution group. This can be the ID or the ARN if the API is being called in the Region where the traffic distribution group was created. The ARN must be provided if the call is from the replicated Region.

Type: String

Pattern: `^[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

SignInConfig

The distribution that determines which AWS Regions should be used to sign in agents in to both the instance and its replica(s).

Type: SignInConfig object

TelephonyConfig

The distribution of traffic between the instance and its replicas.

Type: TelephonyConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ImportPhoneNumber

Service: Amazon Connect Service

Imports a claimed phone number from an external service, such as AWS End User Messaging, into an Amazon Connect instance. You can call this API only in the same AWS Region where the Amazon Connect instance was created.

> **Important**
>
> Call the DescribePhoneNumber API to verify the status of a previous `ImportPhoneNumber` operation.

If you plan to claim or import numbers and then release numbers frequently, contact us for a service quota exception. Otherwise, it is possible you will be blocked from claiming and releasing any more numbers until up to 180 days past the oldest number released has expired.

By default you can claim or import and then release up to 200% of your maximum number of active phone numbers. If you claim or import and then release phone numbers using the UI or API during a rolling 180 day cycle that exceeds 200% of your phone number service level quota, you will be blocked from claiming or importing any more numbers until 180 days past the oldest number released has expired.

For example, if you already have 99 claimed or imported numbers and a service level quota of 99 phone numbers, and in any 180 day period you release 99, claim 99, and then release 99, you will have exceeded the 200% limit. At that point you are blocked from claiming any more numbers until you open an Support ticket.

Request Syntax

```
POST /phone-number/import HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "InstanceId": "string",
   "PhoneNumberDescription": "string",
   "SourcePhoneNumberArn": "string",
   "Tags": {
      "string" : "string"
```

```
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PhoneNumberDescription

The description of the phone number.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `^[\W\S_]*`

Required: No

SourcePhoneNumberArn

The claimed phone number ARN being imported from the external service, such as AWS End User Messaging. If it is from AWS End User Messaging, it looks like the ARN of the phone number to import from AWS End User Messaging.

Type: String

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "PhoneNumberArn": "string",
   "PhoneNumberId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PhoneNumberArn

The Amazon Resource Name (ARN) of the phone number.

Type: String

PhoneNumberId

A unique identifier for the phone number.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ImportWorkspaceMedia

Service: Amazon Connect Service

Imports a media asset (such as a logo) for use in a workspace.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/media HTTP/1.1
Content-type: application/json

{
   "MediaSource": "string",
   "MediaType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

MediaSource

The media source. Can be an S3 presigned URL or a base64-encoded string.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 533333.

Pattern: `.*\\S.*`

Required: Yes

MediaType

The type of media. Valid values are: `IMAGE_LOGO_FAVICON` and `IMAGE_LOGO_HORIZONTAL`.

Type: String

Valid Values: `IMAGE_LOGO_LIGHT_FAVICON | IMAGE_LOGO_DARK_FAVICON | IMAGE_LOGO_LIGHT_HORIZONTAL | IMAGE_LOGO_DARK_HORIZONTAL`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListAgentStatuses

Service: Amazon Connect Service

Lists agent statuses.

Request Syntax

```
GET /agent-status/InstanceId?
AgentStatusTypes=AgentStatusTypes&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

AgentStatusTypes

Available agent status types.

Array Members: Maximum number of 3 items.

Valid Values: `ROUTABLE | CUSTOM | OFFLINE`

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AgentStatusSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Type": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AgentStatusSummaryList

A summary of agent statuses.

Type: Array of AgentStatusSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

ListAnalyticsDataAssociations

Service: Amazon Connect Service

Lists the association status of requested dataset ID for a given Amazon Connect instance.

Request Syntax

```
GET /analytics-data/instance/InstanceId/association?
DataSetId=DataSetId&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

DataSetId

The identifier of the dataset to get the association status.

Length Constraints: Minimum length of 1. Maximum length of 255.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "Results": [
      {
         "DataSetId": "string",
         "ResourceShareArn": "string",
         "ResourceShareId": "string",
         "ResourceShareStatus": "string",
         "TargetAccountId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Results

An array of successful results: `DataSetId`, `TargetAccountId`, `ResourceShareId`, `ResourceShareArn`. This is a paginated API, so `nextToken` is given if there are more results to be returned.

Type: Array of AnalyticsDataAssociationResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListAnalyticsDataLakeDataSets

Service: Amazon Connect Service

Lists the data lake datasets available to associate with for a given Amazon Connect instance.

Request Syntax

```
GET /analytics-data/instance/InstanceId/datasets?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "NextToken": "string",
   "Results": [
      {
         "DataSetId": "string",
         "DataSetName": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Results

An array of successful results: `DataSetId`, `DataSetName`. This is a paginated API, so `nextToken` is given if there are more results to be returned.

Type: Array of AnalyticsDataSetsResult objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListApprovedOrigins

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of all approved origins associated with the instance.

Request Syntax

```
GET /instance/InstanceId/approved-origins?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 25.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NextToken": "string",
   "Origins": [ "string" ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Origins

The approved origins.

Type: Array of strings

Length Constraints: Maximum length of 267.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListAssociatedContacts

Service: Amazon Connect Service

Provides information about contact tree, a list of associated contacts with a unique identifier.

Request Syntax

```
GET /contact/associated/InstanceId?
contactId=ContactId&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactSummaryList": [
      {
         "Channel": "string",
         "ContactArn": "string",
         "ContactId": "string",
         "DisconnectTimestamp": number,
         "InitialContactId": "string",
         "InitiationMethod": "string",
         "InitiationTimestamp": number,
         "PreviousContactId": "string",
         "RelatedContactId": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactSummaryList

List of the contact summary for all the contacts in contact tree associated with unique identifier.

Type: Array of AssociatedContactSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListAuthenticationProfiles

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change. To request access to this API, contact Support.

Provides summary information about the authentication profiles in a specified Amazon Connect instance.

Request Syntax

```
GET /authentication-profiles-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AuthenticationProfileSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "IsDefault": boolean,
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AuthenticationProfileSummaryList

A summary of a given authentication profile.

Type: Array of AuthenticationProfileSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListBots

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

For the specified version of Amazon Lex, returns a paginated list of all the Amazon Lex bots currently associated with the instance. Use this API to return both Amazon Lex V1 and V2 bots.

Request Syntax

```
GET /instance/InstanceId/bots?
lexVersion=LexVersion&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

LexVersion

The version of Amazon Lex or Amazon Lex V2.

Valid Values: `V1 | V2`

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 25.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LexBots": [
      {
         "LexBot": {
            "LexRegion": "string",
            "Name": "string"
         },
         "LexV2Bot": {
            "AliasArn": "string"
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LexBots

The names and AWS Regions of the Amazon Lex or Amazon Lex V2 bots associated with the specified instance.

Type: Array of LexBotConfig objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListChildHoursOfOperations

Service: Amazon Connect Service

Provides information about the child hours of operations for the specified parent hours of operation.

For more information about child hours of operations, see Link overrides from different hours of operation in the *Administrator Guide*.

Request Syntax

```
GET /hours-of-operations/InstanceId/HoursOfOperationId/hours?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier of the parent hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ChildHoursOfOperationsSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "Name": "string"
      }
   ],
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ChildHoursOfOperationsSummaryList

Information about the hours of operation.

Type: Array of HoursOfOperationsIdentifier objects

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListContactEvaluations

Service: Amazon Connect Service

Lists contact evaluations in the specified Amazon Connect instance.

Request Syntax

```
GET /contact-evaluations/InstanceId?contactId=ContactId&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

> **Important**
>
> This is not expected to be set because the value returned in the previous response is always null.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationSummaryList": [
      {
         "Acknowledgement": {
            "AcknowledgedBy": "string",
            "AcknowledgedTime": number,
            "AcknowledgerComment": "string"
         },
         "AutoEvaluationEnabled": boolean,
         "AutoEvaluationStatus": "string",
         "CalibrationSessionId": "string",
         "ContactParticipant": {
            "ContactParticipantId": "string",
            "ContactParticipantRole": "string"
         },
         "CreatedTime": number,
         "EvaluationArn": "string",
         "EvaluationFormId": "string",
         "EvaluationFormTitle": "string",
         "EvaluationId": "string",
         "EvaluationType": "string",
         "EvaluatorArn": "string",
         "LastModifiedTime": number,
         "Score": {
            "AppliedWeight": number,
            "AutomaticFail": boolean,
            "NotApplicable": boolean,
            "Percentage": number
         },
         "Status": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationSummaryList

Provides details about a list of contact evaluations belonging to an instance.

Type: Array of EvaluationSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

> **Important**
>
> This is always returned as null in the response.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example lists the contact evaluations for a contact.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "ContactId": "[contact_id]"
}
```

Sample Response

```
{
   "EvaluationSummaryList": [
      {
         "EvaluationId": "[evaluation_id]",
         "EvaluationArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/contact-evaluation/[evaluation_id]",
         "EvaluationFormTitle": "form-title",
         "EvaluationFormId": "[evaluation_form_id]",
         "Status": "DRAFT",
         "EvaluatorArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/agent/arn:aws:sts::[account_id]:assumed-role/Admin/username",
```

```
            "CreatedTime": "2023-05-04T01:16:29.693000-07:00",
            "LastModifiedTime": "2023-05-04T01:16:29.693000-07:00"
        },
    ]
}
```

ListContactFlowModuleAliases

Service: Amazon Connect Service

Lists all aliases associated with a contact flow module, showing their current version mappings and metadata.

Request Syntax

```
GET /contact-flow-modules/InstanceId/ContactFlowModuleId/aliases?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModuleAliasSummaryList": [
      {
         "AliasDescription": "string",
         "AliasId": "string",
         "AliasName": "string",
         "Arn": "string",
         "LastModifiedTime": number,
         "Version": number
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModuleAliasSummaryList

Information about the flow module aliases.

Type: Array of ContactFlowModuleAliasSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Response

This example illustrates one usage of ListContactFlowModuleAliases.

```
{
   "NextToken": "NextTokenId",
   "ContactFlowModuleAliasSummaryList": [
      {
         "Arn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
         "AliasId": "alias-12345678",
         "Version": 2,
         "AliasName": "production",
         "AliasDescription": "Production version of the customer service module",
         "LastModifiedTime": "2024-01-15T10:30:00.000Z"
      },
      {
         "Arn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
         "AliasId": "alias-87654321",
         "Version": 1,
         "AliasName": "staging",
         "AliasDescription": "Staging version for testing",
         "LastModifiedTime": "2024-01-10T14:20:00.000Z"
      }
   ]
}
```

ListContactFlowModules

Service: Amazon Connect Service

Provides information about the flow modules for the specified Amazon Connect instance.

Request Syntax

```
GET /contact-flow-modules-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&state=ContactFlowModuleState HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleState

The state of the flow module.

Valid Values: `ACTIVE | ARCHIVED`

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModulesSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "Name": "string",
         "State": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModulesSummaryList

Information about the flow module.

Type: Array of ContactFlowModuleSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListContactFlowModuleVersions

Service: Amazon Connect Service

Retrieves a paginated list of all versions for a specific contact flow module.

Request Syntax

```
GET /contact-flow-modules/InstanceId/ContactFlowModuleId/versions?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowModuleVersionSummaryList": [
      {
         "Arn": "string",
         "Version": number,
         "VersionDescription": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowModuleVersionSummaryList

Information about the flow module versions.

Type: Array of ContactFlowModuleVersionSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Response

This example illustrates one usage of ListContactFlowModuleVersions.

```
{
   "NextToken": "NextTokenId",
   "ContactFlowModuleVersionSummaryList": [
      {
         "Arn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
         "Version": 2,
         "VersionDescription": "Updated customer service module with bug fixes"
      },
      {
         "Arn": "arn:aws:connect:us-
west-2:123456789012:instance/12345678-1234-1234-1234-123456789012/flow-module/
abcdefgh-1234-5678-9012-abcdefghijkl",
         "Version": 1,
         "VersionDescription": "Initial version of the customer service module"
      }
   ]
}
```

ListContactFlows

Service: Amazon Connect Service

Provides information about the flows for the specified Amazon Connect instance.

You can also create and update flows using the Amazon Connect Flow language.

For more information about flows, see Flows in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /contact-flows-summary/InstanceId?
contactFlowTypes=ContactFlowTypes&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowTypes

The type of flow.

Array Members: Maximum number of 10 items.

Valid Values: `CONTACT_FLOW | CUSTOMER_QUEUE | CUSTOMER_HOLD | CUSTOMER_WHISPER | AGENT_HOLD | AGENT_WHISPER | OUTBOUND_WHISPER | AGENT_TRANSFER | QUEUE_TRANSFER | CAMPAIGN`

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowSummaryList": [
      {
         "Arn": "string",
         "ContactFlowState": "string",
         "ContactFlowStatus": "string",
         "ContactFlowType": "string",
         "Id": "string",
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowSummaryList

Information about the flows.

Type: Array of ContactFlowSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListContactFlowVersions

Service: Amazon Connect Service

Returns all the available versions for the specified Amazon Connect instance and flow identifier.

Request Syntax

```
GET /contact-flows/InstanceId/ContactFlowId/versions?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactFlowVersionSummaryList": [
      {
         "Arn": "string",
         "Version": number,
         "VersionDescription": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactFlowVersionSummaryList

A list of flow version summaries.

Type: Array of ContactFlowVersionSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Response

This example illustrates one usage of ListContactFlowVersions.

```
{
   "NextToken": "NextTokenId",
   "ContactFlowVersionSummaryList": [
      {
         "Arn": "[contact_flow_arn]",
         "Version": 1,
         "VersionDescription": "description of the flow version"
      }
   ]
}
```

ListContactReferences

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

For the specified `referenceTypes`, returns a list of references associated with the contact. *References* are links to documents that are related to a contact, such as emails, attachments, or URLs.

Request Syntax

```
GET /contact/references/InstanceId/ContactId?
nextToken=NextToken&referenceTypes=ReferenceTypes HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the initial contact.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

> **Important**
>
> This is not expected to be set, because the value returned in the previous response is always null.

ReferenceTypes

The type of reference.

Array Members: Maximum number of 6 items.

Valid Values: `URL | ATTACHMENT | CONTACT_ANALYSIS | NUMBER | STRING | DATE | EMAIL | EMAIL_MESSAGE | EMAIL_MESSAGE_PLAIN_TEXT`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "ReferenceSummaryList": [
      { ... }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

> **Important**
>
> This is always returned as null in the response.

Type: String

ReferenceSummaryList

Information about the flows.

Type: Array of ReferenceSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListDataTableAttributes

Service: Amazon Connect Service

Returns all attributes for a specified data table. A maximum of 100 attributes per data table is allowed. Customers can request an increase by using AWS Service Quotas. The response can be filtered by specific attribute IDs for CloudFormation integration.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/attributes?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
Content-type: application/json

{
   "AttributeIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table whose attributes should be listed.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data table attributes to return in one page of results.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Request Body

The request accepts the following data in JSON format.

AttributeIds

Optional list of specific attribute IDs to retrieve. Used for CloudFormation to effectively describe attributes by ID. If NextToken is provided, this parameter is ignored.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Attributes": [
      {
         "AttributeId": "string",
         "DataTableArn": "string",
         "DataTableId": "string",
         "Description": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "Name": "string",
         "Primary": boolean,
         "Validation": {
```

```
            "Enum": {
               "Strict": boolean,
               "Values": [ "string" ]
            },
            "ExclusiveMaximum": number,
            "ExclusiveMinimum": number,
            "IgnoreCase": boolean,
            "Maximum": number,
            "MaxLength": number,
            "MaxValues": number,
            "Minimum": number,
            "MinLength": number,
            "MinValues": number,
            "MultipleOf": number
         },
         "ValueType": "string",
         "Version": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Attributes

A list of data table attributes with their complete configuration and metadata.

Type: Array of DataTableAttribute objects

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListDataTablePrimaryValues

Service: Amazon Connect Service

Lists all primary value combinations for a given data table. Returns the unique combinations of primary attribute values that identify records in the table. Up to 100 records are returned per request.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/list-primary?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
Content-type: application/json

{
   "PrimaryAttributeValues": [
      {
         "AttributeName": "string",
         "Values": [ "string" ]
      }
   ],
   "RecordIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table whose primary values should be listed.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data table primary values to return in one page of results.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Request Body

The request accepts the following data in JSON format.

PrimaryAttributeValues

Optional filter to retrieve primary values matching specific criteria.

Type: Array of PrimaryAttributeValueFilter objects

Required: No

RecordIds

Optional list of specific record IDs to retrieve. Used for CloudFormation to effectively describe records by ID. If NextToken is provided, this parameter is ignored.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "PrimaryValuesList": [
```

```
      {
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "PrimaryValues": [
            {
               "AttributeId": "string",
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "RecordId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

PrimaryValuesList

A list of primary value combinations with their record IDs and modification metadata.

Type: Array of RecordPrimaryValue objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

ListDataTables

Service: Amazon Connect Service

Lists all data tables for the specified Amazon Connect instance. Returns summary information for each table including basic metadata and modification details.

Request Syntax

```
GET /data-tables/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The unique identifier for the Amazon Connect instance whose data tables should be listed.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data tables to return in one page of results.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "DataTableSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataTableSummaryList

A list of data table summaries containing basic information about each table including ID, ARN, name, and modification details.

Type: Array of DataTableSummary objects

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

ListDataTableValues

Service: Amazon Connect Service

Lists values stored in a data table with optional filtering by record IDs or primary attribute values. Returns the raw stored values along with metadata such as lock versions and modification timestamps.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/list?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
Content-type: application/json

{
   "PrimaryAttributeValues": [
      {
         "AttributeName": "string",
         "Values": [ "string" ]
      }
   ],
   "RecordIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table whose values should be listed.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data table values to return in one page of results.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Request Body

The request accepts the following data in JSON format.

PrimaryAttributeValues

Optional filter to retrieve values for records matching specific primary attribute criteria.

Type: Array of PrimaryAttributeValueFilter objects

Required: No

RecordIds

Optional list of specific record IDs to retrieve values for.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "Values": [
      {
         "AttributeId": "string",
         "AttributeName": "string",
         "LastModifiedRegion": "string",
```

```
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
         "PrimaryValues": [
            {
               "AttributeId": "string",
               "AttributeName": "string",
               "Value": "string"
            }
         ],
         "RecordId": "string",
         "Value": "string",
         "ValueType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Values

A list of data table values with their associated metadata, lock versions, and modification details.

Type: Array of DataTableValueSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListDefaultVocabularies

Service: Amazon Connect Service

Lists the default vocabularies for the specified Amazon Connect instance.

Request Syntax

```
POST /default-vocabulary-summary/InstanceId HTTP/1.1
Content-type: application/json

{
   "LanguageCode": "string",
   "MaxResults": number,
   "NextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

LanguageCode

The language code of the vocabulary entries. For a list of languages and their corresponding language codes, see What is Amazon Transcribe?

Type: String

Valid Values: `ar-AE | de-CH | de-DE | en-AB | en-AU | en-GB | en-IE | en-IN | en-US | en-WL | es-ES | es-US | fr-CA | fr-FR | hi-IN | it-IT | ja-JP`

```
| ko-KR | pt-BR | pt-PT | zh-CN | en-NZ | en-ZA | ca-ES | da-DK | fi-FI
| id-ID | ms-MY | nl-NL | no-NO | pl-PL | sv-SE | tl-PH
```

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "DefaultVocabularyList": [
      {
         "InstanceId": "string",
         "LanguageCode": "string",
         "VocabularyId": "string",
         "VocabularyName": "string"
      }
   ],
   "NextToken": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DefaultVocabularyList

A list of default vocabularies.

Type: Array of DefaultVocabulary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListEntitySecurityProfiles

Service: Amazon Connect Service

Lists all security profiles attached to a Q in Connect AIAgent Entity in an Amazon Connect instance.

Request Syntax

```
POST /entity-security-profiles-summary/InstanceId HTTP/1.1
Content-type: application/json

{
   "EntityArn": "string",
   "EntityType": "string",
   "MaxResults": number,
   "NextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

EntityArn

ARN of a Q in Connect AI Agent.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

EntityType

Only supported type is AI_AGENT.

Type: String

Valid Values: `USER | AI_AGENT`

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "SecurityProfiles": [
      {
         "Id": "string"
      }
```

```
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

SecurityProfiles

List of Security Profile Object.

Type: Array of SecurityProfileItem objects

Array Members: Maximum number of 100 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListEvaluationForms

Service: Amazon Connect Service

Lists evaluation forms in the specified Amazon Connect instance.

Request Syntax

```
GET /evaluation-forms/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "EvaluationFormSummaryList": [
      {
         "ActiveVersion": number,
         "CreatedBy": "string",
         "CreatedTime": number,
         "EvaluationFormArn": "string",
         "EvaluationFormId": "string",
         "LastActivatedBy": "string",
         "LastActivatedTime": number,
         "LastModifiedBy": "string",
         "LastModifiedTime": number,
         "LatestVersion": number,
         "Title": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormSummaryList

Provides details about a list of evaluation forms belonging to an instance.

Type: Array of EvaluationFormSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example lists all the evaluation forms in an instance. It returns up to 2 results.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "MaxResults": 2
}
```

Sample Response

```
{
   "EvaluationFormSummaryList": [
      {
         "EvaluationFormId": "[evaluation_form_id]",
         "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
         "Title": "form-title",
         "CreatedTime": "2023-05-04T00:24:01.490000-07:00",
         "CreatedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LastModifiedTime": "2023-05-04T00:24:01.490000-07:00",
         "LastModifiedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LatestVersion": 1
      },
      {
         "EvaluationFormId": "[evaluation_form_id]",
         "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
         "Title": "form-title",
         "CreatedTime": "2023-05-04T00:23:55.047000-07:00",
         "CreatedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LastModifiedTime": "2023-05-04T00:23:55.047000-07:00",
         "LastModifiedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LatestVersion": 1
      }
   ],
   "NextToken": "QH7ftooIJZMpObgG6DlPwu/AAABGTCCARUGCSqGSIb"
}
```

ListEvaluationFormVersions

Service: Amazon Connect Service

Lists versions of an evaluation form in the specified Amazon Connect instance.

Request Syntax

```
GET /evaluation-forms/InstanceId/EvaluationFormId/versions?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

The unique identifier for the evaluation form.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationFormVersionSummaryList": [
      {
         "CreatedBy": "string",
         "CreatedTime": number,
         "EvaluationFormArn": "string",
         "EvaluationFormId": "string",
         "EvaluationFormVersion": number,
         "LastModifiedBy": "string",
         "LastModifiedTime": number,
         "Locked": boolean,
         "Status": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormVersionSummaryList

Provides details about a list of evaluation forms belonging to an instance.

Type: Array of EvaluationFormVersionSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example lists the versions of an evaluation form. It returns up to 2 results.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
```

```
   "MaxResults": 2
}
```

Sample Response

```
{
   "EvaluationFormVersionSummaryList": [
      {
         "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
         "EvaluationFormId": "[evaluation_form_id]",
         "EvaluationFormVersion": 1,
         "Locked": true,
         "Status": "DRAFT",
         "CreatedTime": "2023-05-04T00:24:01.490000-07:00",
         "CreatedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LastModifiedTime": "2023-05-04T00:24:01.490000-07:00",
         "LastModifiedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username"
      },
      {
         "EvaluationFormArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/evaluation-form/[evaluation_form_id]",
         "EvaluationFormId": "[evaluation_form_id]",
         "EvaluationFormVersion": 2,
         "Locked": true,
         "Status": "DRAFT",
         "CreatedTime": "2023-05-04T00:31:11.923000-07:00",
         "CreatedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username",
         "LastModifiedTime": "2023-05-04T00:31:11.923000-07:00",
         "LastModifiedBy": "arn:aws:sts::[account_id]:assumed-role/Admin/username"
      }
   ],
   "NextToken": "ki3y3ZDTAKfGXYllAAAAqjCBpwYJKoZIhvcNAQcGoIGZ"
}
```

ListFlowAssociations

Service: Amazon Connect Service

List the flow association based on the filters.

Request Syntax

```
GET /flow-associations-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&ResourceType=ResourceType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

ResourceType

A valid resource type.

Valid Values: `WHATSAPP_MESSAGING_PHONE_NUMBER | VOICE_PHONE_NUMBER | INBOUND_EMAIL | OUTBOUND_EMAIL | ANALYTICS_CONNECTOR`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "FlowAssociationSummaryList": [
      {
         "FlowId": "string",
         "ResourceId": "string",
         "ResourceType": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FlowAssociationSummaryList

Summary of flow associations.

Type: Array of FlowAssociationSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListHoursOfOperationOverrides

Service: Amazon Connect Service

List the hours of operation overrides.

Request Syntax

```
GET /hours-of-operations/InstanceId/HoursOfOperationId/overrides?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperationOverrideList": [
      {
         "Config": [
            {
               "Day": "string",
               "EndTime": {
                  "Hours": number,
                  "Minutes": number
               },
               "StartTime": {
                  "Hours": number,
                  "Minutes": number
               }
            }
         ],
         "Description": "string",
         "EffectiveFrom": "string",
         "EffectiveTill": "string",
         "HoursOfOperationArn": "string",
         "HoursOfOperationId": "string",
         "HoursOfOperationOverrideId": "string",
         "Name": "string",
         "OverrideType": "string",
         "RecurrenceConfig": {
            "RecurrencePattern": {
               "ByMonth": [ number ],
               "ByMonthDay": [ number ],
               "ByWeekdayOccurrence": [ number ],
               "Frequency": "string",
               "Interval": number
            }
         }
      }
   ],
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperationOverrideList

Information about the hours of operation override.

Type: Array of HoursOfOperationOverride objects

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListHoursOfOperations

Service: Amazon Connect Service

Provides information about the hours of operation for the specified Amazon Connect instance.

For more information about hours of operation, see Set the Hours of Operation for a Queue in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /hours-of-operations-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperationSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HoursOfOperationSummaryList

Information about the hours of operation.

Type: Array of HoursOfOperationSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListInstanceAttributes

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of all attribute types for the given instance.

Request Syntax

```
GET /instance/InstanceId/attributes?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 7.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "Attributes": [
      {
         "AttributeType": "string",
         "Value": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Attributes

The attribute types.

Type: Array of Attribute objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListInstances

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Return a list of instances which are in active state, creation-in-progress state, and failed state. Instances that aren't successfully created (they are in a failed state) are returned only for 24 hours after the CreateInstance API was invoked.

Request Syntax

```
GET /instance?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 10.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "InstanceSummaryList": [
      {
         "Arn": "string",
```

```
            "CreatedTime": number,
            "Id": "string",
            "IdentityManagementType": "string",
            "InboundCallsEnabled": boolean,
            "InstanceAccessUrl": "string",
            "InstanceAlias": "string",
            "InstanceStatus": "string",
            "OutboundCallsEnabled": boolean,
            "ServiceRole": "string"
        }
    ],
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

InstanceSummaryList

Information about the instances.

Type: Array of InstanceSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ListInstanceStorageConfigs

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of storage configs for the identified instance and resource type.

Request Syntax

```
GET /instance/InstanceId/storage-configs?
maxResults=MaxResults&nextToken=NextToken&resourceType=ResourceType HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 10.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

ResourceType

A valid resource type.

Valid Values: `CHAT_TRANSCRIPTS | CALL_RECORDINGS | SCHEDULED_REPORTS | MEDIA_STREAMS | CONTACT_TRACE_RECORDS | AGENT_EVENTS |`

REAL_TIME_CONTACT_ANALYSIS_SEGMENTS | ATTACHMENTS | CONTACT_EVALUATIONS | SCREEN_RECORDINGS | REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS | REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS | EMAIL_MESSAGES

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "StorageConfigs": [
      {
         "AssociationId": "string",
         "KinesisFirehoseConfig": {
            "FirehoseArn": "string"
         },
         "KinesisStreamConfig": {
            "StreamArn": "string"
         },
         "KinesisVideoStreamConfig": {
            "EncryptionConfig": {
               "EncryptionType": "string",
               "KeyId": "string"
            },
            "Prefix": "string",
            "RetentionPeriodHours": number
         },
         "S3Config": {
            "BucketName": "string",
            "BucketPrefix": "string",
            "EncryptionConfig": {
               "EncryptionType": "string",
               "KeyId": "string"
            }
         },
```

```
            "StorageType": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

StorageConfigs

A valid storage type.

Type: Array of InstanceStorageConfig objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListIntegrationAssociations

Service: Amazon Connect Service

Provides summary information about the AWS resource associations for the specified Amazon Connect instance.

Request Syntax

```
GET /instance/InstanceId/integration-associations?
integrationArn=IntegrationArn&integrationType=IntegrationType&maxResults=MaxResults&nextToken=N
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

IntegrationArn

The Amazon Resource Name (ARN) of the integration.

IntegrationType

The integration type.

Valid Values: `EVENT | VOICE_ID | PINPOINT_APP | WISDOM_ASSISTANT | WISDOM_KNOWLEDGE_BASE | WISDOM_QUICK_RESPONSES | Q_MESSAGE_TEMPLATES | CASES_DOMAIN | APPLICATION | FILE_SCANNER | SES_IDENTITY | ANALYTICS_CONNECTOR | CALL_TRANSFER_CONNECTOR | COGNITO_USER_POOL | MESSAGE_PROCESSOR`

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "IntegrationAssociationSummaryList": [
      {
         "InstanceId": "string",
         "IntegrationArn": "string",
         "IntegrationAssociationArn": "string",
         "IntegrationAssociationId": "string",
         "IntegrationType": "string",
         "SourceApplicationName": "string",
         "SourceApplicationUrl": "string",
         "SourceType": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

IntegrationAssociationSummaryList

The associations.

Type: Array of IntegrationAssociationSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListLambdaFunctions

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of all Lambda functions that display in the dropdown options in the relevant flow blocks.

Request Syntax

```
GET /instance/InstanceId/lambda-functions?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 25.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LambdaFunctions": [ "string" ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LambdaFunctions

The Lambdafunction ARNs associated with the specified instance.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 140.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListLexBots

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of all the Amazon Lex V1 bots currently associated with the instance. To return both Amazon Lex V1 and V2 bots, use the ListBots API.

Request Syntax

```
GET /instance/InstanceId/lex-bots?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. If no value is specified, the default is 10.

Valid Range: Minimum value of 1. Maximum value of 25.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "LexBots": [
      {
         "LexRegion": "string",
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LexBots

The names and AWS Regions of the Amazon Lex bots associated with the specified instance.

Type: Array of LexBot objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListNotifications

Service: Amazon Connect Service

Retrieves a paginated list of all notifications in the Amazon Connect instance.

Request Syntax

```
GET /notifications/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. Valid range is 1-100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response to retrieve the next page of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "NextToken": "string",
   "NotificationSummaryList": [
      {
         "Arn": "string",
         "Content": {
            "string" : "string"
         },
         "CreatedAt": number,
         "ExpiresAt": number,
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Priority": "string",
         "Recipients": [ "string" ],
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

The token for the next set of results. If present, there are more results available.

Type: String

NotificationSummaryList

A list of notification summaries.

Type: Array of Notification objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListPhoneNumbers

Service: Amazon Connect Service

Provides information about the phone numbers for the specified Amazon Connect instance.

For more information about phone numbers, see Set Up Phone Numbers for Your Contact Center in the *Amazon Connect Administrator Guide*.

Important

- We recommend using ListPhoneNumbersV2 to return phone number types. ListPhoneNumbers doesn't support number types `UIFN`, `SHARED`, `THIRD_PARTY_TF`, and `THIRD_PARTY_DID`. While it returns numbers of those types, it incorrectly lists them as `TOLL_FREE` or `DID`.
- The phone number `Arn` value that is returned from each of the items in the PhoneNumberSummaryList cannot be used to tag phone number resources. It will fail with a `ResourceNotFoundException`. Instead, use the ListPhoneNumbersV2 API. It returns the new phone number ARN that can be used to tag phone number resources.

Request Syntax

```
GET /phone-numbers-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&phoneNumberCountryCodes=PhoneNumberCountryCodes&phone
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

PhoneNumberCountryCodes

The ISO country code.

Array Members: Maximum number of 10 items.

Valid Values: AF | AL | DZ | AS | AD | AO | AI | AQ | AG | AR | AM | AW | AU | AT | AZ | BS | BH | BD | BB | BY | BE | BZ | BJ | BM | BT | BO | BA | BW | BR | IO | VG | BN | BG | BF | BI | KH | CM | CA | CV | KY | CF | TD | CL | CN | CX | CC | CO | KM | CK | CR | HR | CU | CW | CY | CZ | CD | DK | DJ | DM | DO | TL | EC | EG | SV | GQ | ER | EE | ET | FK | FO | FJ | FI | FR | PF | GA | GM | GE | DE | GH | GI | GR | GL | GD | GU | GT | GG | GN | GW | GY | HT | HN | HK | HU | IS | IN | ID | IR | IQ | IE | IM | IL | IT | CI | JM | JP | JE | JO | KZ | KE | KI | KW | KG | LA | LV | LB | LS | LR | LY | LI | LT | LU | MO | MK | MG | MW | MY | MV | ML | MT | MH | MR | MU | YT | MX | FM | MD | MC | MN | ME | MS | MA | MZ | MM | NA | NR | NP | NL | AN | NC | NZ | NI | NE | NG | NU | KP | MP | NO | OM | PK | PW | PA | PG | PY | PE | PH | PN | PL | PT | PR | QA | CG | RE | RO | RU | RW | BL | SH | KN | LC | MF | PM | VC | WS | SM | ST | SA | SN | RS | SC | SL | SG | SX | SK | SI | SB | SO | ZA | KR | ES | LK | SD | SR | SJ | SZ | SE | CH | SY | TW | TJ | TZ | TH | TG | TK | TO | TT | TN | TR | TM | TC | TV | VI | UG | UA | AE | GB | US | UY | UZ | VU | VA | VE | VN | WF | EH | YE | ZM | ZW

PhoneNumberTypes

The type of phone number.

> **Note**
>
> We recommend using ListPhoneNumbersV2 to return phone number types. While ListPhoneNumbers returns number types UIFN, SHARED, THIRD_PARTY_TF, and THIRD_PARTY_DID, it incorrectly lists them as TOLL_FREE or DID.

Array Members: Maximum number of 6 items.

Valid Values: TOLL_FREE | DID | UIFN | SHARED | THIRD_PARTY_TF | THIRD_PARTY_DID | SHORT_CODE

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "PhoneNumberSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "PhoneNumber": "string",
         "PhoneNumberCountryCode": "string",
         "PhoneNumberType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

PhoneNumberSummaryList

Information about the phone numbers.

Type: Array of PhoneNumberSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListPhoneNumbersV2

Service: Amazon Connect Service

Lists phone numbers claimed to your Amazon Connect instance or traffic distribution group. If the provided `TargetArn` is a traffic distribution group, you can call this API in both AWS Regions associated with traffic distribution group.

For more information about phone numbers, see Set Up Phone Numbers for Your Contact Center in the *Amazon Connect Administrator Guide*.

> **Note**
>
> - When given an instance ARN, `ListPhoneNumbersV2` returns only the phone numbers claimed to the instance.
> - When given a traffic distribution group ARN `ListPhoneNumbersV2` returns only the phone numbers claimed to the traffic distribution group.

Request Syntax

```
POST /phone-number/list HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "PhoneNumberCountryCodes": [ "string" ],
   "PhoneNumberPrefix": "string",
   "PhoneNumberTypes": [ "string" ],
   "TargetArn": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance that phone numbers are claimed to. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. If both `TargetArn` and `InstanceId` are not provided, this API lists numbers claimed to all the Amazon Connect instances belonging to your account in the same AWS Region as the request.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Required: No

PhoneNumberCountryCodes

The ISO country code.

Type: Array of strings

Array Members: Maximum number of 10 items.

Valid Values: `AF | AL | DZ | AS | AD | AO | AI | AQ | AG | AR | AM | AW | AU | AT | AZ | BS | BH | BD | BB | BY | BE | BZ | BJ | BM | BT | BO | BA | BW | BR | IO | VG | BN | BG | BF | BI | KH | CM | CA | CV | KY | CF | TD | CL | CN | CX | CC | CO | KM | CK | CR | HR | CU | CW | CY | CZ | CD |`

DK | DJ | DM | DO | TL | EC | EG | SV | GQ | ER | EE | ET | FK | FO | FJ | FI | FR | PF | GA | GM | GE | DE | GH | GI | GR | GL | GD | GU | GT | GG | GN | GW | GY | HT | HN | HK | HU | IS | IN | ID | IR | IQ | IE | IM | IL | IT | CI | JM | JP | JE | JO | KZ | KE | KI | KW | KG | LA | LV | LB | LS | LR | LY | LI | LT | LU | MO | MK | MG | MW | MY | MV | ML | MT | MH | MR | MU | YT | MX | FM | MD | MC | MN | ME | MS | MA | MZ | MM | NA | NR | NP | NL | AN | NC | NZ | NI | NE | NG | NU | KP | MP | NO | OM | PK | PW | PA | PG | PY | PE | PH | PN | PL | PT | PR | QA | CG | RE | RO | RU | RW | BL | SH | KN | LC | MF | PM | VC | WS | SM | ST | SA | SN | RS | SC | SL | SG | SX | SK | SI | SB | SO | ZA | KR | ES | LK | SD | SR | SJ | SZ | SE | CH | SY | TW | TJ | TZ | TH | TG | TK | TO | TT | TN | TR | TM | TC | TV | VI | UG | UA | AE | GB | US | UY | UZ | VU | VA | VE | VN | WF | EH | YE | ZM | ZW

Required: No

PhoneNumberPrefix

The prefix of the phone number. If provided, it must contain + as part of the country code.

Type: String

Pattern: `\\+?[0-9]{1,11}`

Required: No

PhoneNumberTypes

The type of phone number.

Type: Array of strings

Array Members: Maximum number of 6 items.

Valid Values: `TOLL_FREE | DID | UIFN | SHARED | THIRD_PARTY_TF | THIRD_PARTY_DID | SHORT_CODE`

Required: No

TargetArn

The Amazon Resource Name (ARN) for Amazon Connect instances or traffic distribution groups that phone number inbound traffic is routed through. If both `TargetArn` and `InstanceId`

input are not provided, this API lists numbers claimed to all the Amazon Connect instances belonging to your account in the same AWS Region as the request.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ListPhoneNumbersSummaryList": [
      {
         "InstanceId": "string",
         "PhoneNumber": "string",
         "PhoneNumberArn": "string",
         "PhoneNumberCountryCode": "string",
         "PhoneNumberDescription": "string",
         "PhoneNumberId": "string",
         "PhoneNumberType": "string",
         "SourcePhoneNumberArn": "string",
         "TargetArn": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ListPhoneNumbersSummaryList

Information about phone numbers that have been claimed to your Amazon Connect instances or traffic distribution groups.

Type: Array of ListPhoneNumbersSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListPredefinedAttributes

Service: Amazon Connect Service

Lists predefined attributes for the specified Amazon Connect instance. A *predefined attribute* is made up of a name and a value. You can use predefined attributes for:

- Routing proficiency (for example, agent certification) that has predefined values (for example, a list of possible certifications). For more information, see Create predefined attributes for routing contacts to agents.
- Contact information that varies between transfers or conferences, such as the name of the business unit handling the contact. For more information, see Use contact segment attributes.

For the predefined attributes per instance quota, see Amazon Connect quotas.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
GET /predefined-attributes/InstanceId?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "PredefinedAttributeSummaryList": [
      {
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

PredefinedAttributeSummaryList

Summary of the predefined attributes.

Type: Array of PredefinedAttributeSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example shows a request and response.

```
GET https://connect.us-west-2.amazonaws.com/predefined-attributes/InstanceId?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1

Response:
{
    "NextToken": null,
    "PredefinedAttributeSummaryList": [
        {
            "LastModifiedRegion": "us-west-2",
            "LastModifiedTime": 1.75691948693E9,
            "Name": "Name1"
        },
        {
            "LastModifiedRegion": "us-west-2",
            "LastModifiedTime": 1.756919487004E9,
            "Name": "Name2
    ]
}
```

ListPrompts

Service: Amazon Connect Service

Provides information about the prompts for the specified Amazon Connect instance.

Request Syntax

```
GET /prompts-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "NextToken": "string",
   "PromptSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

PromptSummaryList

Information about the prompts.

Type: Array of PromptSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListQueueEmailAddresses

Service: Amazon Connect Service

Lists all email addresses that are currently associated with a specific queue, providing details about which "From" email addresses agents can select when handling email contacts. This helps administrators manage agent email address options and understand the available choices for different brands and business units.

Important things to know

- The response includes metadata about each email address available for agent selection, including whether it's configured as the default outbound email.
- Agents can select from these email addresses when replying to inbound contacts or initiating outbound contacts in this queue.
- The list includes both explicitly associated email addresses and any default outbound email address configured for the queue.
- Results are paginated to handle queues with many associated email addresses (up to 50 per queue).

Request Syntax

```
GET /queues/InstanceId/QueueId/email-addresses?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EmailAddressMetadataList": [
      {
         "Arn": "string",
         "Id": "string",
         "IsDefaultOutboundEmail": boolean
      }
   ],
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EmailAddressMetadataList

List of email address summary information for all email addresses associated with the queue. Each item contains the email address identifier, ARN, and configuration details.

Type: Array of EmailAddressSummary objects

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListQueueQuickConnects

Service: Amazon Connect Service

Lists the quick connects associated with a queue.

Request Syntax

```
GET /queues/InstanceId/QueueId/quick-connects?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string",
   "QuickConnectSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "QuickConnectType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

QuickConnectSummaryList

Information about the quick connects.

Type: Array of QuickConnectSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

ListQueues

Service: Amazon Connect Service

Provides information about the queues for the specified Amazon Connect instance.

If you do not specify a `QueueTypes` parameter, both standard and agent queues are returned. This might cause an unexpected truncation of results if you have more than 1000 agents and you limit the number of results of the API call in code.

For more information about queues, see Queues: Standard and Agent in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /queues-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&queueTypes=QueueTypes HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

QueueTypes

The type of queue.

Array Members: Maximum number of 2 items.

Valid Values: STANDARD | AGENT

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "QueueSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "QueueType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

QueueSummaryList

Information about the queues.

Type: Array of QueueSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListQuickConnects

Service: Amazon Connect Service

Provides information about the quick connects for the specified Amazon Connect instance.

Request Syntax

```
GET /quick-connects/InstanceId?
maxResults=MaxResults&nextToken=NextToken&QuickConnectTypes=QuickConnectTypes HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. Both Instance ID and Instance ARN are supported input formats.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

QuickConnectTypes

The type of quick connect. In the Amazon Connect admin website, when you create a quick connect, you are prompted to assign one of the following types: Agent (USER), External (PHONE_NUMBER), or Queue (QUEUE).

Array Members: Maximum number of 4 items.

Valid Values: USER | QUEUE | PHONE_NUMBER | FLOW

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "QuickConnectSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "QuickConnectType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

QuickConnectSummaryList

Information about the quick connects.

Type: Array of QuickConnectSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListRealtimeContactAnalysisSegmentsV2

Service: Amazon Connect Service

Provides a list of analysis segments for a real-time chat analysis session. This API supports CHAT channels only.

> **Important**
>
> This API does not support VOICE. If you attempt to use it for VOICE, an `InvalidRequestException` occurs.

Request Syntax

```
POST /contact/list-real-time-analysis-segments-v2/InstanceId/ContactId HTTP/1.1
Content-type: application/json

{
   "MaxResults": number,
   "NextToken": "string",
   "OutputType": "string",
   "SegmentTypes": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Required: No

OutputType

The Contact Lens output type to be returned.

Type: String

Valid Values: `Raw | Redacted`

Required: Yes

SegmentTypes

Enum with segment types . Each value corresponds to a segment type returned in the segments list of the API. Each segment type has its own structure. Different channels may have different sets of supported segment types.

Type: Array of strings

Array Members: Maximum number of 6 items.

Valid Values: `Transcript | Categories | Issues | Event | Attachments | PostContactSummary`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Channel": "string",
   "NextToken": "string",
   "Segments": [
      { ... }
   ],
   "Status": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Channel

The channel of the contact.

> **Important**
>
> Only `CHAT` is supported. This API does not support `VOICE`. If you attempt to use it for the VOICE channel, an `InvalidRequestException` error occurs.

Type: String

Valid Values: `VOICE | CHAT`

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Segments

An analyzed transcript or category.

Type: Array of RealtimeContactAnalysisSegment objects

Status

Status of real-time contact analysis.

Type: String

Valid Values: `IN_PROGRESS | FAILED | COMPLETED`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

OutputTypeNotFoundException

Thrown for analyzed content when requested OutputType was not enabled for a given contact. For example, if an OutputType.Raw was requested for a contact that had `RedactedOnly` Redaction policy set in the flow.

HTTP Status Code: 404

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListRoutingProfileManualAssignmentQueues

Service: Amazon Connect Service

Lists the manual assignment queues associated with a routing profile.

Use cases

Following are common uses cases for this API:

- This API returns list of queues where contacts can be manually assigned or picked by an agent who has access to the Worklist app. The user can additionally filter on queues, if they have access to those queues (otherwise a invalid request exception will be thrown).

  For information about how manual contact assignment works in the agent workspace, see the Access the Worklist app in the Amazon Connect agent workspace in the *Amazon Connect Administrator Guide*.

Important things to know

- This API only returns the manual assignment queues associated with a routing profile. Use the ListRoutingProfileQueues API to list the auto assignment queues for the routing profile.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
GET /routing-profiles/InstanceId/RoutingProfileId/manual-assignment-queues?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string",
   "RoutingProfileManualAssignmentQueueConfigSummaryList": [
      {
         "Channel": "string",
         "QueueArn": "string",
         "QueueId": "string",
         "QueueName": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

RoutingProfileManualAssignmentQueueConfigSummaryList

Information about the manual assignment queues associated with the routing profile.

Type: Array of RoutingProfileManualAssignmentQueueConfigSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example request to retrieve the manual assignment queues

Provide instanceId and routingProfileId for which you want to retrieve the manual assignment queues. You can optionally provide MaxResults parameter.

```
PUT https://connect.us-west-2.amazonaws.com/routing-profiles/{{instance_id}}/
{{routingProfileId}}/manual-assignment-queues HTTP/1.1 Content-type: application/json
{
```

```
     "MaxResults": 1
}
```

Example response to list the manual assignment queues

Lists the manual assignment queues associated with the `routingProfileId`. Includes only one result since MaxResults parameter was 1. Also includes a NextToken, which can be used as input to fetch the remaining results.

```
{
    "LastModifiedRegion": "us-west-2",
    "LastModifiedTime": 1.75735455979E9,
    "NextToken":

ListRoutingProfileQueues

Service: Amazon Connect Service

Lists the queues associated with a routing profile.

Request Syntax

```
GET /routing-profiles/InstanceId/RoutingProfileId/queues?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string",
   "RoutingProfileQueueConfigSummaryList": [
      {
         "Channel": "string",
         "Delay": number,
         "Priority": number,
         "QueueArn": "string",
         "QueueId": "string",
         "QueueName": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

RoutingProfileQueueConfigSummaryList

Information about the routing profiles.

Type: Array of RoutingProfileQueueConfigSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListRoutingProfiles

Service: Amazon Connect Service

Provides summary information about the routing profiles for the specified Amazon Connect instance.

For more information about routing profiles, see Routing Profiles and Create a Routing Profile in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /routing-profiles-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "RoutingProfileSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

RoutingProfileSummaryList

Information about the routing profiles.

Type: Array of RoutingProfileSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListRules

Service: Amazon Connect Service

List all rules for the specified Amazon Connect instance.

Request Syntax

```
GET /rules/InstanceId?
eventSourceName=EventSourceName&maxResults=MaxResults&nextToken=NextToken&publishStatus=Publish
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EventSourceName

The name of the event source.

Valid Values: `OnPostCallAnalysisAvailable | OnRealTimeCallAnalysisAvailable | OnRealTimeChatAnalysisAvailable | OnPostChatAnalysisAvailable | OnZendeskTicketCreate | OnZendeskTicketStatusUpdate | OnSalesforceCaseCreate | OnContactEvaluationSubmit | OnMetricDataUpdate | OnCaseCreate | OnCaseUpdate | OnSlaBreach`

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 200.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

PublishStatus

The publish status of the rule.

Valid Values: `DRAFT | PUBLISHED`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "RuleSummaryList": [
      {
         "ActionSummaries": [
            {
               "ActionType": "string"
            }
         ],
         "CreatedTime": number,
         "EventSourceName": "string",
         "LastUpdatedTime": number,
         "Name": "string",
         "PublishStatus": "string",
         "RuleArn": "string",
         "RuleId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

RuleSummaryList

Summary information about a rule.

Type: Array of RuleSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListSecurityKeys

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Returns a paginated list of all security keys associated with the instance.

Request Syntax

```
GET /instance/InstanceId/security-keys?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 2.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NextToken": "string",
   "SecurityKeys": [
      {
         "AssociationId": "string",
         "CreationTime": number,
         "Key": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

SecurityKeys

The security keys.

Type: Array of SecurityKey objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListSecurityProfileApplications

Service: Amazon Connect Service

Returns a list of third-party applications or MCP Servers in a specific security profile.

Request Syntax

```
GET /security-profiles-applications/InstanceId/SecurityProfileId?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

SecurityProfileId

The identifier for the security profle.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Applications": [
      {
         "ApplicationPermissions": [ "string" ],
         "Namespace": "string",
         "Type": "string"
      }
   ],
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Applications

A list of the third-party application's metadata.

Type: Array of Application objects

Array Members: Maximum number of 10 items.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListSecurityProfileFlowModules

Service: Amazon Connect Service

A list of Flow Modules an AI Agent can invoke as a tool

Request Syntax

```
GET /security-profiles-flow-modules/InstanceId/SecurityProfileId?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

SecurityProfileId

The identifier for the security profile.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AllowedFlowModules": [
      {
         "FlowModuleId": "string",
         "Type": "string"
      }
   ],
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AllowedFlowModules

A list of Flow Modules an AI Agent can invoke as a tool.

Type: Array of FlowModule objects

Array Members: Maximum number of 10 items.

LastModifiedRegion

The Region that flow module was last modified in.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The time the flow module was last modified.

Type: Timestamp

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListSecurityProfilePermissions

Service: Amazon Connect Service

Lists the permissions granted to a security profile.

For information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
GET /security-profiles-permissions/InstanceId/SecurityProfileId?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

SecurityProfileId

The identifier for the security profle.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string",
   "Permissions": [ "string" ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The AWS Region where this resource was last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when this resource was last modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Permissions

The permissions granted to the security profile. For a complete list of valid permissions, see List of security profile permissions.

Type: Array of strings

Array Members: Maximum number of 500 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListSecurityProfiles

Service: Amazon Connect Service

Provides summary information about the security profiles for the specified Amazon Connect instance.

For more information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
GET /security-profiles-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "SecurityProfileSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

SecurityProfileSummaryList

Information about the security profiles.

Type: Array of SecurityProfileSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTagsForResource

Service: Amazon Connect Service

Lists the tags for the specified resource.

For sample policies that use tags, see Amazon Connect Identity-Based Policy Examples in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /tags/resourceArn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The Amazon Resource Name (ARN) of the resource. All Amazon Connect resources (instances, queues, flows, routing profiles, etc) have an ARN. To locate the ARN for an instance, for example, see Find your Amazon Connect instance ID/ARN.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags

Information about the tags.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTaskTemplates

Service: Amazon Connect Service

Lists task templates for the specified Amazon Connect instance.

Request Syntax

```
GET /instance/InstanceId/task/template?
maxResults=MaxResults&name=Name&nextToken=NextToken&status=Status HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

> **Important**
>
> It is not expected that you set this.

Valid Range: Minimum value of 1. Maximum value of 100.

Name

The name of the task template.

Length Constraints: Minimum length of 1. Maximum length of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

> **Important**
>
> It is not expected that you set this because the value returned in the previous response is always null.

Status

Marks a template as `ACTIVE` or `INACTIVE` for a task to refer to it. Tasks can only be created from `ACTIVE` templates. If a template is marked as `INACTIVE`, then a task that refers to this template cannot be created.

Valid Values: `ACTIVE | INACTIVE`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "TaskTemplates": [
      {
         "Arn": "string",
         "CreatedTime": number,
         "Description": "string",
         "Id": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Status": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

> **Important**
>
> This is always returned as a null in the response.

Type: String

TaskTemplates

Provides details about a list of task templates belonging to an instance.

Type: Array of TaskTemplateMetadata objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTestCaseExecutionRecords

Service: Amazon Connect Service

Lists detailed steps of test case execution that includes all observations along with actions taken and data associated in the specified Amazon Connect instance.

Request Syntax

```
GET /test-cases/InstanceId/TestCaseId/TestCaseExecutionId/records?
maxResults=MaxResults&nextToken=NextToken&status=Status HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Status

Filter execution records by status.

Valid Values: `INITIATED | PASSED | FAILED | IN_PROGRESS | STOPPED`

TestCaseExecutionId

The identifier of the test case execution.

Length Constraints: Maximum length of 500.

Required: Yes

TestCaseId

The identifier of the test case.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ExecutionRecords": [
      {
         "ObservationId": "string",
         "Record": "string",
         "Status": "string",
         "Timestamp": number
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ExecutionRecords

An array of test case execution record objects.

Type: Array of ExecutionRecord objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Ruby V3

ListTestCaseExecutions

Service: Amazon Connect Service

Lists all test case executions and allows filtering by test case id, test case name, start time, end time or status of the execution for the specified Amazon Connect instance.

Request Syntax

```
GET /test-case-executions/InstanceId?
endTime=EndTime&maxResults=MaxResults&nextToken=NextToken&startTime=StartTime&status=Status&tes
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

EndTime

Filter executions that started before this time.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

StartTime

Filter executions that started after this time.

Status

Filter executions by status.

Valid Values: `INITIATED | PASSED | FAILED | IN_PROGRESS | STOPPED`

TestCaseId

Filter executions by test case identifier.

Length Constraints: Maximum length of 500.

TestCaseName

Filter executions by test case name.

Length Constraints: Minimum length of 1.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "TestCaseExecutions": [
      {
         "EndTime": number,
         "StartTime": number,
         "Tags": {
            "string" : "string"
         },
         "TestCaseExecutionId": "string",
         "TestCaseExecutionStatus": "string",
         "TestCaseId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

TestCaseExecutions

An array of test case execution summary objects.

Type: Array of TestCaseExecution objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTestCases

Service: Amazon Connect Service

Lists the test cases present in the specific Amazon Connect instance.

Request Syntax

```
GET /test-cases-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "NextToken": "string",
   "TestCaseSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Status": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

TestCaseSummaryList

Information about the tests.

Type: Array of TestCaseSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

ListTrafficDistributionGroups

Service: Amazon Connect Service

Lists traffic distribution groups.

Request Syntax

```
GET /traffic-distribution-groups?
instanceId=InstanceId&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 10.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NextToken": "string",
   "TrafficDistributionGroupSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "InstanceArn": "string",
         "IsDefault": boolean,
         "Name": "string",
         "Status": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

TrafficDistributionGroupSummaryList

A list of traffic distribution groups.

Type: Array of TrafficDistributionGroupSummary objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTrafficDistributionGroupUsers

Service: Amazon Connect Service

Lists traffic distribution group users.

Request Syntax

```
GET /traffic-distribution-group/TrafficDistributionGroupId/user?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 10.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

TrafficDistributionGroupId

The identifier of the traffic distribution group. This can be the ID or the ARN if the API is being called in the Region where the traffic distribution group was created. The ARN must be provided if the call is from the replicated Region.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "TrafficDistributionGroupUserSummaryList": [
      {
         "UserId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

TrafficDistributionGroupUserSummaryList

A list of traffic distribution group users.

Type: Array of TrafficDistributionGroupUserSummary objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example lists traffic distribution group users.

Sample Request

```
GET connect.[region].amazonaws.com/traffic-distribution-group/
[traffic_distribution_group_id]/user
```

Sample Response

```
{
   "TrafficDistributionGroupUserSummaryList": [
      {
         "UserId": "[user_id]"
      }
   ]
}
```

ListUseCases

Service: Amazon Connect Service

Lists the use cases for the integration association.

Request Syntax

```
GET /instance/InstanceId/integration-associations/IntegrationAssociationId/use-cases?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

IntegrationAssociationId

The identifier for the integration association.

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "UseCaseSummaryList": [
      {
         "UseCaseArn": "string",
         "UseCaseId": "string",
         "UseCaseType": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

UseCaseSummaryList

The use cases.

Type: Array of UseCase objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUserHierarchyGroups

Service: Amazon Connect Service

Provides summary information about the hierarchy groups for the specified Amazon Connect instance.

For more information about agent hierarchies, see Set Up Agent Hierarchies in the *Amazon Connect Administrator Guide*.

Request Syntax

```
GET /user-hierarchy-groups-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "UserHierarchyGroupSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

UserHierarchyGroupSummaryList

Information about the hierarchy groups.

Type: Array of HierarchyGroupSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUserNotifications

Service: Amazon Connect Service

Retrieves a paginated list of notifications for a specific user, including the notification status for that user.

Request Syntax

```
GET /users/InstanceId/UserId/notifications?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. Valid range is 1-1000.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response to retrieve the next page of results.

UserId

The identifier of the user.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "UserNotifications": [
      {
         "Content": {
            "string" : "string"
         },
         "CreatedAt": number,
         "ExpiresAt": number,
         "InstanceId": "string",
         "NotificationId": "string",
         "NotificationStatus": "string",
         "Priority": "string",
         "RecipientId": "string",
         "Source": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

The token for the next set of results. If present, there are more results available.

Type: String

UserNotifications

A list of notifications sent to the specified user.

Type: Array of UserNotificationSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUserProficiencies

Service: Amazon Connect Service

Lists proficiencies associated with a user.

Request Syntax

```
GET /users/InstanceId/UserId/proficiencies?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

UserId

The identifier of the user account.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LastModifiedRegion": "string",
   "LastModifiedTime": number,
   "NextToken": "string",
   "UserProficiencyList": [
      {
         "AttributeName": "string",
         "AttributeValue": "string",
         "Level": number
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LastModifiedRegion

The region in which a user's proficiencies were last modified.

Type: String

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The last time that the user's proficiencies are were modified.

Type: Timestamp

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

UserProficiencyList

Information about the user proficiencies.

Type: Array of UserProficiency objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUsers

Service: Amazon Connect Service

Provides summary information about the users for the specified Amazon Connect instance.

Request Syntax

```
GET /users-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "NextToken": "string",
   "UserSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Username": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

UserSummaryList

Information about the users.

Type: Array of UserSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListViews

Service: Amazon Connect Service

Returns views in the given instance.

Results are sorted primarily by type, and secondarily by name.

Request Syntax

```
GET /views/InstanceId?maxResults=MaxResults&nextToken=NextToken&type=Type HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^[a-zA-Z0-9=\/+_.-]+$`

Type

The type of the view.

Valid Values: CUSTOMER_MANAGED | AWS_MANAGED

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "ViewsSummaryList": [
      {
         "Arn": "string",
         "Description": "string",
         "Id": "string",
         "Name": "string",
         "Status": "string",
         "Type": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: ^[a-zA-Z0-9=\/+_.-]+$

ViewsSummaryList

A list of view summaries.

Type: Array of ViewSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

ListViewVersions

Service: Amazon Connect Service

Returns all the available versions for the specified Amazon Connect instance and view identifier.

Results will be sorted from highest to lowest.

Request Syntax

```
GET /views/InstanceId/ViewId/versions?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

MaxResults

The maximum number of results to return per page. The default MaxResult size is 100.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^[a-zA-Z0-9=\/+_.-]+$`

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "ViewVersionSummaryList": [
      {
         "Arn": "string",
         "Description": "string",
         "Id": "string",
         "Name": "string",
         "Type": "string",
         "Version": number,
         "VersionDescription": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^[a-zA-Z0-9=\/+_.-]+$`

ViewVersionSummaryList

A list of view version summaries.

Type: Array of ViewVersionSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

ListWorkspaceMedia

Service: Amazon Connect Service

Lists media assets (such as logos) associated with a workspace.

Request Syntax

```
GET /workspaces/InstanceId/WorkspaceId/media HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Media": [
      {
```

```
            "Source": "string",
            "Type": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Media

A list of media assets for the workspace.

Type: Array of MediaItem objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListWorkspacePages

Service: Amazon Connect Service

Lists the page configurations in a workspace, including the views assigned to each page.

Request Syntax

```
GET /workspaces/InstanceId/WorkspaceId/pages?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "WorkspacePageList": [
      {
         "InputData": "string",
         "Page": "string",
         "ResourceArn": "string",
         "Slug": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

WorkspacePageList

A list of page configurations in the workspace.

Type: Array of WorkspacePage objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListWorkspaces

Service: Amazon Connect Service

Lists the workspaces in an Amazon Connect instance.

Request Syntax

```
GET /workspaces/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "NextToken": "string",
   "WorkspaceSummaryList": [
      {
         "Arn": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

WorkspaceSummaryList

A summary list of workspaces.

Type: Array of WorkspaceSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

MonitorContact

Service: Amazon Connect Service

Initiates silent monitoring of a contact. The Contact Control Panel (CCP) of the user specified by *userId* will be set to silent monitoring mode on the contact.

Request Syntax

```
POST /contact/monitor HTTP/1.1
Content-type: application/json

{
   "AllowedMonitorCapabilities": [ "string" ],
   "ClientToken": "string",
   "ContactId": "string",
   "InstanceId": "string",
   "UserId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

AllowedMonitorCapabilities

Specify which monitoring actions the user is allowed to take. For example, whether the user is allowed to escalate from silent monitoring to barge. AllowedMonitorCapabilities is required if barge is enabled.

Type: Array of strings

Array Members: Maximum number of 2 items.

Valid Values: `SILENT_MONITOR | BARGE`

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "ContactArn": "string",
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactArn

The ARN of the contact.

Type: String

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

PauseContact

Service: Amazon Connect Service

Allows pausing an ongoing task contact.

Request Syntax

```
POST /contact/pause HTTP/1.1
Content-type: application/json

{
   "ContactFlowId": "string",
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactFlowId

The identifier of the flow.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

PutUserStatus

Service: Amazon Connect Service

Changes the current status of a user or agent in Amazon Connect. If the agent is currently handling a contact, this sets the agent's next status.

For more information, see Agent status and Set your next status in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /users/InstanceId/UserId/status HTTP/1.1
Content-type: application/json

{
   "AgentStatusId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AgentStatusId

The identifier of the agent status.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ReleasePhoneNumber

Service: Amazon Connect Service

Releases a phone number previously claimed to an Amazon Connect instance or traffic distribution group. You can call this API only in the AWS Region where the number was claimed.

> **Important**
>
> To release phone numbers from a traffic distribution group, use the `ReleasePhoneNumber` API, not the Amazon Connect admin website.
> After releasing a phone number, the phone number enters into a cooldown period for up to 180 days. It cannot be searched for or claimed again until the period has ended. If you accidentally release a phone number, contact Support.

If you plan to claim and release numbers frequently, contact us for a service quota exception. Otherwise, it is possible you will be blocked from claiming and releasing any more numbers until up to 180 days past the oldest number released has expired.

By default you can claim and release up to 200% of your maximum number of active phone numbers. If you claim and release phone numbers using the UI or API during a rolling 180 day cycle that exceeds 200% of your phone number service level quota, you will be blocked from claiming any more numbers until 180 days past the oldest number released has expired.

For example, if you already have 99 claimed numbers and a service level quota of 99 phone numbers, and in any 180 day period you release 99, claim 99, and then release 99, you will have exceeded the 200% limit. At that point you are blocked from claiming any more numbers until you open an AWS support ticket.

Request Syntax

```
DELETE /phone-number/PhoneNumberId?clientToken=ClientToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Length Constraints: Maximum length of 500.

PhoneNumberId

A unique identifier for the phone number.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ReplicateInstance

Service: Amazon Connect Service

Replicates an Amazon Connect instance in the specified AWS Region and copies configuration information for Amazon Connect resources across AWS Regions.

For more information about replicating an Amazon Connect instance, see Create a replica of your existing Amazon Connect instance in the *Amazon Connect Administrator Guide*.

Request Syntax

```
POST /instance/InstanceId/replicate HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ReplicaAlias": "string",
   "ReplicaRegion": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. You can provide the `InstanceId`, or the entire ARN.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ReplicaAlias

The alias for the replicated instance. The `ReplicaAlias` must be unique.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 45.

Pattern: `^(?!d-)([\da-zA-Z]+)([-]*[\da-zA-Z])*$`

Required: Yes

ReplicaRegion

The AWS Region where to replicate the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 8. Maximum length of 31.

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
```

```
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) of the replicated instance.

Type: String

Id

The identifier of the replicated instance. You can find the `instanceId` in the ARN of the instance. The replicated instance has the same identifier as the instance it was replicated from.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ResourceNotReadyException

The resource is not ready.

HTTP Status Code: 409

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ResumeContact

Service: Amazon Connect Service

Allows resuming a task contact in a paused state.

Request Syntax

```
POST /contact/resume HTTP/1.1
Content-type: application/json

{
   "ContactFlowId": "string",
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactFlowId

The identifier of the flow.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ResumeContactRecording

Service: Amazon Connect Service

When a contact is being recorded, and the recording has been suspended using SuspendContactRecording, this API resumes recording whatever recording is selected in the flow configuration: call, screen, or both. If only call recording or only screen recording is enabled, then it would resume.

Voice and screen recordings are supported.

Request Syntax

```
POST /contact/resume-recording HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "ContactRecordingType": "string",
   "InitialContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

ContactRecordingType

The type of recording being operated on.

Type: String

Valid Values: `AGENT | IVR | SCREEN`

Required: No

InitialContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

SearchAgentStatuses

Service: Amazon Connect Service

Searches AgentStatuses in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-agent-statuses HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "AgentStatusSearchCriteria"
      ],
      "OrConditions": [
         "AgentStatusSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
```

```
                    }
                ]
            }
        ],
        "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
        }
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return agent statuses.

Type: AgentStatusSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: AgentStatusSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AgentStatuses": [
      {
         "AgentStatusARN": "string",
         "AgentStatusId": "string",
         "Description": "string",
         "DisplayOrder": number,
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "State": "string",
         "Tags": {
            "string" : "string"
         },
         "Type": "string"
      }
   ],
```

```
    "ApproximateTotalCount": number,
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AgentStatuses

The search criteria to be used to return agent statuses.

Type: Array of AgentStatus objects

ApproximateTotalCount

The total number of agent statuses which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchAvailablePhoneNumbers

Service: Amazon Connect Service

Searches for available phone numbers that you can claim to your Amazon Connect instance or traffic distribution group. If the provided `TargetArn` is a traffic distribution group, you can call this API in both AWS Regions associated with the traffic distribution group.

Request Syntax

```
POST /phone-number/search-available HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "PhoneNumberCountryCode": "string",
   "PhoneNumberPrefix": "string",
   "PhoneNumberType": "string",
   "TargetArn": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance that phone numbers are claimed to. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. You must enter `InstanceId` or `TargetArn`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 10.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Required: No

PhoneNumberCountryCode

The ISO country code.

Type: String

Valid Values: AF | AL | DZ | AS | AD | AO | AI | AQ | AG | AR | AM | AW | AU | AT | AZ | BS | BH | BD | BB | BY | BE | BZ | BJ | BM | BT | BO | BA | BW | BR | IO | VG | BN | BG | BF | BI | KH | CM | CA | CV | KY | CF | TD | CL | CN | CX | CC | CO | KM | CK | CR | HR | CU | CW | CY | CZ | CD | DK | DJ | DM | DO | TL | EC | EG | SV | GQ | ER | EE | ET | FK | FO | FJ | FI | FR | PF | GA | GM | GE | DE | GH | GI | GR | GL | GD | GU | GT | GG | GN | GW | GY | HT | HN | HK | HU | IS | IN | ID | IR | IQ | IE | IM | IL | IT | CI | JM | JP | JE | JO | KZ | KE | KI | KW | KG | LA | LV | LB | LS | LR | LY | LI | LT | LU | MO | MK | MG | MW | MY | MV | ML | MT | MH | MR | MU | YT | MX | FM | MD | MC | MN | ME | MS | MA | MZ | MM | NA | NR | NP | NL | AN | NC | NZ | NI | NE | NG | NU | KP | MP | NO | OM | PK | PW | PA | PG | PY | PE | PH | PN | PL | PT | PR | QA | CG | RE | RO | RU | RW | BL | SH | KN | LC | MF | PM | VC | WS | SM | ST | SA | SN | RS | SC | SL | SG | SX | SK | SI | SB | SO | ZA | KR | ES | LK | SD | SR | SJ | SZ | SE | CH | SY | TW | TJ | TZ | TH | TG | TK | TO | TT | TN

| TR | TM | TC | TV | VI | UG | UA | AE | GB | US | UY | UZ | VU | VA | VE | VN | WF | EH | YE | ZM | ZW

Required: Yes

PhoneNumberPrefix

The prefix of the phone number. If provided, it must contain + as part of the country code.

Type: String

Pattern: \\+?[0-9]{1,11}

Required: No

PhoneNumberType

The type of phone number.

Type: String

Valid Values: TOLL_FREE | DID | UIFN | SHARED | THIRD_PARTY_TF | THIRD_PARTY_DID | SHORT_CODE

Required: Yes

TargetArn

The Amazon Resource Name (ARN) for Amazon Connect instances or traffic distribution groups that phone number inbound traffic is routed through. You must enter InstanceId or TargetArn.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AvailableNumbersList": [
```

```
      {
         "PhoneNumber": "string",
         "PhoneNumberCountryCode": "string",
         "PhoneNumberType": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AvailableNumbersList

A list of available phone numbers that you can claim to your Amazon Connect instance or traffic distribution group.

Type: Array of AvailableNumberSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchContactEvaluations

Service: Amazon Connect Service

Searches contact evaluations in an Amazon Connect instance, with optional filtering.

Use cases

Following are common uses cases for this API:

- Find contact evaluations by using specific search criteria.
- Find contact evaluations that are tagged with a specific set of tags.

Important things to know

- A Search operation, unlike a List operation, takes time to index changes to resource (create, update or delete). If you don't see updated information for recently changed contact evaluations, try calling the API again in a few seconds.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /search-contact-evaluations HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "EvaluationSearchCriteria"
      ],
      "BooleanCondition": {
         "ComparisonType": "string",
         "FieldName": "string"
      },
      "DateTimeCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "MaxValue": "string",
```

```
            "MinValue": "string"
         },
         "DecimalCondition": {
            "ComparisonType": "string",
            "FieldName": "string",
            "MaxValue": number,
            "MinValue": number
         },
         "NumberCondition": {
            "ComparisonType": "string",
            "FieldName": "string",
            "MaxValue": number,
            "MinValue": number
         },
         "OrConditions": [
            "EvaluationSearchCriteria"
         ],
         "StringCondition": {
            "ComparisonType": "string",
            "FieldName": "string",
            "Value": "string"
         }
      },
      "SearchFilter": {
         "AttributeFilter": {
            "AndCondition": {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
                  }
               ]
            },
            "OrConditions": [
               {
                  "TagConditions": [
                     {
                        "TagKey": "string",
                        "TagValue": "string"
                     }
                  ]
               }
            ],
            "TagCondition": {
```

```
            "TagKey": "string",
            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Required: No

SearchCriteria

The search criteria to be used to return contact evaluations.

Type: EvaluationSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: EvaluationSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "EvaluationSearchSummaryList": [
      {
         "CreatedTime": number,
         "EvaluationArn": "string",
         "EvaluationFormId": "string",
         "EvaluationFormTitle": "string",
         "EvaluationFormVersion": number,
         "EvaluationId": "string",
         "EvaluationType": "string",
         "LastModifiedTime": number,
         "Metadata": {
            "AcknowledgedBy": "string",
            "AcknowledgedTime": number,
            "AcknowledgerComment": "string",
            "AutoEvaluationEnabled": boolean,
            "AutoEvaluationStatus": "string",
            "CalibrationSessionId": "string",
            "ContactAgentId": "string",
            "ContactId": "string",
            "ContactParticipantId": "string",
```

```
            "ContactParticipantRole": "string",
            "EvaluatorArn": "string",
            "ReviewId": "string",
            "SamplingJobId": "string",
            "ScoreAutomaticFail": boolean,
            "ScoreNotApplicable": boolean,
            "ScorePercentage": number
         },
         "Status": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of contact evaluations that matched your search query.

Type: Long

EvaluationSearchSummaryList

Contains information about contact evaluations.

Type: Array of EvaluationSearchSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example request to retrieve evaluations in instance

This example illustrates one usage of SearchContactEvaluations.

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef"
}
```

Example request to retrieve an evaluation with a specific ID in instance

This example illustrates one usage of SearchContactEvaluations.

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
  "SearchCriteria": {
    "StringCondition": {
      "ComparisonType": "EXACT",
      "FieldName": "EvaluationId",
      "Value": "87654321-4321-8765-bbaa-abcdef123456"
    }
  }
}
```

Example request to retrieve evaluations by using multiple search criteria

This example illustrates one usage of SearchContactEvaluations.

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
  "SearchCriteria": {
    "OrConditions": [
      {
        "AndConditions": [
          {
            "DateTimeCondition": {
              "ComparisonType": "GREATER_THAN",
              "FieldName": "LastModifiedTime",
              "MinValue": "2020-01-01T00:00:00Z"
            }
          },
```

```
          {
            "NumberCondition": {
              "ComparisonType": "EQUAL",
              "FieldName": "EvaluationFormVersion",
              "MinValue": 1
            }
          },
          {
            "BooleanCondition": {
              "ComparisonType": "IS_FALSE",
              "FieldName": "AutoEvaluationEnabled"
            }
          }
        ]
      }
    ]
  }
}
```

SearchContactFlowModules

Service: Amazon Connect Service

Searches the flow modules in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-contact-flow-modules HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "ContactFlowModuleSearchCriteria"
      ],
      "OrConditions": [
         "ContactFlowModuleSearchCriteria"
      ],
      "StateCondition": "string",
      "StatusCondition": "string",
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
```

```
            ]
         ],
         "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return flow modules.

> **Note**
>
> The `name` and `description` fields support "contains" queries with a minimum of 2 characters and a maximum of 25 characters. Any queries with character lengths outside of this range will result in invalid results.

Type: ContactFlowModuleSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: ContactFlowModuleSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "ContactFlowModules": [
      {
         "Arn": "string",
         "Content": "string",
         "Description": "string",
         "ExternalInvocationConfiguration": {
            "Enabled": boolean
         },
         "FlowModuleContentSha256": "string",
```

```
         "Id": "string",
         "Name": "string",
         "Settings": "string",
         "State": "string",
         "Status": "string",
         "Tags": {
            "string" : "string"
         },
         "Version": number,
         "VersionDescription": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of flows which matched your search query.

Type: Long

ContactFlowModules

The search criteria to be used to return flow modules.

Type: Array of ContactFlowModule objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchContactFlows

Service: Amazon Connect Service

Searches the flows in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-contact-flows HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "ContactFlowSearchCriteria"
      ],
      "OrConditions": [
         "ContactFlowSearchCriteria"
      ],
      "StateCondition": "string",
      "StatusCondition": "string",
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      },
      "TypeCondition": "string"
   },
   "SearchFilter": {
      "FlowAttributeFilter": {
         "AndCondition": {
            "ContactFlowTypeCondition": {
               "ContactFlowType": "string"
            },
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
```

```
            "ContactFlowTypeCondition": {
               "ContactFlowType": "string"
            },
            "OrConditions": [
               {
                  "ContactFlowTypeCondition": {

                  "TagKey": "string",
                  "TagValue": "string"
               }
            ],
            "OrConditions": [
               [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
                  }
               ]
            ],
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
   }
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return flows.

> **Note**
>
> The `name` and `description` fields support "contains" queries with a minimum of 2 characters and a maximum of 25 characters. Any queries with character lengths outside of this range will result in invalid results.

Type: ContactFlowSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: ContactFlowSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "ContactFlows": [
      {
         "Arn": "string",
         "Content": "string",
         "Description": "string",
         "FlowContentSha256": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "State": "string",
         "Status": "string",
         "Tags": {
            "string" : "string"
         },
         "Type": "string",
```

```
            "Version": number,
            "VersionDescription": "string"
        }
    ],
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of flows which matched your search query.

Type: Long

ContactFlows

Information about the flows.

Type: Array of ContactFlow objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchContacts

Service: Amazon Connect Service

Searches contacts in an Amazon Connect instance.

Request Syntax

```
POST /search-contacts HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "ActiveRegions": [ "string" ],
      "AdditionalTimeRange": {
         "Criteria": [
            {
               "TimeRange": {
                  "EndTime": number,
                  "StartTime": number,
                  "Type": "string"
               },
               "TimestampCondition": {
                  "ConditionType": "string",
                  "Type": "string"
               }
            }
         ],
         "MatchType": "string"
      },

      "TimeRange": {
         "EndTime": number,
         "StartTime": number,
         "Type": "string"
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

Required: No

SearchCriteria

The search criteria to be used to return contacts.

Type: SearchCriteria object

Required: No

Sort

Specifies a field to sort by and a sort order.

Type: Sort object

Required: No

TimeRange

Time range that you want to search results.

Type: SearchContactsTimeRange object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Contacts": [
      {
         "AgentInfo": {
            "ConnectedToAgentTimestamp": number,
            "Id": "string"
         },
         "Arn": "string",
         "Channel": "string",
         "DisconnectTimestamp": number,
         "GlobalResiliencyMetadata": {
            "ActiveRegion": "string",

                  }
               },
               "ValueString": "string"
            }
         },
         "Tags": {
            "string" : "string"
         }
      }
   ],
   "NextToken": "string",
   "TotalCount": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Contacts

Information about the contacts.

Type: Array of ContactSearchSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100000.

TotalCount

The total number of contacts which matched your search query.

Type: Long

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchDataTables

Service: Amazon Connect Service

Searches for data tables based on the table's ID, name, and description. In the future, this operation can support searching on attribute names and possibly primary values. Follows other search operations closely and supports both search criteria and filters.

Request Syntax

```
POST /search-data-tables HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "DataTableSearchCriteria"
      ],
      "OrConditions": [
         "DataTableSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
```

```
                    "TagKey": "string",
                    "TagValue": "string"
                }
            ]
        }
    ],
    "TagCondition": {
        "TagKey": "string",
        "TagValue": "string"
    }
  }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The unique identifier for the Amazon Connect instance to search within.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of data tables to return in one page of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Required: No

SearchCriteria

Search criteria including string conditions for matching table names, descriptions, or resource IDs. Supports STARTS_WITH, CONTAINS, and EXACT comparison types.

Type: DataTableSearchCriteria object

Required: No

SearchFilter

Optional filters to apply to the search results, such as tag-based filtering for attribute-based access control.

Type: DataTableSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "DataTables": [
      {
         "Arn": "string",
         "CreatedTime": number,
         "Description": "string",
         "Id": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "LockVersion": {
            "Attribute": "string",
            "DataTable": "string",
            "PrimaryValues": "string",
            "Value": "string"
         },
```

```
            "Name": "string",
            "Status": "string",
            "Tags": {
               "string" : "string"
            },
            "TimeZone": "string",
            "ValueLockLevel": "string",
            "Version": "string",
            "VersionDescription": "string"
         }
      ],
      "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate number of data tables that matched the search criteria.

Type: Long

DataTables

An array of data tables matching the search criteria with the same structure as DescribeTable except Version, VersionDescription, and LockVersion are omitted.

Type: Array of DataTable objects

NextToken

Specify the pagination token from a previous request to retrieve the next page of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchEmailAddresses

Service: Amazon Connect Service

Searches email address in an instance, with optional filtering.

Request Syntax

```
POST /search-email-addresses HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "EmailAddressSearchCriteria"
      ],
      "OrConditions": [
         "EmailAddressSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         ],
```

```
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return email addresses.

Type: EmailAddressSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: EmailAddressSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "EmailAddresses": [
      {
         "AliasConfigurations": [
            {
               "EmailAddressId": "string"
            }
         ],
         "Description": "string",
         "DisplayName": "string",
         "EmailAddress": "string",
         "EmailAddressArn": "string",
         "EmailAddressId": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of email addresses which matched your search query.

Type: Long

EmailAddresses

List of email addresses matching SearchFilter and SearchCriteria

Type: Array of EmailAddressMetadata objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchEvaluationForms

Service: Amazon Connect Service

Searches evaluation forms in an Amazon Connect instance, with optional filtering.

Use cases

Following are common uses cases for this API:

- List all evaluation forms in an instance.
- Find all evaluation forms that meet specific criteria, such as Title, Description, Status, and more.
- Find all evaluation forms that are tagged with a specific set of tags.

Important things to know

- A Search operation, unlike a List operation, takes time to index changes to resource (create, update or delete). If you don't see updated information for recently changed contact evaluations, try calling the API again in a few seconds.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /search-evaluation-forms HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "EvaluationFormSearchCriteria"
      ],
      "BooleanCondition": {
         "ComparisonType": "string",
         "FieldName": "string"
      },
      "DateTimeCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
```

```
            "MaxValue": "string",
            "MinValue": "string"
         },
         "NumberCondition": {
            "ComparisonType": "string",
            "FieldName": "string",
            "MaxValue": number,
            "MinValue": number
         },
         "OrConditions": [
            "EvaluationFormSearchCriteria"
         ],
         "StringCondition": {
            "ComparisonType": "string",
            "FieldName": "string",
            "Value": "string"
         }
      },
      "SearchFilter": {
         "AttributeFilter": {
            "AndCondition": {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
                  }
               ]
            },
            "OrConditions": [
               {
                  "TagConditions": [
                     {
                        "TagKey": "string",
                        "TagValue": "string"
                     }
                  ]
               }
            ],
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
```

```
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Required: No

SearchCriteria

The search criteria to be used to return evaluation forms.

Type: EvaluationFormSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: EvaluationFormSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "EvaluationFormSearchSummaryList": [
      {
         "ActiveVersion": number,
         "AutoEvaluationEnabled": boolean,
         "ContactInteractionType": "string",
         "CreatedBy": "string",
         "CreatedTime": number,
         "Description": "string",
         "EvaluationFormArn": "string",
         "EvaluationFormId": "string",
         "EvaluationFormLanguage": "string",
         "LastActivatedBy": "string",
         "LastActivatedTime": number,
         "LastModifiedBy": "string",
         "LastModifiedTime": number,
         "LatestVersion": number,
         "Status": "string",
         "Tags": {
            "string" : "string"
         },
         "Title": "string"
      }
   ],
   "NextToken": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of evaluation forms that matched your search query.

Type: Long

EvaluationFormSearchSummaryList

Information about the returned evaluation forms.

Type: Array of EvaluationFormSearchSummary objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example request to retrieve all evaluation forms in an instance

This example illustrates one usage of SearchEvaluationForms.

```
{
"InstanceId": "12345678-1234-5678-aabb-123456abcdef"
}
```

Example request to retrieve an evaluation form with a specific ID in an instance

This example illustrates one usage of SearchEvaluationForms.

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
  "SearchCriteria": {
    "StringCondition": {
      "ComparisonType": "EXACT",
      "FieldName": "EvaluationFormId",
      "Value": "87654321-4321-8765-bbaa-abcdef123456"
    }
  }
}
```

Example request to retrieve evaluation forms by using multiple search criteria in an instance

This example illustrates one usage of SearchEvaluationForms.

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
  "SearchCriteria": {
    "OrConditions": [
      {
        "AndConditions": [
          {
            "DateTimeCondition": {
              "ComparisonType": "GREATER_THAN",
              "FieldName": "LastModifiedTime",
              "MinValue": "2020-01-01T00:00:00Z"
            }
          },
          {
            "NumberCondition": {
              "ComparisonType": "EQUAL",
              "FieldName": "LatestVersion",
              "MinValue": 1
            }
          },
          {
            "BooleanCondition": {
              "ComparisonType": "IS_FALSE",
              "FieldName": "AutoEvaluationEnabled"
```

```
            }
          }
        ]
      }
    ]
  }
}
```

SearchHoursOfOperationOverrides

Service: Amazon Connect Service

Searches the hours of operation overrides.

Request Syntax

```
POST /search-hours-of-operation-overrides HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "HoursOfOperationOverrideSearchCriteria"
      ],
      "DateCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      },
      "OrConditions": [
         "HoursOfOperationOverrideSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
```

```
                "TagKey": "string",
                "TagValue": "string"
            }
         ]
      ],
      "TagCondition": {
         "TagKey": "string",
         "TagValue": "string"
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return hours of operations overrides.

Type: HoursOfOperationOverrideSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: HoursOfOperationSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "HoursOfOperationOverrides": [
      {
         "Config": [
            {
               "Day": "string",
               "EndTime": {
                  "Hours": number,
                  "Minutes": number
               },
               "StartTime": {
                  "Hours": number,
                  "Minutes": number
               }
            }
         ],
```

```
         "Description": "string",
         "EffectiveFrom": "string",
         "EffectiveTill": "string",
         "HoursOfOperationArn": "string",
         "HoursOfOperationId": "string",
         "HoursOfOperationOverrideId": "string",
         "Name": "string",
         "OverrideType": "string",
         "RecurrenceConfig": {
            "RecurrencePattern": {
               "ByMonth": [ number ],
               "ByMonthDay": [ number ],
               "ByWeekdayOccurrence": [ number ],
               "Frequency": "string",
               "Interval": number
            }
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of hours of operations which matched your search query.

Type: Long

HoursOfOperationOverrides

Information about the hours of operations overrides.

Type: Array of HoursOfOperationOverride objects

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

SearchHoursOfOperations

Service: Amazon Connect Service

Searches the hours of operation in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-hours-of-operations HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "HoursOfOperationSearchCriteria"
      ],
      "OrConditions": [
         "HoursOfOperationSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         ],
```

```
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return hours of operations.

Type: HoursOfOperationSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: HoursOfOperationSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "HoursOfOperations": [
      {
         "Config": [

               }
            }
         ],
         "Description": "string",
         "HoursOfOperationArn": "string",
```

```
         "HoursOfOperationId": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "ParentHoursOfOperations": [
            {
               "Arn": "string",
               "Id": "string",
               "Name": "string"
            }
         ],
         "Tags": {
            "string" : "string"
         },
         "TimeZone": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of hours of operations which matched your search query.

Type: Long

HoursOfOperations

Information about the hours of operations.

Type: Array of HoursOfOperation objects

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchNotifications

Service: Amazon Connect Service

Searches for notifications based on specified criteria and filters. Returns a paginated list of notifications matching the search parameters, ordered by descending creation time. Supports filtering by content and tags.

Request Syntax

```
POST /search-notifications HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "NotificationSearchCriteria"
      ],
      "OrConditions": [
         "NotificationSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
```

```
                    "TagKey": "string",
                    "TagValue": "string"
                }
            ]
        }
    ],
    "TagCondition": {
        "TagKey": "string",
        "TagValue": "string"
    }
  }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page. Valid range is 1-100.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response to retrieve the next page of results.

Type: String

Required: No

SearchCriteria

The search criteria to apply when searching for notifications. Supports filtering by notification ID and message content using comparison types such as STARTS_WITH, CONTAINS, and EXACT.

Type: NotificationSearchCriteria object

Required: No

SearchFilter

Filters to apply to the search results, such as tag-based filters.

Type: NotificationSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Notifications": [
      {
         "Arn": "string",
         "Content": {
            "string" : "string"
         },
         "CreatedAt": number,
         "ExpiresAt": number,
         "Id": "string",
         "InstanceId": "string",
```

```
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Priority": "string",
            "Recipients": [ "string" ],
            "Tags": {
               "string" : "string"
            }
         }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate total number of notifications matching the search criteria.

Type: Long

NextToken

The token for the next set of results. If present, there are more results available.

Type: String

Notifications

A list of notifications matching the search criteria.

Type: Array of NotificationSearchSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchPredefinedAttributes

Service: Amazon Connect Service

Searches predefined attributes that meet certain criteria. A *predefined attribute* is made up of a name and a value. You can use predefined attributes for:

- Routing proficiency (for example, agent certification) that has predefined values (for example, a list of possible certifications). For more information, see Create predefined attributes for routing contacts to agents.
- Contact information that varies between transfers or conferences, such as the name of the business unit handling the contact. For more information, see Use contact segment attributes.

For the predefined attributes per instance quota, see Amazon Connect quotas.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /search-predefined-attributes HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "PredefinedAttributeSearchCriteria"
      ],
      "OrConditions": [
         "PredefinedAttributeSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return predefined attributes.

Type: PredefinedAttributeSearchCriteria object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "PredefinedAttributes": [
      {
         "AttributeConfiguration": {
            "EnableValueValidationOnAssociation": boolean,
            "IsReadOnly": boolean
         },
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Purposes": [ "string" ],
         "Values": { ... }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate number of predefined attributes which matched your search query.

Type: Long

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

PredefinedAttributes

Predefined attributes matched by the search criteria.

Type: Array of PredefinedAttribute objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example shows a request and response.

```
POST https://connect.us-west-2.amazonaws.com/search-predefined-attributes HTTP/1.1
Content-type: application/json
{
    "InstanceId": "InstanceId",
    "MaxResults": 5,
    "SearchCriteria": {
        "StringCondition": {
            "ComparisonType": "EXACT",
            "FieldName": "purposes",
            "Value": "proficiency"
        }
    }
}

Response:
{
    "ApproximateTotalCount": 20,
    "NextToken": "nextToken,
    "PredefinedAttributes": [
        {
            "AttributeConfiguration": {
                "EnableValueValidationOnAssociation": false,
                "IsReadOnly": false
            },
            "LastModifiedRegion": null,
            "LastModifiedTime": null,
```

```
            "Name": "Name1",
            "Purposes": [
                "proficiency"
            ],
            "Values": {
                "StringList": [
                    "value1",
                    "value2"
                ]
            }
        },
        {
            "AttributeConfiguration": {
                "EnableValueValidationOnAssociation": false,
                "IsReadOnly": false
            },
            "LastModifiedRegion": null,
            "LastModifiedTime": null,
            "Name": "Name2",
            "Purposes": [
                "contact-attributes-search",
                "proficiency"
            ],
            "Values": {
                "StringList": [
                    "value1",
                    "value2"
                ]
            }
        }
    ]
}
```

SearchPrompts

Service: Amazon Connect Service

Searches prompts in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-prompts HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "PromptSearchCriteria"
      ],
      "OrConditions": [
         "PromptSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         ],
```

```
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return prompts.

Type: PromptSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: PromptSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Prompts": [
      {
         "Description": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "PromptARN": "string",
         "PromptId": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of quick connects which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Prompts

Information about the prompts.

Type: Array of Prompt objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchQueues

Service: Amazon Connect Service

Searches queues in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-queues HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "QueueSearchCriteria"
      ],
      "OrConditions": [
         "QueueSearchCriteria"
      ],
      "QueueTypeCondition": "string",
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
```

```
         ],
         "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 500.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return queues.

> **Note**
>
> The `name` and `description` fields support "contains" queries with a minimum of 2 characters and a maximum of 25 characters. Any queries with character lengths outside of this range will throw invalid results.

Type: QueueSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: QueueSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Queues": [
      {
         "Description": "string",
         "HoursOfOperationId": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "MaxContacts": number,
```

```
         "Name": "string",
         "OutboundCallerConfig": {
            "OutboundCallerIdName": "string",
            "OutboundCallerIdNumberId": "string",
            "OutboundFlowId": "string"
         },
         "OutboundEmailConfig": {
            "OutboundEmailAddressId": "string"
         },
         "QueueArn": "string",
         "QueueId": "string",
         "Status": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of queues which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Queues

Information about the queues.

Type: Array of Queue objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchQuickConnects

Service: Amazon Connect Service

Searches quick connects in an Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-quick-connects HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [

         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return quick connects.

Type: QuickConnectSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: QuickConnectSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "QuickConnects": [
      {
         "Description": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "QuickConnectARN": "string",
         "QuickConnectConfig": {
            "FlowConfig": {
               "ContactFlowId": "string"
            },
            "PhoneConfig": {
               "PhoneNumber": "string"
            },
            "QueueConfig": {
               "ContactFlowId": "string",
               "QueueId": "string"
            },
```

```
            "QuickConnectType": "string",
            "UserConfig": {
               "ContactFlowId": "string",
               "UserId": "string"
            }
         },
         "QuickConnectId": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of quick connects which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

QuickConnects

Information about the quick connects.

Type: Array of QuickConnect objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchResourceTags

Service: Amazon Connect Service

Searches tags used in an Amazon Connect instance using optional search criteria.

Request Syntax

```
POST /search-resource-tags HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "ResourceTypes": [ "string" ],
   "SearchCriteria": {
      "TagSearchCondition": {
         "tagKey": "string",
         "tagKeyComparisonType": "string",
         "tagValue": "string",
         "tagValueComparisonType": "string"
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

ResourceTypes

The list of resource types to be used to search tags from. If not provided or if any empty list is provided, this API will search from all supported resource types. Note that lowercase and - are required.

Supported resource types

- agent
- agent-state
- routing-profile
- standard-queue
- security-profile
- operating-hours
- prompt
- contact-flow

- flow- module
- transfer-destination (also known as quick connect)

Type: Array of strings

Required: No

SearchCriteria

The search criteria to be used to return tags.

Type: ResourceTagsSearchCriteria object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "Tags": [
      {
         "key": "string",
         "value": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Tags

A list of tags used in the Amazon Connect instance.

Type: Array of TagSet objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

MaximumResultReturnedException

Maximum number (1000) of tags have been returned with current request. Consider changing request parameters to get more tags.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchRoutingProfiles

Service: Amazon Connect Service

Searches routing profiles in an Amazon Connect instance, with optional filtering.

> **Note**
>
> `SearchRoutingProfiles` does not populate LastModifiedRegion, LastModifiedTime, MediaConcurrencies.CrossChannelBehavior, and AgentAvailabilityTimer in its response, but DescribeRoutingProfile does.

Request Syntax

```
POST /search-routing-profiles HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "RoutingProfileSearchCriteria"
      ],
      "OrConditions": [
         "RoutingProfileSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
```

```
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         ],
         "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 500.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return routing profiles.

> **Note**
>
> The `name` and `description` fields support "contains" queries with a minimum of 2 characters and a maximum of 25 characters. Any queries with character lengths outside of this range will throw invalid results.

Type: RoutingProfileSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: RoutingProfileSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
```

```
   "RoutingProfiles": [
      {
         "AgentAvailabilityTimer": "string",
         "AssociatedManualAssignmentQueueIds": [ "string" ],
         "AssociatedQueueIds": [ "string" ],
         "DefaultOutboundQueueId": "string",
         "Description": "string",
         "InstanceId": "string",
         "IsDefault": boolean,
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "MediaConcurrencies": [
            {
               "Channel": "string",
               "Concurrency": number,
               "CrossChannelBehavior": {
                  "BehaviorType": "string"
               }
            }
         ],
         "Name": "string",
         "NumberOfAssociatedManualAssignmentQueues": number,
         "NumberOfAssociatedQueues": number,
         "NumberOfAssociatedUsers": number,
         "RoutingProfileArn": "string",
         "RoutingProfileId": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of routing profiles which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

RoutingProfiles

Information about the routing profiles.

Type: Array of RoutingProfile objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchSecurityProfiles

Service: Amazon Connect Service

Searches security profiles in an Amazon Connect instance, with optional filtering.

For information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
POST /search-security-profiles HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "SecurityProfileSearchCriteria"
      ],
      "OrConditions": [
         "SecurityProfileSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
```

```
                "TagValue": "string"
            }
         ]
      ],
      "TagCondition": {
         "TagKey": "string",
         "TagValue": "string"
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return security profiles.

> **Note**
>
> The `name` field support "contains" queries with a minimum of 2 characters and maximum of 25 characters. Any queries with character lengths outside of this range will throw invalid results.

> **Note**
>
> The currently supported value for `FieldName`: `name`

Type: SecurityProfileSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: SecurityProfilesSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
```

```
   "NextToken": "string",
   "SecurityProfiles": [
      {
         "Arn": "string",
         "Description": "string",
         "Id": "string",
         "OrganizationResourceId": "string",
         "SecurityProfileName": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of security profiles which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

SecurityProfiles

Information about the security profiles.

Type: Array of SecurityProfileSearchSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchTestCases

Service: Amazon Connect Service

Searches for test cases in the specified Amazon Connect instance, with optional filtering.

Request Syntax

```
POST /search-test-cases HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "TestCaseSearchCriteria"
      ],
      "OrConditions": [
         "TestCaseSearchCriteria"
      ],
      "StatusCondition": "string",
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "TagFilter": {
         "AndConditions": [
            {
               "TagKey": "string",
               "TagValue": "string"
            }
         ],
         "OrConditions": [
            [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
```

```
            ],
            "TagCondition": {
               "TagKey": "string",
               "TagValue": "string"
            }
         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return test cases.

Type: TestCaseSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: TestCaseSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "TestCases": [
      {
         "Arn": "string",
         "Content": "string",
         "Description": "string",
         "EntryPoint": {
            "ChatEntryPointParameters": {
               "FlowId": "string"
            },
```

```
            "Type": "string",
            "VoiceCallEntryPointParameters": {
               "DestinationPhoneNumber": "string",
               "FlowId": "string",
               "SourcePhoneNumber": "string"
            }
         },
         "Id": "string",
         "InitializationData": "string",
         "LastModifiedRegion": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Status": "string",
         "Tags": {
            "string" : "string"
         },
         "TestCaseSha256": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of test cases which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

TestCases

Information about the test cases.

Type: Array of TestCase objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchUserHierarchyGroups

Service: Amazon Connect Service

Searches UserHierarchyGroups in an Amazon Connect instance, with optional filtering.

> **Important**
>
> The UserHierarchyGroup with `"LevelId": "0"` is the foundation for building levels on top of an instance. It is not user-definable, nor is it visible in the UI.

Request Syntax

```
POST /search-user-hierarchy-groups HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "UserHierarchyGroupSearchCriteria"
      ],
      "OrConditions": [
         "UserHierarchyGroupSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
```

```
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
                  }
               ]
            }
         ],
         "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return UserHierarchyGroups.

Type: UserHierarchyGroupSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: UserHierarchyGroupSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "UserHierarchyGroups": [
      {
         "Arn": "string",
         "HierarchyPath": {
            "LevelFive": {
               "Arn": "string",
               "Id": "string",
               "LastModifiedRegion": "string",
               "LastModifiedTime": number,
```

```
            "Name": "string"
         },
         "LevelFour": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelOne": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelThree": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         },
         "LevelTwo": {
            "Arn": "string",
            "Id": "string",
            "LastModifiedRegion": "string",
            "LastModifiedTime": number,
            "Name": "string"
         }
      },
      "Id": "string",
      "LastModifiedRegion": "string",
      "LastModifiedTime": number,
      "LevelId": "string",
      "Name": "string",
      "Tags": {
         "string" : "string"
      }
   }
]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of userHierarchyGroups which matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

UserHierarchyGroups

Information about the userHierarchyGroups.

Type: Array of HierarchyGroup objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchUsers

Service: Amazon Connect Service

Searches users in an Amazon Connect instance, with optional filtering.

> **Note**
>
> `AfterContactWorkTimeLimit` is returned in milliseconds.

Request Syntax

```
POST /search-users HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "UserSearchCriteria"
      ],
      "HierarchyGroupCondition": {
         "HierarchyGroupMatchType": "string",
         "Value": "string"
      },
      "ListCondition": {
         "Conditions": [
            {
               "NumberCondition": {
                  "ComparisonType": "string",
                  "FieldName": "string",
                  "MaxValue": number,
                  "MinValue": number
               },
               "StringCondition": {
                  "ComparisonType": "string",
                  "FieldName": "string",
                  "Value": "string"
               }
            }
```

```
            ],

            "TagValue": "string"
         }
      }
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 500.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria to be used to return users.

> **Note**
>
> The `name` and `description` fields support "contains" queries with a minimum of 2 characters and a maximum of 25 characters. Any queries with character lengths outside of this range will throw invalid results.

Type: UserSearchCriteria object

Required: No

SearchFilter

Filters to be applied to search results.

Type: UserSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Users": [
      {
         "AfterContactWorkConfigs": [
            {
               "AfterContactWorkConfig": {
                  "AfterContactWorkTimeLimit": number
               },
               "AgentFirstCallbackAfterContactWorkConfig": {
                  "AfterContactWorkTimeLimit": number
               },
               "Channel": "string"
            }
         ],
         "Arn": "string",
         "AutoAcceptConfigs": [
            {
               "AgentFirstCallbackAutoAccept": boolean,
               "AutoAccept": boolean,
               "Channel": "string"
            }
         ],
         "DirectoryUserId": "string",
         "HierarchyGroupId": "string",
         "Id": "string",
         "IdentityInfo": {
            "FirstName": "string",
            "LastName": "string"
         },
         "PersistentConnectionConfigs": [
            {
               "Channel": "string",
               "PersistentConnection": boolean
            }
```

```
         ],
         "PhoneConfig": {
            "AfterContactWorkTimeLimit": number,
            "AutoAccept": boolean,

            "PhoneType": "string"
         },
         "PhoneNumberConfigs": [
            {
               "Channel": "string",
               "PhoneNumber": "string",
               "PhoneType": "string"
            }
         ],
         "RoutingProfileId": "string",
         "SecurityProfileIds": [ "string" ],
         "Tags": {
            "string" : "string"
         },
         "Username": "string",
         "VoiceEnhancementConfigs": [
            {
               "Channel": "string",
               "VoiceEnhancementMode": "string"
            }
         ]
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The total number of users who matched your search query.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Users

Information about the users.

Type: Array of UserSearchSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchViews

Service: Amazon Connect Service

Searches views based on name, description, or tags.

Request Syntax

```
POST /search-views HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "ViewSearchCriteria"
      ],
      "OrConditions": [
         "ViewSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      },
      "ViewStatusCondition": "string",
      "ViewTypeCondition": "string"
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
```

```
                    "TagKey": "string",
                    "TagValue": "string"
                }
            ]
        }
    ],
    "TagCondition": {
        "TagKey": "string",
        "TagValue": "string"
    }
  }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria, including field names and comparison types.

Type: ViewSearchCriteria object

Required: No

SearchFilter

Filters to apply to the search, such as tag-based filters.

Type: ViewSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Views": [
      {
         "Arn": "string",
         "Content": {
            "Actions": [ "string" ],
            "InputSchema": "string",
```

```
            "Template": "string"
         },
         "CreatedTime": number,
         "Description": "string",
         "Id": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "Status": "string",
         "Tags": {
            "string" : "string"
         },
         "Type": "string",
         "Version": number,
         "VersionDescription": "string",
         "ViewContentSha256": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate total number of views that match the search criteria.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Views

A list of views that match the search criteria.

Type: Array of View objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchVocabularies

Service: Amazon Connect Service

Searches for vocabularies within a specific Amazon Connect instance using `State`, `NameStartsWith`, and `LanguageCode`.

Request Syntax

```
POST /vocabulary-summary/InstanceId HTTP/1.1
Content-type: application/json

{
   "LanguageCode": "string",
   "MaxResults": number,
   "NameStartsWith": "string",
   "NextToken": "string",
   "State": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

LanguageCode

The language code of the vocabulary entries. For a list of languages and their corresponding language codes, see What is Amazon Transcribe?

Type: String

Valid Values: `ar-AE | de-CH | de-DE | en-AB | en-AU | en-GB | en-IE | en-IN | en-US | en-WL | es-ES | es-US | fr-CA | fr-FR | hi-IN | it-IT | ja-JP | ko-KR | pt-BR | pt-PT | zh-CN | en-NZ | en-ZA | ca-ES | da-DK | fi-FI | id-ID | ms-MY | nl-NL | no-NO | pl-PL | sv-SE | tl-PH`

Required: No

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NameStartsWith

The starting pattern of the name of the vocabulary.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 140.

Pattern: `^[0-9a-zA-Z._-]+`

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

Required: No

State

The current state of the custom vocabulary.

Type: String

Valid Values: `CREATION_IN_PROGRESS | ACTIVE | CREATION_FAILED | DELETE_IN_PROGRESS`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "VocabularySummaryList": [
      {
         "Arn": "string",
         "FailureReason": "string",
         "Id": "string",
         "LanguageCode": "string",
         "LastModifiedTime": number,
         "Name": "string",
         "State": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

VocabularySummaryList

The list of the available custom vocabularies.

Type: Array of VocabularySummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchWorkspaceAssociations

Service: Amazon Connect Service

Searches for workspace associations with users or routing profiles based on various criteria.

Request Syntax

```
POST /search-workspace-associations HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "WorkspaceAssociationSearchCriteria"
      ],
      "OrConditions": [
         "WorkspaceAssociationSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
```

```
                    }
                ]
            }
        ],
        "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
        }
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 500.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria, including workspace ID, resource ID, or resource type.

Type: WorkspaceAssociationSearchCriteria object

Required: No

SearchFilter

Filters to apply to the search, such as tag-based filters.

Type: WorkspaceAssociationSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "WorkspaceAssociations": [
      {
         "ResourceArn": "string",
         "ResourceId": "string",
         "ResourceName": "string",
         "ResourceType": "string",
         "WorkspaceArn": "string",
         "WorkspaceId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate total number of workspace associations that match the search criteria.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

WorkspaceAssociations

A list of workspace associations that match the search criteria.

Type: Array of WorkspaceAssociationSearchSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SearchWorkspaces

Service: Amazon Connect Service

Searches workspaces based on name, description, visibility, or tags.

Request Syntax

```
POST /search-workspaces HTTP/1.1
Content-type: application/json

{
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "SearchCriteria": {
      "AndConditions": [
         "WorkspaceSearchCriteria"
      ],
      "OrConditions": [
         "WorkspaceSearchCriteria"
      ],
      "StringCondition": {
         "ComparisonType": "string",
         "FieldName": "string",
         "Value": "string"
      }
   },
   "SearchFilter": {
      "AttributeFilter": {
         "AndCondition": {
            "TagConditions": [
               {
                  "TagKey": "string",
                  "TagValue": "string"
               }
            ]
         },
         "OrConditions": [
            {
               "TagConditions": [
                  {
                     "TagKey": "string",
                     "TagValue": "string"
```

```
                    }
                ]
            }
        ],
        "TagCondition": {
            "TagKey": "string",
            "TagValue": "string"
        }
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 500.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2500.

Required: No

SearchCriteria

The search criteria, including field names and comparison types.

Type: WorkspaceSearchCriteria object

Required: No

SearchFilter

Filters to apply to the search, such as tag-based filters.

Type: WorkspaceSearchFilter object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApproximateTotalCount": number,
   "NextToken": "string",
   "Workspaces": [
      {
         "Arn": "string",
         "CreatedAt": number,
         "Description": "string",
         "Id": "string",
         "Name": "string",
         "Tags": {
            "string" : "string"
         },
         "Title": "string",
         "Visibility": "string"
      }
   ]
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApproximateTotalCount

The approximate total number of workspaces that match the search criteria.

Type: Long

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Workspaces

A list of workspaces that match the search criteria.

Type: Array of WorkspaceSearchSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SendChatIntegrationEvent

Service: Amazon Connect Service

Processes chat integration events from AWS or external integrations to Amazon Connect. A chat integration event includes:

- SourceId, DestinationId, and Subtype: a set of identifiers, uniquely representing a chat
- ChatEvent: details of the chat action to perform such as sending a message, event, or disconnecting from a chat

When a chat integration event is sent with chat identifiers that do not map to an active chat contact, a new chat contact is also created before handling chat action.

Access to this API is currently restricted to AWS End User Messaging for supporting SMS integration.

Request Syntax

```
POST /chat-integration-event HTTP/1.1
Content-type: application/json

{
   "DestinationId": "string",
   "Event": {
      "Content": "string",
      "ContentType": "string",
      "Type": "string"
   },
   "NewSessionDetails": {
      "Attributes": {
         "string" : "string"
      },
      "ParticipantDetails": {
         "DisplayName": "string"
      },
      "StreamingConfiguration": {
         "StreamingEndpointArn": "string"
      },
      "SupportedMessagingContentTypes": [ "string" ]
   },
   "SourceId": "string",
```

```
    "Subtype": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

DestinationId

Chat system identifier, used in part to uniquely identify chat. This is associated with the Amazon Connect instance and flow to be used to start chats. For AWS SMS, this is the phone number destination of inbound AWS SMS messages represented by an AWS End User Messaging phone number ARN.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

Event

Chat integration event payload

Type: ChatEvent object

Required: Yes

NewSessionDetails

Contact properties to apply when starting a new chat. If the integration event is handled with an existing chat, this is ignored.

Type: NewSessionDetails object

Required: No

SourceId

External identifier of chat customer participant, used in part to uniquely identify a chat. For SMS, this is the E164 phone number of the chat customer participant.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

Subtype

Classification of a channel. This is used in part to uniquely identify chat.

Valid value: `["connect:sms", connect:"WhatsApp"]`

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "InitialContactId": "string",
   "NewChatCreated": boolean
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

InitialContactId

Identifier of chat contact used to handle integration event. This may be null if the integration event is not valid without an already existing chat contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

NewChatCreated

Whether handling the integration event resulted in creating a new chat or acting on existing chat.

Type: Boolean

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SendOutboundEmail

Service: Amazon Connect Service

Send outbound email for outbound campaigns. For more information about outbound campaigns, see Set up Amazon Connect outbound campaigns.

> **Note**
>
> Only the Amazon Connect outbound campaigns service principal is allowed to assume a role in your account and call this API.

Request Syntax

```
PUT /instance/InstanceId/outbound-email HTTP/1.1
Content-type: application/json

{
   "AdditionalRecipients": {
      "CcEmailAddresses": [
         {
            "DisplayName": "string",
            "EmailAddress": "string"
         }
      ]
   },
   "ClientToken": "string",
   "DestinationEmailAddress": {
      "DisplayName": "string",
      "EmailAddress": "string"
   },
   "EmailMessage": {
      "MessageSourceType": "string",
      "RawMessage": {
         "Body": "string",
         "ContentType": "string",
         "Subject": "string"
      },
      "TemplatedMessageConfig": {
         "KnowledgeBaseId": "string",
         "MessageTemplateId": "string",
         "TemplateAttributes": {
```

```
            "CustomAttributes": {
               "string" : "string"
            },
            "CustomerProfileAttributes": "string"
         }
      }
   },
   "FromEmailAddress": {
      "DisplayName": "string",
      "EmailAddress": "string"
   },
   "SourceCampaign": {
      "CampaignId": "string",
      "OutboundRequestId": "string"
   },
   "TrafficType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AdditionalRecipients

The additional recipients address of the email in CC.

Type: OutboundAdditionalRecipients object

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

DestinationEmailAddress

The email address to send the email to.

Type: EmailAddressInfo object

Required: Yes

EmailMessage

The email message body to be sent to the newly created email.

Type: OutboundEmailContent object

Required: Yes

FromEmailAddress

The email address to be used for sending email.

Type: EmailAddressInfo object

Required: Yes

SourceCampaign

A Campaign object need for Campaign traffic type.

Type: SourceCampaign object

Required: No

TrafficType

Denotes the class of traffic.

> **Note**
>
> Only the CAMPAIGN traffic type is supported.

Type: String

Valid Values: `GENERAL | CAMPAIGN`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartAttachedFileUpload

Service: Amazon Connect Service

Provides a pre-signed Amazon S3 URL in response for uploading your content.

> **Important**
>
> You may only use this API to upload attachments to an Amazon Connect Case or Amazon Connect Email.

Request Syntax

```
PUT /attached-files/InstanceId?associatedResourceArn=AssociatedResourceArn HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "CreatedBy": { ... },
   "FileName": "string",
   "FileSizeInBytes": number,
   "FileUseCaseType": "string",
   "Tags": {
      "string" : "string"
   },
   "UrlExpiryInSeconds": number
}
```

URI Request Parameters

The request uses the following URI parameters.

AssociatedResourceArn

The resource to which the attached file is (being) uploaded to. The supported resources are Cases and Email.

> **Note**
>
> This value must be a valid ARN.

Required: Yes

InstanceId

The unique identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

CreatedBy

Represents the identity that created the file.

Type: CreatedByInfo object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

FileName

A case-sensitive name of the attached file being uploaded.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `^\P{C}*$`

Required: Yes

FileSizeInBytes

The size of the attached file in bytes.

Type: Long

Valid Range: Minimum value of 1.

Required: Yes

FileUseCaseType

The use case for the file.

> **Important**
>
> Only `ATTACHMENTS` are supported.

Type: String

Valid Values: `EMAIL_MESSAGE | ATTACHMENT`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, `{ "Tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

UrlExpiryInSeconds

Optional override for the expiry of the pre-signed S3 URL in seconds. The default value is 300.

Type: Integer

Valid Range: Minimum value of 5. Maximum value of 300.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "CreatedBy": { ... },
   "CreationTime": "string",
   "FileArn": "string",
   "FileId": "string",
   "FileStatus": "string",
   "UploadUrlMetadata": {
      "HeadersToInclude": {
         "string" : "string"
      },
      "Url": "string",
      "UrlExpiry": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

CreatedBy

Represents the identity that created the file.

Type: CreatedByInfo object

Note: This object is a Union. Only one member of this object can be specified or returned.

CreationTime

The time of Creation of the file resource as an ISO timestamp. It's specified in ISO 8601 format: `yyyy-MM-ddThh:mm:ss.SSSZ`. For example, `2024-05-03T02:41:28.172Z`.

Type: String

FileArn

The unique identifier of the attached file resource (ARN).

Type: String

FileId

The unique identifier of the attached file resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

FileStatus

The current status of the attached file.

Type: String

Valid Values: `APPROVED | REJECTED | PROCESSING | FAILED`

UploadUrlMetadata

The headers to be provided while uploading the file to the URL.

Type: UploadUrlMetadata object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartChatContact

Service: Amazon Connect Service

Initiates a flow to start a new chat for the customer. Response of this API provides a token required to obtain credentials from the CreateParticipantConnection API in the Amazon Connect Participant Service.

When a new chat contact is successfully created, clients must subscribe to the participant's connection for the created chat within 5 minutes. This is achieved by invoking CreateParticipantConnection with WEBSOCKET and CONNECTION_CREDENTIALS.

A 429 error occurs in the following situations:

- API rate limit is exceeded. API TPS throttling returns a `TooManyRequests` exception.
- The quota for concurrent active chats is exceeded. Active chat throttling returns a `LimitExceededException`.

If you use the `ChatDurationInMinutes` parameter and receive a 400 error, your account may not support the ability to configure custom chat durations. For more information, contact Support.

For more information about chat, see the following topics in the *Amazon Connect Administrator Guide*:

- Concepts: Web and mobile messaging capabilities in Amazon Connect
- Amazon Connect Chat security best practices

Request Syntax

```
PUT /contact/chat HTTP/1.1
Content-type: application/json

{
   "Attributes": {
      "string" : "string"
   },
   "ChatDurationInMinutes": number,
   "ClientToken": "string",
   "ContactFlowId": "string",
   "CustomerId": "string",
```

```
    "DisconnectOnCustomerExit": [ "string" ],
    "InitialMessage": {
       "Content": "string",
       "ContentType": "string"
    },
    "InstanceId": "string",
    "ParticipantConfiguration": {
       "ResponseMode": "string"
    },
    "ParticipantDetails": {
       "DisplayName": "string"
    },
    "PersistentChat": {
       "RehydrationType": "string",
       "SourceContactId": "string"
    },
    "RelatedContactId": "string",
    "SegmentAttributes": {
       "string" : {
          "ValueArn": "string",
          "ValueInteger": number,
          "ValueList": [
             "SegmentAttributeValue"
          ],
          "ValueMap": {
             "string" : "SegmentAttributeValue"
          },
          "ValueString": "string"
       }
    },
    "SupportedMessagingContentTypes": [ "string" ]
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ChatDurationInMinutes

The total duration of the newly started chat session. If not specified, the chat session duration defaults to 25 hour. The minimum configurable time is 60 minutes. The maximum configurable time is 10,080 minutes (7 days).

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 10080.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for initiating the chat. To see the ContactFlowId in the Amazon Connect admin website, on the navigation menu go to **Routing**, **Flows**. Choose the flow. On

the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**846ec553-a005-41c0-8341-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

CustomerId

The customer's identification number. For example, the `CustomerId` may be a customer number from your CRM.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

DisconnectOnCustomerExit

A list of participant types to automatically disconnect when the end customer ends the chat session, allowing them to continue through disconnect flows such as surveys or feedback forms.

Type: Array of strings

Array Members: Fixed number of 1 item.

Valid Values: `AGENT`

Required: No

InitialMessage

The initial message to be sent to the newly created chat.

Type: ChatMessage object

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ParticipantConfiguration

The configuration of the participant.

Type: ParticipantConfiguration object

Required: No

ParticipantDetails

Information identifying the participant.

Type: ParticipantDetails object

Required: Yes

PersistentChat

Enable persistent chats. For more information about enabling persistent chat, and for example use cases and how to configure for them, see Enable persistent chat.

Type: PersistentChat object

Required: No

RelatedContactId

The unique identifier for an Amazon Connect contact. This identifier is related to the chat starting.

> **Note**
>
> You cannot provide data for both RelatedContactId and PersistentChat.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

Attribute keys can include only alphanumeric, -, and _.

This field can be used to show channel subtype, such as `connect:Guide`.

> **Note**
>
> The types `application/vnd.amazonaws.connect.message.interactive` and `application/vnd.amazonaws.connect.message.interactive.response` must be present in the SupportedMessagingContentTypes field of this API in order to set `SegmentAttributes` as `{ "connect:Subtype": {"valueString" : "connect:Guide" }}`.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

SupportedMessagingContentTypes

The supported chat message content types. Supported types are `text/plain`, `text/markdown`, `application/json`, `application/vnd.amazonaws.connect.message.interactive`, and `application/vnd.amazonaws.connect.message.interactive.response`.

Content types must always contain `text/plain`. You can then put any other supported type in the list. For example, all the following lists are valid because they contain `text/plain`: `[text/plain, text/markdown, application/json]`, `[text/`

markdown, text/plain], [text/plain, application/json, application/vnd.amazonaws.connect.message.interactive.response].

> **Note**
>
> The type application/vnd.amazonaws.connect.message.interactive is required to use the Show view flow block.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string",
   "ContinuedFromContactId": "string",
   "ParticipantId": "string",
   "ParticipantToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ContinuedFromContactId

The contactId from which a persistent chat session is started. This field is populated only for persistent chats.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantId

The identifier for a chat participant. The participantId for a chat participant is the same throughout the chat lifecycle.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantToken

The token used by the chat participant to call CreateParticipantConnection. The participant token is valid for the lifetime of a chat participant.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StartContactEvaluation

Service: Amazon Connect Service

Starts an empty evaluation in the specified Amazon Connect instance, using the given evaluation form for the particular contact. The evaluation form version used for the contact evaluation corresponds to the currently activated version. If no version is activated for the evaluation form, the contact evaluation cannot be started.

> **Note**
>
> Evaluations created through the public API do not contain answer values suggested from automation.

Request Syntax

```
PUT /contact-evaluations/InstanceId HTTP/1.1
Content-type: application/json

{
   "AutoEvaluationConfiguration": {
      "Enabled": boolean
   },
   "ClientToken": "string",
   "ContactId": "string",
   "EvaluationFormId": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AutoEvaluationConfiguration

Whether automated evaluations are enabled.

Type: AutoEvaluationConfiguration object

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

EvaluationFormId

The unique identifier for the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationArn": "string",
   "EvaluationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationArn

The Amazon Resource Name (ARN) for the contact evaluation resource.

Type: String

EvaluationId

A unique identifier for the contact evaluation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example starts a contact evaluation for a contact.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "ContactId": "[contact_id]"
}
```

Sample Response

```
{
   "EvaluationId": "[evaluation_id]",
   "EvaluationArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/contact-evaluation/[evaluation_id]"
}
```

StartContactMediaProcessing

Service: Amazon Connect Service

Enables in-flight message processing for an ongoing chat session. Message processing will stay active for the rest of the chat, even if an individual contact segment ends.

Request Syntax

```
POST /contact/start-contact-media-processing HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "FailureMode": "string",
   "InstanceId": "string",
   "ProcessorArn": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

FailureMode

The desired behavior for failed message processing.

Type: String

Valid Values: `DELIVER_UNPROCESSED_MESSAGE | DO_NOT_DELIVER_UNPROCESSED_MESSAGE`

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

ProcessorArn

The Amazon Resource Name (ARN) of the Lambda processor. You can find the Amazon Resource Name of the lambda in the lambda console.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

See Also

StartContactRecording

Service: Amazon Connect Service

Starts recording the contact:

- If the API is called *before* the agent joins the call, recording starts when the agent joins the call.
- If the API is called *after* the agent joins the call, recording starts at the time of the API call.

StartContactRecording is a one-time action. For example, if you use StopContactRecording to stop recording an ongoing call, you can't use StartContactRecording to restart it. For scenarios where the recording has started and you want to suspend and resume it, such as when collecting sensitive information (for example, a credit card number), use SuspendContactRecording and ResumeContactRecording.

You can use this API to override the recording behavior configured in the Set recording behavior block.

Only voice recordings are supported at this time.

Request Syntax

```
POST /contact/start-recording HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InitialContactId": "string",
   "InstanceId": "string",
   "VoiceRecordingConfiguration": {
      "IvrRecordingTrack": "string",
      "VoiceRecordingTrack": "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InitialContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

VoiceRecordingConfiguration

The person being recorded.

Type: VoiceRecordingConfiguration object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StartContactStreaming

Service: Amazon Connect Service

Initiates real-time message streaming for a new chat contact.

For more information about message streaming, see Enable real-time chat message streaming in the *Amazon Connect Administrator Guide*.

For more information about chat, see the following topics in the *Amazon Connect Administrator Guide*:

- Concepts: Web and mobile messaging capabilities in Amazon Connect
- Amazon Connect Chat security best practices

Request Syntax

```
POST /contact/start-streaming HTTP/1.1
Content-type: application/json

{
   "ChatStreamingConfiguration": {
      "StreamingEndpointArn": "string"
   },
   "ClientToken": "string",
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ChatStreamingConfiguration

The streaming configuration, such as the Amazon SNS streaming endpoint.

Type: ChatStreamingConfiguration object

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

ContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "StreamingId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

StreamingId

The identifier of the streaming configuration enabled.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StartEmailContact

Service: Amazon Connect Service

Creates an inbound email contact and initiates a flow to start the email contact for the customer. Response of this API provides the ContactId of the email contact created.

Request Syntax

```
PUT /contact/email HTTP/1.1
Content-type: application/json

{
   "AdditionalRecipients": {
      "CcAddresses": [
         {
            "DisplayName": "string",
            "EmailAddress": "string"
         }
      ],
      "ToAddresses": [
         {
            "DisplayName": "string",
            "EmailAddress": "string"
         }
      ]
   },
   "Attachments": [
      {
         "FileName": "string",
         "S3Url": "string"
      }
   ],
   "Attributes": {
      "string" : "string"
   },
   "ClientToken": "string",
   "ContactFlowId": "string",
   "Description": "string",
   "DestinationEmailAddress": "string",
   "EmailMessage": {
      "MessageSourceType": "string",
      "RawMessage": {
         "Body": "string",
```

```
            "ContentType": "string",
            "Headers": {
               "string" : "string"
            },
            "Subject": "string"
         }
      },
      "FromEmailAddress": {
         "DisplayName": "string",
         "EmailAddress": "string"
      },
      "InstanceId": "string",
      "Name": "string",
      "References": {
         "string" : {
            "Arn": "string",
            "Status": "string",
            "StatusReason": "string",
            "Type": "string",
            "Value": "string"
         }
      },
      "RelatedContactId": "string",
      "SegmentAttributes": {
         "string" : {
            "ValueArn": "string",
            "ValueInteger": number,
            "ValueList": [
               "SegmentAttributeValue"
            ],
            "ValueMap": {
               "string" : "SegmentAttributeValue"
            },
            "ValueString": "string"
         }
      }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

AdditionalRecipients

The additional recipients address of the email.

Type: InboundAdditionalRecipients object

Required: No

Attachments

List of S3 presigned URLs of email attachments and their file name.

Type: Array of EmailAttachment objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: No

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for initiating the emails. To see the ContactFlowId in the Amazon Connect admin website, on the navigation menu go to **Routing**, **Flows**. Choose the flow. On the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**846ec553-a005-41c0-8341-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

A description of the email contact.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

DestinationEmailAddress

The email address associated with the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `[^\s@]+@[^\s@]+\.[^\s@]+`

Required: Yes

EmailMessage

The email message body to be sent to the newly created email.

Type: InboundEmailContent object

Required: Yes

FromEmailAddress

The email address of the customer.

Type: EmailAddressInfo object

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of a email that is shown to an agent in the Contact Control Panel (CCP).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

References

A formatted URL that is shown to an agent in the Contact Control Panel (CCP). Emails can have the following reference types at the time of creation: `URL` | `NUMBER` | `STRING` | `DATE`. `EMAIL` | `EMAIL_MESSAGE` |`ATTACHMENT` are not a supported reference type during email creation.

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

RelatedContactId

The contactId that is related to this contact. Linking emails together by using `RelatedContactID` copies over contact attributes from the related email contact to the new

email contact. All updates to user-defined attributes in the new email contact are limited to the individual contact ID. There are no limits to the number of contacts that can be linked by using `RelatedContactId`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

Attribute keys can include only alphanumeric, -, and _.

This field can be used to show channel subtype, such as `connect:Guide`.

> **Note**
>
> To set contact expiry, a `ValueMap` must be specified containing the integer number of minutes the contact will be active for before expiring, with `SegmentAttributes` like `{ "connect:ContactExpiry": {"ValueMap" : { "ExpiryDuration": { "ValueInteger":135}}}}`.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartOutboundChatContact

Service: Amazon Connect Service

Initiates a new outbound SMS or WhatsApp contact to a customer. Response of this API provides the `ContactId` of the outbound SMS or WhatsApp contact created.

SourceEndpoint only supports Endpoints with `CONNECT_PHONENUMBER_ARN` as Type and **DestinationEndpoint** only supports Endpoints with `TELEPHONE_NUMBER` as Type. **ContactFlowId** initiates the flow to manage the new contact created.

This API can be used to initiate outbound SMS or WhatsApp contacts for an agent, or it can also deflect an ongoing contact to an outbound SMS or WhatsApp contact by using the StartOutboundChatContact Flow Action.

For more information about using SMS or WhatsApp in Amazon Connect, see the following topics in the *Amazon Connect Administrator Guide*:

- Set up SMS messaging
- Request an SMS-enabled phone number through AWS End User Messaging SMS
- Set up WhatsApp Business messaging

Request Syntax

```
PUT /contact/outbound-chat HTTP/1.1
Content-type: application/json

{
   "Attributes": {
      "string" : "string"
   },
   "ChatDurationInMinutes": number,
   "ClientToken": "string",
   "ContactFlowId": "string",
   "DestinationEndpoint": {
      "Address": "string",
      "Type": "string"
   },
   "InitialSystemMessage": {
      "Content": "string",
      "ContentType": "string"
```

```
    },
    "InitialTemplatedSystemMessage": {
       "KnowledgeBaseId": "string",
       "MessageTemplateId": "string",
       "TemplateAttributes": {
          "CustomAttributes": {
             "string" : "string"
          },
          "CustomerProfileAttributes": "string"
       }
    },
    "InstanceId": "string",
    "ParticipantDetails": {
       "DisplayName": "string"
    },
    "RelatedContactId": "string",
    "SegmentAttributes": {
       "string" : {
          "ValueArn": "string",
          "ValueInteger": number,
          "ValueList": [
             "SegmentAttributeValue"
          ],
          "ValueMap": {
             "string" : "SegmentAttributeValue"
          },
          "ValueString": "string"
       }
    },
    "SourceEndpoint": {
       "Address": "string",
       "Type": "string"
    },
    "SupportedMessagingContentTypes": [ "string" ]
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ChatDurationInMinutes

The total duration of the newly started chat session. If not specified, the chat session duration defaults to 25 hour. The minimum configurable time is 60 minutes. The maximum configurable time is 10,080 minutes (7 days).

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 10080.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs. The token is valid for 7 days after creation. If a contact is already started, the contact ID is returned.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for the call. To see the ContactFlowId in the Amazon Connect console user interface, on the navigation menu go to **Routing, Contact Flows**. Choose the flow. On the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

- arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**123ec456-a007-89c0-1234-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

DestinationEndpoint

Information about the endpoint.

Type: Endpoint object

Required: Yes

InitialSystemMessage

A chat message.

Type: ChatMessage object

Required: No

InitialTemplatedSystemMessage

Information about template message configuration.

Type: TemplatedMessageConfig object

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ParticipantDetails

The customer's details.

Type: ParticipantDetails object

Required: No

RelatedContactId

The unique identifier for an Amazon Connect contact. This identifier is related to the contact starting.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

- Attribute keys can include only alphanumeric, -, and _.
- This field can be used to show channel subtype, such as `connect:SMS` and `connect:WhatsApp`.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: Yes

SourceEndpoint

Information about the endpoint.

Type: Endpoint object

Required: Yes

SupportedMessagingContentTypes

The supported chat message content types. Supported types are:

- `text/plain`
- `text/markdown`

- `application/json, application/vnd.amazonaws.connect.message.interactive`
- `application/vnd.amazonaws.connect.message.interactive.response`

Content types must always contain `text/plain`. You can then put any other supported type in the list. For example, all the following lists are valid because they contain `text/plain`:

- `[text/plain, text/markdown, application/json]`
- `[text/markdown, text/plain]`
- `[text/plain, application/json, application/vnd.amazonaws.connect.message.interactive.response]`

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartOutboundEmailContact

Service: Amazon Connect Service

Initiates a flow to send an agent reply or outbound email contact (created from the CreateContact API) to a customer.

Request Syntax

```
PUT /contact/outbound-email HTTP/1.1
Content-type: application/json

{
   "AdditionalRecipients": {
      "CcEmailAddresses": [
         {
            "DisplayName": "string",
            "EmailAddress": "string"
         }
      ]
   },
   "ClientToken": "string",
   "ContactId": "string",
   "DestinationEmailAddress": {
      "DisplayName": "string",
      "EmailAddress": "string"
   },
   "EmailMessage": {
      "MessageSourceType": "string",
      "RawMessage": {
         "Body": "string",
         "ContentType": "string",
         "Subject": "string"
      },
      "TemplatedMessageConfig": {
         "KnowledgeBaseId": "string",
         "MessageTemplateId": "string",
         "TemplateAttributes": {
            "CustomAttributes": {
               "string" : "string"
            },
            "CustomerProfileAttributes": "string"
         }
      }
```

```
    },
    "FromEmailAddress": {
       "DisplayName": "string",
       "EmailAddress": "string"
    },
    "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

AdditionalRecipients

The additional recipients address of email in CC.

Type: OutboundAdditionalRecipients object

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

DestinationEmailAddress

The email address of the customer.

Type: EmailAddressInfo object

Required: Yes

EmailMessage

The email message body to be sent to the newly created email.

Type: OutboundEmailContent object

Required: Yes

FromEmailAddress

The email address associated with the Amazon Connect instance.

Type: EmailAddressInfo object

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartOutboundVoiceContact

Service: Amazon Connect Service

Places an outbound call to a contact, and then initiates the flow. It performs the actions in the flow that's specified (in `ContactFlowId`).

Agents do not initiate the outbound API, which means that they do not dial the contact. If the flow places an outbound call to a contact, and then puts the contact in queue, the call is then routed to the agent, like any other inbound case.

Dialing timeout for this operation can be configured with the “RingTimeoutInSeconds” parameter. If not specified, the default dialing timeout will be 60 seconds which means if the call is not connected within 60 seconds, it fails.

Note

UK numbers with a 447 prefix are not allowed by default. Before you can dial these UK mobile numbers, you must submit a service quota increase request. For more information, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

Note

Campaign calls are not allowed by default. Before you can make a call with `TrafficType = CAMPAIGN`, you must submit a service quota increase request to the quota Amazon Connect campaigns.

Note

For Preview dialing mode, only the Amazon Connect outbound campaigns service principal is allowed to assume a role in your account and call this API with OutboundStrategy.

Request Syntax

```
PUT /contact/outbound-voice HTTP/1.1
Content-type: application/json
```

```
{
   "AnswerMachineDetectionConfig": {
      "AwaitAnswerMachinePrompt": boolean,
      "EnableAnswerMachineDetection": boolean
   },
   "Attributes": {
      "string" : "string"
   },
   "CampaignId": "string",
   "ClientToken": "string",
   "ContactFlowId": "string",
   "Description": "string",
   "DestinationPhoneNumber": "string",
   "InstanceId": "string",
   "Name": "string",
   "OutboundStrategy": {
      "Config": {
         "AgentFirst": {
            "Preview": {
               "AllowedUserActions": [ "string" ],
               "PostAcceptTimeoutConfig": {
                  "DurationInSeconds": number
               }
            }
         }
      },
      "Type": "string"
   },
   "QueueId": "string",
   "References": {
      "string" : {
         "Arn": "string",
         "Status": "string",
         "StatusReason": "string",
         "Type": "string",
         "Value": "string"
      }
   },
   "RelatedContactId": "string",
   "RingTimeoutInSeconds": number,
   "SourcePhoneNumber": "string",
   "TrafficType": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

AnswerMachineDetectionConfig

Configuration of the answering machine detection for this outbound call.

Type: AnswerMachineDetectionConfig object

Required: No

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

CampaignId

The campaign identifier of the outbound communication.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency,

see Making retries safe with idempotent APIs. The token is valid for 7 days after creation. If a contact is already started, the contact ID is returned.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for the outbound call. To see the ContactFlowId in the Amazon Connect admin website, on the navigation menu go to **Routing**, **Contact Flows**. Choose the flow. On the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**846ec553-a005-41c0-8341-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

Description

A description of the voice contact that appears in the agent's snapshot in the CCP logs. For more information about CCP logs, see Download and review CCP logs in the *Amazon Connect Administrator Guide*.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

DestinationPhoneNumber

The phone number of the customer, in E.164 format.

Type: String

Pattern: `\\+[1-9]\\d{1,14}$`

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of a voice contact that is shown to an agent in the Contact Control Panel (CCP).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

OutboundStrategy

Information about the outbound strategy.

Type: OutboundStrategy object

Required: No

QueueId

The queue for the call. If you specify a queue, the phone displayed for caller ID is the phone number specified in the queue. If you do not specify a queue, the queue defined in the flow is used. If you do not specify a queue, you must specify a source phone number.

Type: String

Required: No

References

A formatted URL that is shown to an agent in the Contact Control Panel (CCP). Contacts can have the following reference types at the time of creation: `URL` | `NUMBER` | `STRING` | `DATE` | `EMAIL`. `ATTACHMENT` is not a supported reference type during voice contact creation.

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

RelatedContactId

The `contactId` that is related to this contact. Linking voice, task, or chat by using `RelatedContactID` copies over contact attributes from the related contact to the new contact. All updates to user-defined attributes in the new contact are limited to the individual contact ID. There are no limits to the number of contacts that can be linked by using `RelatedContactId`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

RingTimeoutInSeconds

The maximum time the outbound call will wait for the destination to answer the call, in seconds

Type: Integer

Valid Range: Minimum value of 15. Maximum value of 60.

Required: No

SourcePhoneNumber

The phone number associated with the Amazon Connect instance, in E.164 format. If you do not specify a source phone number, you must specify a queue.

Type: String

Pattern: `\\+[1-9]\\d{1,14}$`

Required: No

TrafficType

Denotes the class of traffic. Calls with different traffic types are handled differently by Amazon Connect. The default value is `GENERAL`. Use `CAMPAIGN` if `EnableAnswerMachineDetection` is set to `true`. For all other cases, use `GENERAL`.

Type: String

Valid Values: `GENERAL | CAMPAIGN`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

DestinationNotAllowedException

Outbound calls to the destination number are not allowed.

Message

The message about the outbound calls.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

OutboundContactNotPermittedException

The contact is not permitted.

Message

The message about the contact.

HTTP Status Code: 403

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StartScreenSharing

Service: Amazon Connect Service

Starts screen sharing for a contact. For more information about screen sharing, see Set up in-app, web, video calling, and screen sharing capabilities in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /contact/screen-sharing HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Ruby V3

StartTaskContact

Service: Amazon Connect Service

Initiates a flow to start a new task contact. For more information about task contacts, see Concepts: Tasks in Amazon Connect in the *Amazon Connect Administrator Guide*.

When using `PreviousContactId` and `RelatedContactId` input parameters, note the following:

- `PreviousContactId`
  - Any updates to user-defined task contact attributes on any contact linked through the same `PreviousContactId` will affect every contact in the chain.
  - There can be a maximum of 12 linked task contacts in a chain. That is, 12 task contacts can be created that share the same `PreviousContactId`.
- `RelatedContactId`
  - Copies contact attributes from the related task contact to the new contact.
  - Any update on attributes in a new task contact does not update attributes on previous contact.
  - There's no limit on the number of task contacts that can be created that use the same `RelatedContactId`.

In addition, when calling StartTaskContact include only one of these parameters: `ContactFlowID`, `QuickConnectID`, or `TaskTemplateID`. Only one parameter is required as long as the task template has a flow configured to run it. If more than one parameter is specified, or only the `TaskTemplateID` is specified but it does not have a flow configured, the request returns an error because Amazon Connect cannot identify the unique flow to run when the task is created.

A `ServiceQuotaExceededException` occurs when the number of open tasks exceeds the active tasks quota or there are already 12 tasks referencing the same `PreviousContactId`. For more information about service quotas for task contacts, see Amazon Connect service quotas in the *Amazon Connect Administrator Guide*.

Request Syntax

```
PUT /contact/task HTTP/1.1
Content-type: application/json

{
   "Attachments": [
      {
```

```
            "FileName": "string",
            "S3Url": "string"
         }
      ],
      "Attributes": {
         "string" : "string"
      },
      "ClientToken": "string",
      "ContactFlowId": "string",
      "Description": "string",
      "InstanceId": "string",
      "Name": "string",
      "PreviousContactId": "string",
      "QuickConnectId": "string",
      "References": {
         "string" : {
            "Arn": "string",
            "Status": "string",
            "StatusReason": "string",
            "Type": "string",
            "Value": "string"
         }
      },
      "RelatedContactId": "string",
      "ScheduledTime": number,
      "SegmentAttributes": {
         "string" : {
            "ValueArn": "string",
            "ValueInteger": number,
            "ValueList": [
               "SegmentAttributeValue"
            ],
            "ValueMap": {
               "string" : "SegmentAttributeValue"
            },
            "ValueString": "string"
         }
      },
      "TaskTemplateId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attachments

List of S3 presigned URLs of task attachments and their file name. You can have a maximum of 5 attachments per task.

Type: Array of TaskAttachment objects

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Required: No

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for initiating the tasks. To see the ContactFlowId in the Amazon Connect admin website, on the navigation menu go to **Routing**, **Flows**. Choose the flow. On the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**846ec553-a005-41c0-8341-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

A description of the task that is shown to an agent in the Contact Control Panel (CCP).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of a task that is shown to an agent in the Contact Control Panel (CCP).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: Yes

PreviousContactId

The identifier of the previous chat, voice, or task contact. Any updates to user-defined attributes to task contacts linked using the same `PreviousContactID` will affect every contact in the chain. There can be a maximum of 12 linked task contacts in a chain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

QuickConnectId

The identifier for the quick connect. Tasks that are created by using `QuickConnectId` will use the flow that is defined on agent or queue quick connect. For more information about quick connects, see Create quick connects.

Type: String

Required: No

References

A formatted URL that is shown to an agent in the Contact Control Panel (CCP). Tasks can have the following reference types at the time of creation: `URL` | `NUMBER` | `STRING` | `DATE` | `EMAIL`. `ATTACHMENT` is not a supported reference type during task creation.

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

RelatedContactId

The contactId that is related to this contact. Linking tasks together by using `RelatedContactID` copies over contact attributes from the related task contact to the new task contact. All updates to user-defined attributes in the new task contact are limited to the individual contact ID, unlike what happens when tasks are linked by using `PreviousContactID`. There are no limits to the number of contacts that can be linked by using `RelatedContactId`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

ScheduledTime

The timestamp, in Unix Epoch seconds format, at which to start running the inbound flow. The scheduled time cannot be in the past. It must be within up to 6 days in future.

Type: Timestamp

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments (unique contact ID) using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

Attribute keys can include only alphanumeric, -, and _.

This field can be used to set Contact Expiry as a duration in minutes and set a UserId for the User who created a task.

> **Note**
>
> To set contact expiry, a ValueMap must be specified containing the integer number of minutes the contact will be active for before expiring, with `SegmentAttributes` like `{ "connect:ContactExpiry": {"ValueMap" : { "ExpiryDuration": { "ValueInteger": 135}}}}`.
> To set the created by user, a valid AgentResourceId must be supplied, with `SegmentAttributes` like `{ "connect:CreatedByUser" { "ValueString": "arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/agent/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx"}}}`.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

TaskTemplateId

A unique identifier for the task template. For more information about task templates, see Create task templates in the *Amazon Connect Administrator Guide*.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactId

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartTestCaseExecution

Service: Amazon Connect Service

Starts executing a published test case.

Request Syntax

```
PUT /test-cases/InstanceId/TestCaseId/start-execution HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TestCaseId

The identifier of the test case to execute.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Status": "string",
   "TestCaseExecutionId": "string",
   "TestCaseId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Status

The status of a test case execution.

Type: String

Valid Values: `INITIATED | PASSED | FAILED | IN_PROGRESS | STOPPED`

TestCaseExecutionId

The identifier of the test case execution.

Type: String

Length Constraints: Maximum length of 500.

TestCaseId

The identifier of the test case resource that was executed.

Type: String

Length Constraints: Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartWebRTCContact

Service: Amazon Connect Service

Places an inbound in-app, web, or video call to a contact, and then initiates the flow. It performs the actions in the flow that are specified (in ContactFlowId) and present in the Amazon Connect instance (specified as InstanceId).

Request Syntax

```
PUT /contact/webrtc HTTP/1.1
Content-type: application/json

{
   "AllowedCapabilities": {
      "Agent": {
         "ScreenShare": "string",
         "Video": "string"
      },
      "Customer": {
         "ScreenShare": "string",
         "Video": "string"
      }
   },
   "Attributes": {
      "string" : "string"
   },
   "ClientToken": "string",
   "ContactFlowId": "string",
   "Description": "string",
   "InstanceId": "string",
   "ParticipantDetails": {
      "DisplayName": "string"
   },
   "References": {
      "string" : {
         "Arn": "string",
         "Status": "string",
         "StatusReason": "string",
         "Type": "string",
         "Value": "string"
      }
   },
   "RelatedContactId": "string"
```

```
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

AllowedCapabilities

Information about the video sharing capabilities of the participants (customer, agent).

Type: AllowedCapabilities object

Required: No

Attributes

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, -, and _ characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

The token is valid for 7 days after creation. If a contact is already started, the contact ID is returned.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow for the call. To see the ContactFlowId in the Amazon Connect admin website, on the navigation menu go to **Routing**, **Flows**. Choose the flow. On the flow page, under the name of the flow, choose **Show additional flow information**. The ContactFlowId is the last part of the ARN, shown here in bold:

arn:aws:connect:us-west-2:xxxxxxxxxxxx:instance/xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxx/contact-flow/**846ec553-a005-41c0-8341-xxxxxxxxxxxx**

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

Description

A description of the task that is shown to an agent in the Contact Control Panel (CCP).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ParticipantDetails

The customer's details.

Type: ParticipantDetails object

Required: Yes

References

A formatted URL that is shown to an agent in the Contact Control Panel (CCP). Tasks can have the following reference types at the time of creation: `URL` | `NUMBER` | `STRING` | `DATE` | `EMAIL`. `ATTACHMENT` is not a supported reference type during task creation.

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

RelatedContactId

The unique identifier for an Amazon Connect contact. This identifier is related to the contact starting.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ConnectionData": {
      "Attendee": {
         "AttendeeId": "string",
         "JoinToken": "string"
      },
      "Meeting": {
         "MediaPlacement": {
            "AudioFallbackUrl": "string",
            "AudioHostUrl": "string",
            "EventIngestionUrl": "string",
            "SignalingUrl": "string",
            "TurnControlUrl": "string"
```

```
         },
         "MediaRegion": "string",
         "MeetingFeatures": {
            "Audio": {
               "EchoReduction": "string"
            }
         },
         "MeetingId": "string"
      }
   },
   "ContactId": "string",
   "ParticipantId": "string",
   "ParticipantToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ConnectionData

Information required for the client application (mobile application or website) to connect to the call.

Type: ConnectionData object

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantId

The identifier for a contact participant. The `ParticipantId` for a contact participant is the same throughout the contact lifecycle.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantToken

The token used by the contact participant to call the CreateParticipantConnection API. The participant token is valid for the lifetime of a contact participant.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StopContact

Service: Amazon Connect Service

Ends the specified contact. Use this API to stop queued callbacks. It does not work for voice contacts that use the following initiation methods:

- DISCONNECT
- TRANSFER
- QUEUE_TRANSFER
- EXTERNAL_OUTBOUND
- MONITOR

Chat and task contacts can be terminated in any state, regardless of initiation method.

Request Syntax

```
POST /contact/stop HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "DisconnectReason": {
      "Code": "string"
   },
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The ID of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

DisconnectReason

The reason a contact can be disconnected. Only Amazon Connect outbound campaigns can provide this field. For a list and description of all the possible disconnect reasons by channel (including outbound campaign voice contacts) see DisconnectReason under ContactTraceRecord in the *Amazon Connect Administrator Guide*.

Type: DisconnectReason object

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ContactNotFoundException

The contact with the specified ID does not exist.

Message

The message.

HTTP Status Code: 410

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StopContactMediaProcessing

Service: Amazon Connect Service

Stops in-flight message processing for an ongoing chat session.

Request Syntax

```
POST /contact/stop-contact-media-processing HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StopContactRecording

Service: Amazon Connect Service

Stops recording a call when a contact is being recorded. StopContactRecording is a one-time action. If you use StopContactRecording to stop recording an ongoing call, you can't use StartContactRecording to restart it. For scenarios where the recording has started and you want to suspend it for sensitive information (for example, to collect a credit card number), and then restart it, use SuspendContactRecording and ResumeContactRecording.

Only voice recordings are supported at this time.

Request Syntax

```
POST /contact/stop-recording HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "ContactRecordingType": "string",
   "InitialContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

ContactRecordingType

The type of recording being operated on.

Type: String

Valid Values: `AGENT | IVR | SCREEN`

Required: No

InitialContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

StopContactStreaming

Service: Amazon Connect Service

Ends message streaming on a specified contact. To restart message streaming on that contact, call the StartContactStreaming API.

Request Syntax

```
POST /contact/stop-streaming HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string",
   "StreamingId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact. This is the identifier of the contact that is associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

StreamingId

The identifier of the streaming configuration enabled.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

- AWS SDK for Ruby V3

StopTestCaseExecution

Service: Amazon Connect Service

Stops a running test execution.

Request Syntax

```
POST /test-cases/InstanceId/TestCaseId/TestCaseExecutionId/stop-execution HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TestCaseExecutionId

The identifier of the test case execution to stop.

Length Constraints: Maximum length of 500.

Required: Yes

TestCaseId

The identifier of the test case.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

SubmitContactEvaluation

Service: Amazon Connect Service

Submits a contact evaluation in the specified Amazon Connect instance. Answers included in the request are merged with existing answers for the given evaluation. If no answers or notes are passed, the evaluation is submitted with the existing answers and notes. You can delete an answer or note by passing an empty object ({}) to the question identifier.

If a contact evaluation is already in submitted state, this operation will trigger a resubmission.

Request Syntax

```
POST /contact-evaluations/InstanceId/EvaluationId/submit HTTP/1.1
Content-type: application/json

{
   "Answers": {
      "string" : {
         "Value": { ... }
      }
   },
   "Notes": {
      "string" : {
         "Value": "string"
      }
   },
   "SubmittedBy": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationId

A unique identifier for the contact evaluation.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Answers

A map of question identifiers to answer value.

Type: String to EvaluationAnswerInput object map

Map Entries: Maximum number of 100 items.

Key Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

Notes

A map of question identifiers to note value.

Type: String to EvaluationNote object map

Map Entries: Maximum number of 100 items.

Key Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

SubmittedBy

The ID of the user who submitted the contact evaluation.

Type: EvaluatorUserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EvaluationArn": "string",
   "EvaluationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationArn

The Amazon Resource Name (ARN) for the contact evaluation resource.

Type: String

EvaluationId

A unique identifier for the contact evaluation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example submits a previously started contact evaluation.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationId": "[evaluation_id]"
}
```

Sample Response

```
{
   "EvaluationId": "[evaluation_id]",
   "EvaluationArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/contact-evaluation/[evaluation_id]"
}
```

SuspendContactRecording

Service: Amazon Connect Service

When a contact is being recorded, this API suspends recording whatever is selected in the flow configuration: call (IVR or agent), screen, or both. If only call recording or only screen recording is enabled, then it would be suspended. For example, you might suspend the screen recording while collecting sensitive information, such as a credit card number. Then use ResumeContactRecording to restart recording the screen.

The period of time that the recording is suspended is filled with silence in the final recording.

Voice (IVR, agent) and screen recordings are supported.

Request Syntax

```
POST /contact/suspend-recording HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "ContactRecordingType": "string",
   "InitialContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

ContactRecordingType

The type of recording being operated on.

Type: String

Valid Values: `AGENT | IVR | SCREEN`

Required: No

InitialContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TagContact

Service: Amazon Connect Service

Adds the specified tags to the contact resource. For more information about this API is used, see Set up granular billing for a detailed view of your Amazon Connect usage.

Request Syntax

```
POST /contact/tags HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Tags

The tags to be assigned to the contact resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

> **Note**
>
> Authorization is not supported by this tag.

Type: String to string map

Map Entries: Maximum number of 6 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

TagResource

Service: Amazon Connect Service

Adds the specified tags to the specified resource.

Some of the supported resource types are agents, routing profiles, queues, quick connects, flows, agent statuses, hours of operation, phone numbers, security profiles, and task templates. For a complete list, see Tagging resources in Amazon Connect.

For sample policies that use tags, see Amazon Connect Identity-Based Policy Examples in the *Amazon Connect Administrator Guide*.

Request Syntax

```
POST /tags/resourceArn HTTP/1.1
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The Amazon Resource Name (ARN) of the resource.

Required: Yes

Request Body

The request accepts the following data in JSON format.

tags

The tags used to organize, track, or control access for this resource. For example, { "Tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

TransferContact

Service: Amazon Connect Service

Transfers `TASK` or `EMAIL` contacts from one agent or queue to another agent or queue at any point after a contact is created. You can transfer a contact to another queue by providing the flow which orchestrates the contact to the destination queue. This gives you more control over contact handling and helps you adhere to the service level agreement (SLA) guaranteed to your customers.

Note the following requirements:

- Transfer is only supported for `TASK` and `EMAIL` contacts.
- Do not use both `QueueId` and `UserId` in the same call.
- The following flow types are supported: Inbound flow, Transfer to agent flow, and Transfer to queue flow.
- The `TransferContact` API can be called only on active contacts.
- A contact cannot be transferred more than 11 times.

Request Syntax

```
POST /contact/transfer HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "ContactFlowId": "string",
   "ContactId": "string",
   "InstanceId": "string",
   "QueueId": "string",
   "UserId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

ContactFlowId

The identifier of the flow.

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Type: String

Required: No

UserId

The identifier for the user. This can be the ID or the ARN of the user.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ContactArn": "string",
   "ContactId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ContactArn

The Amazon Resource Name (ARN) of the contact.

Type: String

ContactId

The identifier of the contact in this instance of Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UntagContact

Service: Amazon Connect Service

Removes the specified tags from the contact resource. For more information about this API is used, see Set up granular billing for a detailed view of your Amazon Connect usage.

Request Syntax

```
DELETE /contact/tags/InstanceId/ContactId?TagKeys=TagKeys HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TagKeys

A list of tag keys. Existing tags on the contact whose keys are members of this list will be removed.

Array Members: Minimum number of 1 item. Maximum number of 6 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

UpdateAgentStatus

Service: Amazon Connect Service

Updates agent status.

Request Syntax

```
POST /agent-status/InstanceId/AgentStatusId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "DisplayOrder": number,
   "Name": "string",
   "ResetOrderNumber": boolean,
   "State": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

AgentStatusId

The identifier of the agent status.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the agent status.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Required: No

DisplayOrder

The display order of the agent status.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

Name

The name of the agent status.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

ResetOrderNumber

A number indicating the reset order of the agent status.

Type: Boolean

Required: No

State

The state of the agent status.

Type: String

Valid Values: `ENABLED | DISABLED`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateAuthenticationProfile

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change. To request access to this API, contact Support.

Updates the selected authentication profile.

Request Syntax

```
POST /authentication-profiles/InstanceId/AuthenticationProfileId HTTP/1.1
Content-type: application/json

{
   "AllowedIps": [ "string" ],
   "BlockedIps": [ "string" ],
   "Description": "string",
   "Name": "string",
   "PeriodicSessionDuration": number,
   "SessionInactivityDuration": number,
   "SessionInactivityHandlingEnabled": boolean
}
```

URI Request Parameters

The request uses the following URI parameters.

AuthenticationProfileId

A unique identifier for the authentication profile.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AllowedIps

A list of IP address range strings that are allowed to access the instance. For more information on how to configure IP addresses, seeConfigure session timeouts in the *Amazon Connect Administrator Guide*.

Type: Array of strings

Length Constraints: Minimum length of 2. Maximum length of 50.

Pattern: `^[A-Za-z0-9:/]*$`

Required: No

BlockedIps

A list of IP address range strings that are blocked from accessing the instance. For more information on how to configure IP addresses, For more information on how to configure IP addresses, see Configure IP-based access control in the *Amazon Connect Administrator Guide*.

Type: Array of strings

Length Constraints: Minimum length of 2. Maximum length of 50.

Pattern: `^[A-Za-z0-9:/]*$`

Required: No

Description

The description for the authentication profile.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name for the authentication profile.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

PeriodicSessionDuration

This parameter has been deprecated.

The short lived session duration configuration for users logged in to Amazon Connect, in minutes. This value determines the maximum possible time before an agent is authenticated. For more information, For more information on how to configure IP addresses, see Configure session timeouts in the *Amazon Connect Administrator Guide*.

Type: Integer

Valid Range: Minimum value of 10. Maximum value of 60.

Required: No

SessionInactivityDuration

The period, in minutes, before an agent is automatically signed out of the contact center when they go inactive.

Type: Integer

Valid Range: Minimum value of 15. Maximum value of 720.

Required: No

SessionInactivityHandlingEnabled

Determines if automatic logout on user inactivity is enabled.

Type: Boolean

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContact

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Adds or updates user-defined contact information associated with the specified contact. At least one field to be updated must be present in the request.

> **Important**
>
> You can add or update user-defined contact information for both ongoing and completed contacts.

Request Syntax

```
POST /contacts/InstanceId/ContactId HTTP/1.1
Content-type: application/json

{
   "CustomerEndpoint": {
      "Address": "string",
      "Type": "string"
   },
   "Description": "string",
   "Name": "string",
   "QueueInfo": {
      "Id": "string"
   },
   "References": {
      "string" : {
         "Arn": "string",
         "Status": "string",
         "StatusReason": "string",
         "Type": "string",
         "Value": "string"
      }
   },
   "SegmentAttributes": {
      "string" : {
         "ValueArn": "string",
         "ValueInteger": number,
```

```
            "ValueList": [
               "SegmentAttributeValue"
            ],
            "ValueMap": {
               "string" : "SegmentAttributeValue"
            },
            "ValueString": "string"
         }
      },
      "SystemEndpoint": {
         "Address": "string",
         "Type": "string"
      },
      "UserInfo": {
         "UserId": "string"
      }
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with your contact center.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

CustomerEndpoint

The endpoint of the customer for which the contact was initiated. For external audio contacts, this is usually the end customer's phone number. This value can only be updated for external audio contacts. For more information, see Amazon Connect Contact Lens integration in the *Amazon Connect Administrator Guide*.

Type: Endpoint object

Required: No

Description

The description of the contact.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

Name

The name of the contact.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

QueueInfo

Information about the queue associated with a contact. This parameter can only be updated for external audio contacts. It is used when you integrate third-party systems with Contact Lens for analytics. For more information, see Amazon Connect Contact Lens integration in the *Amazon Connect Administrator Guide*.

Type: QueueInfoInput object

Required: No

References

Well-formed data on contact, shown to agents on Contact Control Panel (CCP).

Type: String to Reference object map

Key Length Constraints: Minimum length of 1. Maximum length of 4096.

Required: No

SegmentAttributes

A set of system defined key-value pairs stored on individual contact segments (unique contact ID) using an attribute map. The attributes are standard Amazon Connect attributes. They can be accessed in flows.

Attribute keys can include only alphanumeric, -, and _.

This field can be used to show channel subtype, such as `connect:Guide`.

Contact Expiry, and user-defined attributes (String - String) that are defined in predefined attributes, can be updated by using the UpdateContact API.

Type: String to SegmentAttributeValue object map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

SystemEndpoint

External system endpoint for the contact was initiated. For external audio contacts, this is the phone number of the external system such as the contact center. This value can only be updated for external audio contacts. For more information, see Amazon Connect Contact Lens integration in the *Amazon Connect Administrator Guide*.

Type: Endpoint object

Required: No

UserInfo

Information about the agent associated with a contact. This parameter can only be updated for external audio contacts. It is used when you integrate third-party systems with Contact Lens for analytics. For more information, see Amazon Connect Contact Lens integration in the *Amazon Connect Administrator Guide*.

Type: UserInfo object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

- AWS SDK for Ruby V3

UpdateContactAttributes

Service: Amazon Connect Service

Creates or updates user-defined contact attributes associated with the specified contact.

You can create or update user-defined attributes for both ongoing and completed contacts. For example, while the call is active, you can update the customer's name or the reason the customer called. You can add notes about steps that the agent took during the call that display to the next agent that takes the call. You can also update attributes for a contact using data from your CRM application and save the data with the contact in Amazon Connect. You could also flag calls for additional analysis, such as legal review or to identify abusive callers.

Contact attributes are available in Amazon Connect for 24 months, and are then deleted. For information about contact record retention and the maximum size of the contact record attributes section, see Feature specifications in the *Amazon Connect Administrator Guide*.

Request Syntax

```
POST /contact/attributes HTTP/1.1
Content-type: application/json

{
   "Attributes": {
      "string" : "string"
   },
   "InitialContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attributes

The Amazon Connect attributes. These attributes can be accessed in flows just like any other contact attributes.

You can have up to 32,768 UTF-8 bytes across all attributes for a contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

In the Set contact attributes block, when the attributes for a contact exceed 32 KB, the contact is routed down the Error branch of the flow. As a mitigation, consider the following options:

- Remove unnecessary attributes by setting their values to empty.
- If the attributes are only used in one flow and don't need to be referred to outside of that flow (for example, by a Lambda or another flow), then use flow attributes. This way you aren't needlessly persisting the 32 KB of information from one flow to another. For more information, see Flow block: Set contact attributes in the *Amazon Connect Administrator Guide*.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: Yes

InitialContactId

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

UpdateContactEvaluation

Service: Amazon Connect Service

Updates details about a contact evaluation in the specified Amazon Connect instance. A contact evaluation must be in draft state. Answers included in the request are merged with existing answers for the given evaluation. An answer or note can be deleted by passing an empty object ({}) to the question identifier.

Request Syntax

```
POST /contact-evaluations/InstanceId/EvaluationId HTTP/1.1
Content-type: application/json

{
   "Answers": {
      "string" : {
         "Value": { ... }
      }
   },
   "Notes": {
      "string" : {
         "Value": "string"
      }
   },
   "UpdatedBy": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationId

A unique identifier for the contact evaluation.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Answers

A map of question identifiers to answer value.

Type: String to EvaluationAnswerInput object map

Map Entries: Maximum number of 100 items.

Key Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

Notes

A map of question identifiers to note value.

Type: String to EvaluationNote object map

Map Entries: Maximum number of 100 items.

Key Length Constraints: Minimum length of 1. Maximum length of 500.

Required: No

UpdatedBy

The ID of the user who updated the contact evaluation.

Type: EvaluatorUserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "EvaluationArn": "string",
   "EvaluationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationArn

The Amazon Resource Name (ARN) for the contact evaluation resource.

Type: String

EvaluationId

A unique identifier for the contact evaluation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example updates a previously started contact evaluation.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationId": "[evaluation_id]",
   "Answers": {
      "question-1-111": {
         "Value": {
            "StringValue": "question-answer-1-111"
         }
      },
      "question-1-222": {
```

```
         "Value": {
            "StringValue": "third-option"
         }
      },
      "question-2-1": {
         "Value": {
            "StringValue": "question-custom-answer-2-1"
         }
      },
      "question-2-222": {
         "Value": {
            "NumericValue": 12
         }
      }
   },
    "Notes": {
      "question-1-111": {
         "Value": "question-1-111 notes"
      },
      "question-2-222": {
         "Value": "question-2-222 notes"
      },
      "section-1": {
         "Value": "section-1 notes"
      },
      "section-2": {
         "Value": "section-2 notes"
      }
   }
}
```

Sample Response

```
{
   "EvaluationId": "[evaluation_id]",
   "EvaluationArn": "arn:aws:connect:[aws_region_code]:[account_id]:instance/
[instance_id]/contact-evaluation/[evaluation_id]"
}
```

UpdateContactFlowContent

Service: Amazon Connect Service

Updates the specified flow.

You can also create and update flows using the Amazon Connect Flow language.

Use the $SAVED alias in the request to describe the SAVED content of a Flow. For example, `arn:aws:.../contact-flow/{id}:$SAVED`. After a flow is published, $SAVED needs to be supplied to view saved content that has not been published.

Request Syntax

```
POST /contact-flows/InstanceId/ContactFlowId/content HTTP/1.1
Content-type: application/json

{
   "Content": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

The JSON string that represents the content of the flow. For an example, see Example flow in Amazon Connect Flow language.

Length Constraints: Minimum length of 1. Maximum length of 256000.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidContactFlowException

The flow is not valid.

problems

The problems with the flow. Please fix before trying again.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContactFlowMetadata

Service: Amazon Connect Service

Updates metadata about specified flow.

Request Syntax

```
POST /contact-flows/InstanceId/ContactFlowId/metadata HTTP/1.1
Content-type: application/json

{
   "ContactFlowState": "string",
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactFlowState

The state of flow.

Type: String

Valid Values: `ACTIVE | ARCHIVED`

Required: No

Description

The description of the flow.

Type: String

Required: No

Name

The name of the flow.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContactFlowModuleAlias

Service: Amazon Connect Service

Updates a specific Aliases metadata, including the version it's tied to, it's name, and description.

Request Syntax

```
POST /contact-flow-modules/InstanceId/ContactFlowModuleId/alias/AliasId HTTP/1.1
Content-type: application/json

{
   "ContactFlowModuleVersion": number,
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

AliasId

The identifier of the alias.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactFlowModuleVersion

The version of the flow module.

Type: Long

Valid Range: Minimum value of 1.

Required: No

Description

The description of the alias.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `.*\S.*`

Required: No

Name

The name of the alias.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `.*\S.*`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Sample Request

This example illustrates one usage of UpdateContactFlowModuleAlias.

```
{
  "Name": "production-v2",
  "Description": "Updated production version with new features",
  "ContactFlowModuleVersion": 3
}
```

Sample Response

This example illustrates one usage of UpdateContactFlowModuleAlias.

```
HTTP/1.1 200 OK
```

UpdateContactFlowModuleContent

Service: Amazon Connect Service

Updates specified flow module for the specified Amazon Connect instance.

Use the $SAVED alias in the request to describe the SAVED content of a Flow. For example, `arn:aws:.../contact-flow/{id}:$SAVED`. After a flow is published, $SAVED needs to be supplied to view saved content that has not been published.

Request Syntax

```
POST /contact-flow-modules/InstanceId/ContactFlowModuleId/content HTTP/1.1
Content-type: application/json

{
   "Content": "string",
   "Settings": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

The JSON string that represents the content of the flow. For an example, see Example flow in Amazon Connect Flow language.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256000.

Required: No

Settings

Serialized JSON string of the flow module Settings schema.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidContactFlowModuleException

The problems with the module. Please fix before trying again.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContactFlowModuleMetadata

Service: Amazon Connect Service

Updates metadata about specified flow module.

Request Syntax

```
POST /contact-flow-modules/InstanceId/ContactFlowModuleId/metadata HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "State": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowModuleId

The identifier of the flow module.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the flow module.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `.*\S.*`

Required: No

Name

The name of the flow module.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `.*\S.*`

Required: No

State

The state of flow module.

Type: String

Valid Values: `ACTIVE | ARCHIVED`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContactFlowName

Service: Amazon Connect Service

The name of the flow.

You can also create and update flows using the Amazon Connect Flow language.

Request Syntax

```
POST /contact-flows/InstanceId/ContactFlowId/name HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactFlowId

The identifier of the flow.

Length Constraints: Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the flow.

Type: String

Required: No

Name

The name of the flow.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateContactRoutingData

Service: Amazon Connect Service

Updates routing priority and age on the contact (**QueuePriority** and **QueueTimeAdjustmentInSeconds**). These properties can be used to change a customer's position in the queue. For example, you can move a contact to the back of the queue by setting a lower routing priority relative to other contacts in queue; or you can move a contact to the front of the queue by increasing the routing age which will make the contact look artificially older and therefore higher up in the first-in-first-out routing order. Note that adjusting the routing age of a contact affects only its position in queue, and not its actual queue wait time as reported through metrics. These properties can also be updated by using the Set routing priority / age flow block.

> **Note**
>
> Either **QueuePriority** or **QueueTimeAdjustmentInSeconds** should be provided within the request body, but not both.

Request Syntax

```
POST /contacts/InstanceId/ContactId/routing-data HTTP/1.1
Content-type: application/json

{
   "QueuePriority": number,
   "QueueTimeAdjustmentSeconds": number,
   "RoutingCriteria": {
      "Steps": [
         {
            "Expiry": {
               "DurationInSeconds": number
            },
            "Expression": {
               "AndExpression": [
                  "Expression"
               ],
               "AttributeCondition": {
                  "ComparisonOperator": "string",
                  "MatchCriteria": {
                     "AgentsCriteria": {
```

```
                        "AgentIds": [ "string" ]
                     }
                  },
                  "Name": "string",
                  "ProficiencyLevel": number,
                  "Range": {
                     "MaxProficiencyLevel": number,
                     "MinProficiencyLevel": number
                  },
                  "Value": "string"
               },
               "NotAttributeCondition": {
                  "ComparisonOperator": "string",
                  "MatchCriteria": {
                     "AgentsCriteria": {
                        "AgentIds": [ "string" ]
                     }
                  },
                  "Name": "string",
                  "ProficiencyLevel": number,
                  "Range": {
                     "MaxProficiencyLevel": number,
                     "MinProficiencyLevel": number
                  },
                  "Value": "string"
               },
               "OrExpression": [
                  "Expression"
               ]
            }
         }
      ]
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

QueuePriority

Priority of the contact in the queue. The default priority for new contacts is 5. You can raise the priority of a contact compared to other contacts in the queue by assigning them a higher priority, such as 1 or 2.

Type: Long

Valid Range: Minimum value of 1. Maximum value of 9223372036854775807.

Required: No

QueueTimeAdjustmentSeconds

The number of seconds to add or subtract from the contact's routing age. Contacts are routed to agents on a first-come, first-serve basis. This means that changing their amount of time in queue compared to others also changes their position in queue.

Type: Integer

Required: No

RoutingCriteria

Updates the routing criteria on the contact. These properties can be used to change how a contact is routed within the queue.

Type: RoutingCriteriaInput object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidActiveRegionException

This exception occurs when an API request is made to a non-active region in an Amazon Connect instance configured with Amazon Connect Global Resiliency. For example, if the active region is US West (Oregon) and a request is made to US East (N. Virginia), the exception will be returned.

HTTP Status Code: 400

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Preferred Agent Routing, without Expiry timer

In this example, we are setting a single-step routing criteria on a contact, to specify that this contact can be targeted only to this particular agent. Note that in order to route, the contact must still first be placed into a queue; in order to be offered the contact in their Contact Control Panel, the agent must have that queue in their routing profile and be in an available state for routing.

Note that in this specific example, there is no expiration timer set for this step. This means that so long as this routing criteria is set on the contact, this contact will not be offered to any other agent. In most scenarios, we would recommend to set an Expiry timer, so that if the agent is not available within some amount of time, you can fallback the contact to any agent in queue, or any agent matching some other condition. See Example 3 for an example showing the Expiry timer.

```
{
    "InstanceId": "5d463351-d515-4241-b8f3-bf78da37770d",
    "ContactId": "44c84896-243d-43bc-ad8c-76fc8baadced",
    "QueueTimeAdjustmentSeconds": 60,
    "RoutingCriteria": {
```

```
        "Steps": [{
            "Expression": {
                "AttributeCondition": {
                    "ComparisonOperator": "Match",
                    "MatchCriteria": {
                        "AgentsCriteria": {
                            "AgentIds": ["39bc9666-4d3c-4558-b2ad-9bab4bd48568"]
                        }
                    }
                }
            }
        }
        ]
    }
}
```

Route only to agents with a specific predefined attribute, without Expiry timer

In this example, we are setting a single-step routing criteria on a contact, to specify that this contact can only be targeted to agents in this queue who have >= 1/5 proficiency level in `Technology:Cloudwatch`.

Note that in this specific example, there is no expiration timer set for this step. This means that so long as this routing criteria is set on the contact, this contact will not be offered to any agent in queue unless they have >= 1/5 proficiency level in `Technology:Cloudwatch`.

Additionally, in this specific example, QueueTimeAdjustmentSeconds was set to 60 for this contact, meaning that this contact will look 60 seconds older than its true age to the routing engine, which may put it closer to the head of the queue relative to other contacts.

```
{
    "InstanceId": "5d463351-d515-4241-b8f3-bf78da37770d",
    "ContactId": "90422764-7f29-4359-943d-d84be5e53642",
    "QueueTimeAdjustmentSeconds": 60,
    "RoutingCriteria": {
        "Steps": [
            {
                "Expression": {
                    "AndExpression": [
                        {
                            "AttributeCondition": {
                                "Name": "Technology",
```

```
                                "Value": "Cloudwatch",
                                "ProficiencyLevel": 1,
                                "ComparisonOperator": "NumberGreaterOrEqualTo"
                            }
                        }
                    ]
                }
            }
        ]
    }
}
```

Route using an OrExpression, with Expiry timer

In this example, we are setting a single-step routing criteria on a contact with an expiry timer and an OR condition. During this step, the contact can target only agents in queue who either have(>= 1/5 proficiency level in `Technology:Cloudwatch`), OR have both (>= 3/5 proficiency level in `Technology:S3` AND >= 1/5 proficiency level in `Technology:DynamoDB`).

Since in this example there is an Expiry set with a DurationInSeconds of 60, if no agents matching the expressions become available to take the contact within 60 seconds, then the step will expire off, and the contact could be offered to any longest available agent in queue.

Additionally, in this specific example, QueueTimeAdjustmentSeconds was set to 60 for this contact, meaning that this contact will look 60 seconds older than its true age to the routing engine, which may put it closer to the head of the queue relative to other contacts.

```
{
    "InstanceId": "5d463351-d515-4241-b8f3-bf78da37770d",
    "ContactId": "90422764-7f29-4359-943d-d84be5e53642",
    "QueueTimeAdjustmentSeconds": 60,
    "RoutingCriteria": {
        "Steps": [
            {   "Expiry" : {
                "DurationInSeconds": 60
            },
                "Expression": {
                    "OrExpression": [
                        {
                            "AndExpression": [
                                {
                                    "AttributeCondition": {
```

```
                                    "Name": "Technology",
                                    "Value": "Cloudwatch",
                                    "ProficiencyLevel": 1,
                                    "ComparisonOperator": "NumberGreaterOrEqualTo"
                                }
                            }
                        ]
                    },
                    {
                        "AndExpression": [
                            {
                                "AttributeCondition": {
                                    "Name": "Technology",
                                    "Value": "S3",
                                    "ProficiencyLevel": 3,
                                    "ComparisonOperator": "NumberGreaterOrEqualTo"
                                }
                            },
                            {
                                "AttributeCondition": {
                                    "Name": "Technology",
                                    "Value": "DynamoDB",
                                    "ProficiencyLevel": 1,
                                    "ComparisonOperator": "NumberGreaterOrEqualTo"
                                }
                            }
                        ]
                    }
                ]
            }
        }
    ]
  }
}
```

Two-step routing criteria

In this example, we are setting a two-step routing criteria. Step 1 restricts this contact so that only the agent matching the specified user ID can be offered the contact, with an expiry of 30 seconds. Note that this agent must be in Available status with the queue the contact is in their Routing Profile in order to be offered the contact. If this agent does not accept the contact within 30 seconds, then the contact will instead be offered to an agent within the queue with at least 5/5 proficiency level in language English.

```
{
    "InstanceId": "5d463351-d515-4241-b8f3-bf78da37770d",
    "ContactId": "90422764-7f29-4359-943d-d84be5e53642",
    "RoutingCriteria": {
        "Steps": [
            {
                "Expression": {
                    "AttributeCondition": {
                        "ComparisonOperator": "Match",
                        "MatchCriteria": {
                            "AgentsCriteria": {
                                "AgentIds": ["39bc9666-4d3c-4558-b2ad-9bab4bd48568"]
                            }
                        }
                    }
                },
                "Expiry": {
                    "DurationInSeconds": 30
                }
            },
            {
                "Expression": {
                    "AttributeCondition": {
                        "Name": "Language",
                        "Value": "English",

UpdateContactSchedule

Service: Amazon Connect Service

Updates the scheduled time of a task contact that is already scheduled.

Request Syntax

```
POST /contact/schedule HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string",
   "ScheduledTime": number
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ScheduledTime

The timestamp, in Unix Epoch seconds format, at which to start running the inbound flow. The scheduled time cannot be in the past. It must be within up to 6 days in future.

Type: Timestamp

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateDataTableAttribute

Service: Amazon Connect Service

Updates all properties for an attribute using all properties from CreateDataTableAttribute. There are no other granular update endpoints. It does not act as a patch operation - all properties must be provided. System managed attributes are not mutable by customers. Changing an attribute's validation does not invalidate existing values since validation only runs when values are created or updated.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/attributes/AttributeName HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "Primary": boolean,
   "Validation": {
      "Enum": {
         "Strict": boolean,
         "Values": [ "string" ]
      },
      "ExclusiveMaximum": number,
      "ExclusiveMinimum": number,
      "IgnoreCase": boolean,
      "Maximum": number,
      "MaxLength": number,
      "MaxValues": number,
      "Minimum": number,
      "MinLength": number,
      "MinValues": number,
      "MultipleOf": number
   },
   "ValueType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

AttributeName

The current name of the attribute to update. Used as an identifier since attribute names can be changed.

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The updated description for the attribute.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Pattern: `^[\\P{C}\r\n\t]+$`

Required: No

Name

The new name for the attribute. Must conform to Connect human readable string specification and be unique within the data table.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

Primary

Whether the attribute should be treated as a primary key. Converting to primary attribute requires existing values to maintain uniqueness.

Type: Boolean

Required: No

Validation

The updated validation rules for the attribute. Changes do not affect existing values until they are modified.

Type: Validation object

Required: No

ValueType

The updated value type for the attribute. When changing value types, existing values are not deleted but may return default values if incompatible.

Type: String

Valid Values: `TEXT | NUMBER | BOOLEAN | TEXT_LIST | NUMBER_LIST`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   },
   "Name": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LockVersion

The new lock version for the attribute after the update.

Type: DataTableLockVersion object

Name

The trimmed name and identifier for the updated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

LimitExceededException

The allowed limit for the resource has been exceeded.

Message

The message about the limit.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateDataTableMetadata

Service: Amazon Connect Service

Updates the metadata properties of a data table. Accepts all fields similar to CreateDataTable, except for fields and tags. There are no other granular update endpoints. It does not act as a patch operation - all properties must be provided or defaults will be used. Fields follow the same requirements as CreateDataTable.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "TimeZone": "string",
   "ValueLockLevel": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias. If the version is provided as part of the identifier or ARN, the version must be $LATEST. Providing any other alias fails with an error.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The updated description for the data table. Must conform to Connect human readable string specification and have 0-250 characters.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Pattern: `^[\\P{C}\r\n\t]+$`

Required: No

Name

The updated name for the data table. Must conform to Connect human readable string specification and have 1-127 characters. Must be unique for the instance using case-insensitive comparison.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `^[\p{L}\p{Z}\p{N}\-_.:=@'|]+$`

Required: Yes

TimeZone

The updated IANA timezone identifier to use when resolving time based dynamic values.

Type: String

Required: Yes

ValueLockLevel

The updated value lock level for the data table. One of DATA_TABLE, PRIMARY_VALUE, ATTRIBUTE, VALUE, and NONE.

Type: String

Valid Values: NONE | DATA_TABLE | PRIMARY_VALUE | ATTRIBUTE | VALUE

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LockVersion

The new lock version for the data table after the update.

Type: DataTableLockVersion object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateDataTablePrimaryValues

Service: Amazon Connect Service

Updates the primary values for a record. This operation affects all existing values that are currently associated to the record and its primary values. Users that have restrictions on attributes and/or primary values are not authorized to use this endpoint. The combination of new primary values must be unique within the table.

Request Syntax

```
POST /data-tables/InstanceId/DataTableId/values/update-primary HTTP/1.1
Content-type: application/json

{
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   },
   "NewPrimaryValues": [
      {
         "AttributeName": "string",
         "Value": "string"
      }
   ],
   "PrimaryValues": [
      {
         "AttributeName": "string",
         "Value": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DataTableId

The unique identifier for the data table. Must also accept the table ARN with or without a version alias. If the version is provided as part of the identifier or ARN, the version must be one of the two available system managed aliases, $SAVED or $LATEST.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The unique identifier for the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

LockVersion

The lock version information required for optimistic locking to prevent concurrent modifications.

Type: DataTableLockVersion object

Required: Yes

NewPrimaryValues

The new primary values for the record. Required and must include values for all primary attributes. The combination must be unique within the table.

Type: Array of PrimaryValue objects

Required: Yes

PrimaryValues

The current primary values for the record. Required and must include values for all primary attributes. Fails if the table has primary attributes and some primary values are omitted.

Type: Array of PrimaryValue objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "LockVersion": {
      "Attribute": "string",
      "DataTable": "string",
      "PrimaryValues": "string",
      "Value": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

LockVersion

The updated lock version information for the data table and affected components after the primary values change.

Type: DataTableLockVersion object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateEmailAddressMetadata

Service: Amazon Connect Service

Updates an email address metadata. For more information about email addresses, see Create email addresses in the Amazon Connect Administrator Guide.

Request Syntax

```
POST /email-addresses/InstanceId/EmailAddressId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Description": "string",
   "DisplayName": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

EmailAddressId

The identifier of the email address.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Description

The description of the email address.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

DisplayName

The display name of email address.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EmailAddressArn": "string",
   "EmailAddressId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EmailAddressArn

The Amazon Resource Name (ARN) of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EmailAddressId

The identifier of the email address.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateEvaluationForm

Service: Amazon Connect Service

Updates details about a specific evaluation form version in the specified Amazon Connect instance. Question and section identifiers cannot be duplicated within the same evaluation form.

This operation does not support partial updates. Instead it does a full update of evaluation form content.

Request Syntax

```
PUT /evaluation-forms/InstanceId/EvaluationFormId HTTP/1.1
Content-type: application/json

{
   "AsDraft": boolean,
   "AutoEvaluationConfiguration": {
      "Enabled": boolean
   },
   "ClientToken": "string",
   "CreateNewVersion": boolean,
   "Description": "string",
   "EvaluationFormVersion": number,
   "Items": [
      { ... }
   ],
   "LanguageConfiguration": {
      "FormLanguage": "string"
   },
   "ReviewConfiguration": {
      "EligibilityDays": number,
      "ReviewNotificationRecipients": [
         {
            "Type": "string",
            "Value": {
               "UserId": "string"
            }
         }
      ]
   },
   "ScoringStrategy": {
      "Mode": "string",
      "Status": "string"
```

```
    },
    "TargetConfiguration": {
       "ContactInteractionType": "string"
    },
    "Title": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

EvaluationFormId

The unique identifier for the evaluation form.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AsDraft

A boolean flag indicating whether to update evaluation form to draft state.

Type: Boolean

Required: No

AutoEvaluationConfiguration

Whether automated evaluations are enabled.

Type: EvaluationFormAutoEvaluationConfiguration object

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

CreateNewVersion

A flag indicating whether the operation must create a new version.

Type: Boolean

Required: No

Description

The description of the evaluation form.

Type: String

Required: No

EvaluationFormVersion

A version of the evaluation form to update.

Type: Integer

Required: Yes

Items

Items that are part of the evaluation form. The total number of sections and questions must not exceed 100 each. Questions must be contained in a section.

Type: Array of EvaluationFormItem objects

Required: Yes

LanguageConfiguration

Configuration for language settings of the evaluation form.

Type: EvaluationFormLanguageConfiguration object

Required: No

ReviewConfiguration

Configuration for evaluation review settings of the evaluation form.

Type: EvaluationReviewConfiguration object

Required: No

ScoringStrategy

A scoring strategy of the evaluation form.

Type: EvaluationFormScoringStrategy object

Required: No

TargetConfiguration

Configuration that specifies the target for the evaluation form.

Type: EvaluationFormTargetConfiguration object

Required: No

Title

A title of the evaluation form.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "EvaluationFormArn": "string",
   "EvaluationFormId": "string",
   "EvaluationFormVersion": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EvaluationFormArn

The Amazon Resource Name (ARN) for the contact evaluation resource.

Type: String

EvaluationFormId

The unique identifier for the evaluation form.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

EvaluationFormVersion

The version of the updated evaluation form resource.

Type: Integer

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example updates version 2 of an evaluation form. This results in another, new version.

Sample Request

```
{
   "InstanceId": "[instance_id]",
   "EvaluationFormId": "[evaluation_form_id]",
   "EvaluationFormVersion": 2,
   "CreateNewVersion": true,
   "Title": "form-title",
   "Description": "form-description",
   "ScoringStrategy": {
      "Mode": "SECTION_ONLY",
      "Status": "ENABLED"

UpdateHoursOfOperation

Service: Amazon Connect Service

Updates the hours of operation.

Request Syntax

```
POST /hours-of-operations/InstanceId/HoursOfOperationId HTTP/1.1
Content-type: application/json

{
   "Config": [
      {
         "Day": "string",
         "EndTime": {
            "Hours": number,
            "Minutes": number
         },
         "StartTime": {
            "Hours": number,
            "Minutes": number
         }
      }
   ],
   "Description": "string",
   "Name": "string",
   "TimeZone": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier of the hours of operation.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Config

Configuration information of the hours of operation.

Type: Array of HoursOfOperationConfig objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: No

Description

The description of the hours of operation.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Required: No

Name

The name of the hours of operation.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

TimeZone

The time zone of the hours of operation.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateHoursOfOperationOverride

Service: Amazon Connect Service

Update the hours of operation override.

Request Syntax

```
POST /hours-of-operations/InstanceId/HoursOfOperationId/
overrides/HoursOfOperationOverrideId HTTP/1.1
Content-type: application/json

{
   "Config": [
      {
         "Day": "string",
         "EndTime": {
            "Hours": number,
            "Minutes": number
         },
         "StartTime": {
            "Hours": number,
            "Minutes": number
         }
      }
   ],
   "Description": "string",
   "EffectiveFrom": "string",
   "EffectiveTill": "string",
   "Name": "string",
   "OverrideType": "string",
   "RecurrenceConfig": {
      "RecurrencePattern": {
         "ByMonth": [ number ],
         "ByMonthDay": [ number ],
         "ByWeekdayOccurrence": [ number ],
         "Frequency": "string",
         "Interval": number
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

HoursOfOperationId

The identifier for the hours of operation.

Required: Yes

HoursOfOperationOverrideId

The identifier for the hours of operation override.

Length Constraints: Minimum length of 1. Maximum length of 36.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Config

Configuration information for the hours of operation override: day, start time, and end time.

Type: Array of HoursOfOperationOverrideConfig objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: No

Description

The description of the hours of operation override.

Type: String

Pattern: `^[\P{C}\r\n\t]{1,250}$`

Required: No

EffectiveFrom

The date from when the hours of operation override would be effective.

Type: String

Pattern: `^\d{4}-\d{2}-\d{2}$`

Required: No

EffectiveTill

The date until the hours of operation override is effective.

Type: String

Pattern: `^\d{4}-\d{2}-\d{2}$`

Required: No

Name

The name of the hours of operation override.

Type: String

Pattern: `^[\P{C}\r\n\t]{1,127}$`

Required: No

OverrideType

Whether the override will be defined as a *standard* or as a *recurring event*.

For more information about how override types are applied, see Build your list of overrides in the *Administrator Guide*.

Type: String

Valid Values: `STANDARD | OPEN | CLOSED`

Required: No

RecurrenceConfig

Configuration for a recurring event.

Type: RecurrenceConfig object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateInstanceAttribute

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Updates the value for the specified attribute type.

Request Syntax

```
POST /instance/InstanceId/attribute/AttributeType HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Value": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

AttributeType

The type of attribute.

> **Note**
>
> Only allowlisted customers can consume USE_CUSTOM_TTS_VOICES. To access this feature, contact AWS Support for allowlisting.

> **Note**
>
> If you set the attribute type as `MESSAGE_STREAMING`, you need to update the Lex bot alias resource based policy to include the `lex:RecognizeMessageAsync` action for the connect instance ARN resource.

Valid Values: `INBOUND_CALLS | OUTBOUND_CALLS | CONTACTFLOW_LOGS | CONTACT_LENS | AUTO_RESOLVE_BEST_VOICES | USE_CUSTOM_TTS_VOICES`

```
| EARLY_MEDIA | MULTI_PARTY_CONFERENCE | HIGH_VOLUME_OUTBOUND
| ENHANCED_CONTACT_MONITORING | ENHANCED_CHAT_MONITORING |
MULTI_PARTY_CHAT_CONFERENCE | MESSAGE_STREAMING
```

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Value

The value for the attribute. Maximum character limit is 100.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateInstanceStorageConfig

Service: Amazon Connect Service

This API is in preview release for Amazon Connect and is subject to change.

Updates an existing configuration for a resource type. This API is idempotent.

Request Syntax

```
POST /instance/InstanceId/storage-config/AssociationId?resourceType=ResourceType
 HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "StorageConfig": {
      "AssociationId": "string",
      "KinesisFirehoseConfig": {
         "FirehoseArn": "string"
      },
      "KinesisStreamConfig": {
         "StreamArn": "string"
      },
      "KinesisVideoStreamConfig": {
         "EncryptionConfig": {
            "EncryptionType": "string",
            "KeyId": "string"
         },
         "Prefix": "string",
         "RetentionPeriodHours": number
      },
      "S3Config": {
         "BucketName": "string",
         "BucketPrefix": "string",
         "EncryptionConfig": {
            "EncryptionType": "string",
            "KeyId": "string"
         }
      },
      "StorageType": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

AssociationId

The existing association identifier that uniquely identifies the resource type and storage config for the given instance ID.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

ResourceType

A valid resource type.

Valid Values: `CHAT_TRANSCRIPTS | CALL_RECORDINGS | SCHEDULED_REPORTS | MEDIA_STREAMS | CONTACT_TRACE_RECORDS | AGENT_EVENTS | REAL_TIME_CONTACT_ANALYSIS_SEGMENTS | ATTACHMENTS | CONTACT_EVALUATIONS | SCREEN_RECORDINGS | REAL_TIME_CONTACT_ANALYSIS_CHAT_SEGMENTS | REAL_TIME_CONTACT_ANALYSIS_VOICE_SEGMENTS | EMAIL_MESSAGES`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

StorageConfig

The storage configuration for the instance.

Type: InstanceStorageConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateNotificationContent

Service: Amazon Connect Service

Updates the localized content of an existing notification. This operation applies to all users for whom the notification was sent.

Request Syntax

```
POST /notifications/InstanceId/NotificationId HTTP/1.1
Content-type: application/json

{
   "Content": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

NotificationId

The unique identifier for the notification to update.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

The updated localized content of the notification. A map of locale codes and values. Maximum 500 characters per locale.

Type: String to string map

Valid Keys: `en_US | de_DE | es_ES | fr_FR | id_ID | it_IT | ja_JP | ko_KR | pt_BR | zh_CN | zh_TW`

Value Length Constraints: Minimum length of 0. Maximum length of 500.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateParticipantAuthentication

Service: Amazon Connect Service

Instructs Amazon Connect to resume the authentication process. The subsequent actions depend on the request body contents:

- **If a code is provided**: Connect retrieves the identity information from Amazon Cognito and imports it into Connect Customer Profiles.
- **If an error is provided**: The error branch of the Authenticate Customer block is executed.

> **Note**
>
> The API returns a success response to acknowledge the request. However, the interaction and exchange of identity information occur asynchronously after the response is returned.

Request Syntax

```
POST /contact/update-participant-authentication HTTP/1.1
Content-type: application/json

{
   "Code": "string",
   "Error": "string",
   "ErrorDescription": "string",
   "InstanceId": "string",
   "State": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Code

The code query parameter provided by Cognito in the `redirectUri`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Required: No

Error

The `error` query parameter provided by Cognito in the `redirectUri`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^[\x20-\x21\x23-\x5B\x5D-\x7E]*$`

Required: No

ErrorDescription

The `error_description` parameter provided by Cognito in the `redirectUri`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^[\x20-\x21\x23-\x5B\x5D-\x7E]*$`

Required: No

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

State

The `state` query parameter that was provided by Cognito in the `redirectUri`. This will also match the `state` parameter provided in the `AuthenticationUrl` from the GetAuthenticationUrl response.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConflictException

Operation cannot be performed at this time as there is a conflict with another operation or contact state.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateParticipantRoleConfig

Service: Amazon Connect Service

Updates timeouts for when human chat participants are to be considered idle, and when agents are automatically disconnected from a chat due to idleness. You can set four timers:

- Customer idle timeout
- Customer auto-disconnect timeout
- Agent idle timeout
- Agent auto-disconnect timeout

For more information about how chat timeouts work, see Set up chat timeouts for human participants.

Request Syntax

```
PUT /contact/participant-role-config/InstanceId/ContactId HTTP/1.1
Content-type: application/json

{
   "ChannelConfiguration": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

ContactId

The identifier of the contact in this instance of Amazon Connect.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ChannelConfiguration

The Amazon Connect channel you want to configure.

Type: UpdateParticipantRoleConfigChannelInfo object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdatePhoneNumber

Service: Amazon Connect Service

Updates your claimed phone number from its current Amazon Connect instance or traffic distribution group to another Amazon Connect instance or traffic distribution group in the same AWS Region.

> **Important**
>
> After using this API, you must verify that the phone number is attached to the correct flow in the target instance or traffic distribution group. You need to do this because the API switches only the phone number to a new instance or traffic distribution group. It doesn't migrate the flow configuration of the phone number, too.
> You can call DescribePhoneNumber API to verify the status of a previous UpdatePhoneNumber operation.

Request Syntax

```
PUT /phone-number/PhoneNumberId HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "InstanceId": "string",
   "TargetArn": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

PhoneNumberId

A unique identifier for the phone number.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

InstanceId

The identifier of the Amazon Connect instance that phone numbers are claimed to. You can find the instance ID in the Amazon Resource Name (ARN) of the instance. You must enter `InstanceId` or `TargetArn`.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

TargetArn

The Amazon Resource Name (ARN) for Amazon Connect instances or traffic distribution groups that phone number inbound traffic is routed through. You must enter `InstanceId` or `TargetArn`.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "PhoneNumberArn": "string",
   "PhoneNumberId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PhoneNumberArn

The Amazon Resource Name (ARN) of the phone number.

Type: String

PhoneNumberId

A unique identifier for the phone number.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdatePhoneNumberMetadata

Service: Amazon Connect Service

Updates a phone number's metadata.

> **Important**
>
> To verify the status of a previous UpdatePhoneNumberMetadata operation, call the DescribePhoneNumber API.

Request Syntax

```
PUT /phone-number/PhoneNumberId/metadata HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "PhoneNumberDescription": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

PhoneNumberId

The Amazon Resource Name (ARN) or resource ID of the phone number.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

PhoneNumberDescription

The description of the phone number.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `^[\W\S_]*`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

IdempotencyException

An entity with the same name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdatePredefinedAttribute

Service: Amazon Connect Service

Updates a predefined attribute for the specified Amazon Connect instance. A *predefined attribute* is made up of a name and a value.

For the predefined attributes per instance quota, see Amazon Connect quotas.

Use cases

Following are common uses cases for this API:

- Update routing proficiency (for example, agent certification) that has predefined values (for example, a list of possible certifications). For more information, see Create predefined attributes for routing contacts to agents.
- Update an attribute for business unit name that has a list of predefined business unit names used in your organization. This is a use case where information for a contact varies between transfers or conferences. For more information, see Use contact segment attributes.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /predefined-attributes/InstanceId/Name HTTP/1.1
Content-type: application/json

{
   "AttributeConfiguration": {
      "EnableValueValidationOnAssociation": boolean
   },
   "Purposes": [ "string" ],
   "Values": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Name

The name of the predefined attribute.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttributeConfiguration

Custom metadata that is associated to predefined attributes to control behavior in upstream services, such as controlling how a predefined attribute should be displayed in the Amazon Connect admin website.

Type: InputPredefinedAttributeConfiguration object

Required: No

Purposes

Values that enable you to categorize your predefined attributes. You can use them in custom UI elements across the Amazon Connect admin website.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Values

The values of the predefined attribute.

Type: PredefinedAttributeValues object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

The following example shows a request and response.

```
POST https://connect.us-west-2.amazonaws.com/predefined-attributes/InstanceId/Name
 HTTP/1.1
Content-type: application/json
{
    "Values": {
        "StringList": [
            "value1"
        ]
    },
    "Purposes": [
        "proficiency"
    ],
    "Configuration": {
```

```
        "EnableValueValidationOnAssociation": true
    }
}

Response:
200
```

UpdatePrompt

Service: Amazon Connect Service

Updates a prompt.

Request Syntax

```
POST /prompts/InstanceId/PromptId HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "S3Uri": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

PromptId

A unique identifier for the prompt.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

A description of the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name of the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

S3Uri

The URI for the S3 bucket where the prompt is stored. You can provide S3 pre-signed URLs returned by the GetPromptFile API instead of providing S3 URIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000.

Pattern: `s3://\S+/.+|https://\\S+\\.s3\\.\\S+\\.amazonaws\\.com/\\S+`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "PromptARN": "string",
   "PromptId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

PromptARN

The Amazon Resource Name (ARN) of the prompt.

Type: String

PromptId

A unique identifier for the prompt.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueHoursOfOperation

Service: Amazon Connect Service

Updates the hours of operation for the specified queue.

Request Syntax

```
POST /queues/InstanceId/QueueId/hours-of-operation HTTP/1.1
Content-type: application/json

{
   "HoursOfOperationId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

HoursOfOperationId

The identifier for the hours of operation.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueMaxContacts

Service: Amazon Connect Service

Updates the maximum number of contacts allowed in a queue before it is considered full.

Request Syntax

```
POST /queues/InstanceId/QueueId/max-contacts HTTP/1.1
Content-type: application/json

{
   "MaxContacts": number
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

MaxContacts

The maximum number of contacts that can be in the queue before it is considered full.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueName

Service: Amazon Connect Service

Updates the name and description of a queue. At least `Name` or `Description` must be provided.

Request Syntax

```
POST /queues/InstanceId/QueueId/name HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the queue.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name of the queue.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueOutboundCallerConfig

Service: Amazon Connect Service

Updates the outbound caller ID name, number, and outbound whisper flow for a specified queue.

Important

- If the phone number is claimed to a traffic distribution group that was created in the same Region as the Amazon Connect instance where you are calling this API, then you can use a full phone number ARN or a UUID for `OutboundCallerIdNumberId`. However, if the phone number is claimed to a traffic distribution group that is in one Region, and you are calling this API from an instance in another AWS Region that is associated with the traffic distribution group, you must provide a full phone number ARN. If a UUID is provided in this scenario, you will receive a `ResourceNotFoundException`.
- Only use the phone number ARN format that doesn't contain `instance` in the path, for example, `arn:aws:connect:us-east-1:1234567890:phone-number/uuid`. This is the same ARN format that is returned when you call the ListPhoneNumbersV2 API.
- If you plan to use IAM policies to allow/deny access to this API for phone number resources claimed to a traffic distribution group, see Allow or Deny queue API actions for phone numbers in a replica Region.

Request Syntax

```
POST /queues/InstanceId/QueueId/outbound-caller-config HTTP/1.1
Content-type: application/json

{
   "OutboundCallerConfig": {
      "OutboundCallerIdName": "string",
      "OutboundCallerIdNumberId": "string",
      "OutboundFlowId": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

OutboundCallerConfig

The outbound caller ID name, number, and outbound whisper flow.

Type: OutboundCallerConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueOutboundEmailConfig

Service: Amazon Connect Service

Updates the outbound email address Id for a specified queue.

Request Syntax

```
POST /queues/InstanceId/QueueId/outbound-email-config HTTP/1.1
Content-type: application/json

{
   "OutboundEmailConfig": {
      "OutboundEmailAddressId": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

OutboundEmailConfig

The outbound email address ID for a specified queue.

Type: OutboundEmailConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQueueStatus

Service: Amazon Connect Service

Updates the status of the queue.

Request Syntax

```
POST /queues/InstanceId/QueueId/status HTTP/1.1
Content-type: application/json

{
   "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QueueId

The identifier for the queue.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Status

The status of the queue.

Type: String

Valid Values: `ENABLED | DISABLED`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQuickConnectConfig

Service: Amazon Connect Service

Updates the configuration settings for the specified quick connect.

Request Syntax

```
POST /quick-connects/InstanceId/QuickConnectId/config HTTP/1.1
Content-type: application/json

{
   "QuickConnectConfig": {
      "FlowConfig": {
         "ContactFlowId": "string"
      },
      "PhoneConfig": {
         "PhoneNumber": "string"
      },
      "QueueConfig": {
         "ContactFlowId": "string",
         "QueueId": "string"
      },
      "QuickConnectType": "string",
      "UserConfig": {
         "ContactFlowId": "string",
         "UserId": "string"
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QuickConnectId

The identifier for the quick connect.

Required: Yes

Request Body

The request accepts the following data in JSON format.

QuickConnectConfig

Information about the configuration settings for the quick connect.

Type: QuickConnectConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateQuickConnectName

Service: Amazon Connect Service

Updates the name and description of a quick connect. The request accepts the following data in JSON format. At least `Name` or `Description` must be provided.

Request Syntax

```
POST /quick-connects/InstanceId/QuickConnectId/name HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

QuickConnectId

The identifier for the quick connect.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the quick connect.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 250.

Required: No

Name

The name of the quick connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRoutingProfileAgentAvailabilityTimer

Service: Amazon Connect Service

Whether agents with this routing profile will have their routing order calculated based on *time since their last inbound contact* or *longest idle time*.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/agent-availability-timer HTTP/1.1
Content-type: application/json

{
   "AgentAvailabilityTimer": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AgentAvailabilityTimer

Whether agents with this routing profile will have their routing order calculated based on *time since their last inbound contact* or *longest idle time*.

Type: String

Valid Values: `TIME_SINCE_LAST_ACTIVITY | TIME_SINCE_LAST_INBOUND`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRoutingProfileConcurrency

Service: Amazon Connect Service

Updates the channels that agents can handle in the Contact Control Panel (CCP) for a routing profile.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/concurrency HTTP/1.1
Content-type: application/json

{
   "MediaConcurrencies": [
      {
         "Channel": "string",
         "Concurrency": number,
         "CrossChannelBehavior": {
            "BehaviorType": "string"
         }
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

MediaConcurrencies

The channels that agents can handle in the Contact Control Panel (CCP).

Type: Array of MediaConcurrency objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRoutingProfileDefaultOutboundQueue

Service: Amazon Connect Service

Updates the default outbound queue of a routing profile.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/default-outbound-queue HTTP/1.1
Content-type: application/json

{
   "DefaultOutboundQueueId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

DefaultOutboundQueueId

The identifier for the default outbound queue.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRoutingProfileName

Service: Amazon Connect Service

Updates the name and description of a routing profile. The request accepts the following data in JSON format. At least `Name` or `Description` must be provided.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/name HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the routing profile. Must not be more than 250 characters.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 250.

Required: No

Name

The name of the routing profile. Must not be more than 127 characters.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRoutingProfileQueues

Service: Amazon Connect Service

Updates the properties associated with a set of queues for a routing profile.

Request Syntax

```
POST /routing-profiles/InstanceId/RoutingProfileId/queues HTTP/1.1
Content-type: application/json

{
   "QueueConfigs": [
      {
         "Delay": number,
         "Priority": number,
         "QueueReference": {
            "Channel": "string",
            "QueueId": "string"
         }
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RoutingProfileId

The identifier of the routing profile.

Required: Yes

Request Body

The request accepts the following data in JSON format.

QueueConfigs

The queues to be updated for this routing profile. Queues must first be associated to the routing profile. You can do this using AssociateRoutingProfileQueues.

Type: Array of RoutingProfileQueueConfig objects

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateRule

Service: Amazon Connect Service

Updates a rule for the specified Amazon Connect instance.

Use the Rules Function language to code conditions for the rule.

Request Syntax

```
PUT /rules/InstanceId/RuleId HTTP/1.1
Content-type: application/json

{
   "Actions": [
      {
         "ActionType": "string",
         "AssignContactCategoryAction": {
         },
         "AssignSlaAction": {
            "CaseSlaConfiguration": {
               "FieldId": "string",
               "Name": "string",
               "TargetFieldValues": [
                  {
                     "BooleanValue": boolean,
                     "DoubleValue": number,
                     "EmptyValue": {
                     },
                     "StringValue": "string"
                  }
               ],
               "TargetSlaMinutes": number,
               "Type": "string"
            },
            "SlaAssignmentType": "string"

         ]
      }
   }
],
"Function": "string",
"Name": "string",
"PublishStatus": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

RuleId

A unique identifier for the rule.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Actions

A list of actions to be run when the rule is triggered.

Type: Array of RuleAction objects

Required: Yes

Function

The conditions of the rule.

Type: String

Required: Yes

Name

The name of the rule. You can change the name only if `TriggerEventSource` is one of the following values: `OnZendeskTicketCreate` | `OnZendeskTicketStatusUpdate` | `OnSalesforceCaseCreate`

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Pattern: `^[0-9a-zA-Z._-]+`

Required: Yes

PublishStatus

The publish status of the rule.

Type: String

Valid Values: `DRAFT | PUBLISHED`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateSecurityProfile

Service: Amazon Connect Service

Updates a security profile.

For information about security profiles, see Security Profiles in the *Amazon Connect Administrator Guide*. For a mapping of the API name and user interface name of the security profile permissions, see List of security profile permissions.

Request Syntax

```
POST /security-profiles/InstanceId/SecurityProfileId HTTP/1.1
Content-type: application/json

{
   "AllowedAccessControlHierarchyGroupId": "string",
   "AllowedAccessControlTags": {
      "string" : "string"
   },
   "AllowedFlowModules": [
      {
         "FlowModuleId": "string",
         "Type": "string"
      }
   ],
   "Applications": [
      {
         "ApplicationPermissions": [ "string" ],
         "Namespace": "string",
         "Type": "string"
      }
   ],
   "Description": "string",
   "GranularAccessControlConfiguration": {
      "DataTableAccessControlConfiguration": {
         "PrimaryAttributeAccessControlConfiguration": {
            "PrimaryAttributeValues": [
               {
                  "AccessType": "string",
                  "AttributeName": "string",
                  "Values": [ "string" ]
               }
            ]
```

```
            }
         }
      },
      "HierarchyRestrictedResources": [ "string" ],
      "Permissions": [ "string" ],
      "TagRestrictedResources": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

SecurityProfileId

The identifier for the security profle.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AllowedAccessControlHierarchyGroupId

The identifier of the hierarchy group that a security profile uses to restrict access to resources in Amazon Connect.

Type: String

Required: No

AllowedAccessControlTags

The list of tags that a security profile uses to restrict access to resources in Amazon Connect.

Type: String to string map

Map Entries: Maximum number of 4 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Value Length Constraints: Maximum length of 256.

Required: No

AllowedFlowModules

A list of Flow Modules an AI Agent can invoke as a tool

Type: Array of FlowModule objects

Array Members: Maximum number of 10 items.

Required: No

Applications

A list of the third-party application's metadata.

Type: Array of Application objects

Array Members: Maximum number of 10 items.

Required: No

Description

The description of the security profile.

Type: String

Length Constraints: Maximum length of 250.

Required: No

GranularAccessControlConfiguration

The granular access control configuration for the security profile, including data table permissions.

Type: GranularAccessControlConfiguration object

Required: No

HierarchyRestrictedResources

The list of resources that a security profile applies hierarchy restrictions to in Amazon Connect. Following are acceptable ResourceNames: `User`.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

Permissions

The permissions granted to a security profile. For a list of valid permissions, see List of security profile permissions.

Type: Array of strings

Array Members: Maximum number of 500 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

TagRestrictedResources

The list of resources that a security profile applies tag restrictions to in Amazon Connect.

Type: Array of strings

Array Members: Maximum number of 10 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateTaskTemplate

Service: Amazon Connect Service

Updates details about a specific task template in the specified Amazon Connect instance. This operation does not support partial updates. Instead it does a full update of template content.

Request Syntax

```
POST /instance/InstanceId/task/template/TaskTemplateId HTTP/1.1
Content-type: application/json

{
   "Constraints": {
      "InvisibleFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ],
      "ReadOnlyFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ],
      "RequiredFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ]
   },
   "ContactFlowId": "string",
   "Defaults": {
      "DefaultFieldValues": [
         {
            "DefaultValue": "string",
            "Id": {
               "Name": "string"
            }
```

```
            }
         ]
      },
      "Description": "string",
      "Fields": [
         {
            "Description": "string",
            "Id": {
               "Name": "string"
            },
            "SingleSelectOptions": [ "string" ],
            "Type": "string"
         }
      ],
      "Name": "string",
      "SelfAssignFlowId": "string",
      "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

TaskTemplateId

A unique identifier for the task template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Constraints

Constraints that are applicable to the fields listed.

Type: TaskTemplateConstraints object

Required: No

ContactFlowId

The identifier of the flow that runs by default when a task is created by referencing this template.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Defaults

The default values for fields when a task is created by referencing this template.

Type: TaskTemplateDefaults object

Required: No

Description

The description of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

Fields

Fields that are part of the template.

Type: Array of TaskTemplateField objects

Required: No

Name

The name of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

SelfAssignFlowId

The ContactFlowId for the flow that will be run if this template is used to create a self-assigned task.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Status

Marks a template as `ACTIVE` or `INACTIVE` for a task to refer to it. Tasks can only be created from `ACTIVE` templates. If a template is marked as `INACTIVE`, then a task that refers to this template cannot be created.

Type: String

Valid Values: `ACTIVE | INACTIVE`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
   "Constraints": {
      "InvisibleFields": [
         {
            "Id": {
               "Name": "string"
            }
         }
      ],
      "ReadOnlyFields": [
```

```
            {
               "Id": {
                  "Name": "string"
               }
            }
         ],
         "RequiredFields": [
            {
               "Id": {
                  "Name": "string"
               }
            }
         ]
      },
      "ContactFlowId": "string",
      "CreatedTime": number,
      "Defaults": {
         "DefaultFieldValues": [
            {
               "DefaultValue": "string",
               "Id": {
                  "Name": "string"
               }
            }
         ]
      },
      "Description": "string",
      "Fields": [
         {
            "Description": "string",
            "Id": {
               "Name": "string"
            },
            "SingleSelectOptions": [ "string" ],
            "Type": "string"
         }
      ],
      "Id": "string",
      "InstanceId": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "SelfAssignFlowId": "string",
      "Status": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) for the task template resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Constraints

Constraints that are applicable to the fields listed.

Type: TaskTemplateConstraints object

ContactFlowId

The identifier of the flow that runs by default when a task is created by referencing this template.

Type: String

Length Constraints: Maximum length of 500.

CreatedTime

The timestamp when the task template was created.

Type: Timestamp

Defaults

The default values for fields when a task is created by referencing this template.

Type: TaskTemplateDefaults object

Description

The description of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Fields

Fields that are part of the template.

Type: Array of TaskTemplateField objects

Id

The identifier of the task template resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

LastModifiedTime

The timestamp when the task template was last modified.

Type: Timestamp

Name

The name of the task template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

SelfAssignFlowId

The ContactFlowId for the flow that will be run if this template is used to create a self-assigned task.

Type: String

Length Constraints: Maximum length of 500.

Status

Marks a template as `ACTIVE` or `INACTIVE` for a task to refer to it. Tasks can only be created from `ACTIVE` templates. If a template is marked as `INACTIVE`, then a task that refers to this template cannot be created.

Type: String

Valid Values: `ACTIVE | INACTIVE`

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

PropertyValidationException

The property is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded.

Reason

The reason for the exception.

HTTP Status Code: 402

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateTestCase

Service: Amazon Connect Service

Updates any of the metadata for a test case, such as the name, description, and status or content of an existing test case. This API doesn't allow customers to update the tags of the test case resource for the specified Amazon Connect instance.

Request Syntax

```
POST /test-cases/InstanceId/TestCaseId HTTP/1.1
x-amz-last-modified-time: LastModifiedTime
x-amz-last-modified-region: LastModifiedRegion
Content-type: application/json

{
   "Content": "string",
   "Description": "string",
   "EntryPoint": {
      "ChatEntryPointParameters": {
         "FlowId": "string"
      },
      "Type": "string",
      "VoiceCallEntryPointParameters": {
         "DestinationPhoneNumber": "string",
         "FlowId": "string",
         "SourcePhoneNumber": "string"
      }
   },
   "InitializationData": "string",
   "Name": "string",
   "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 250.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z]+-[0-9]{1}:[0-9]{1,20}:instance/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

LastModifiedRegion

The region in which the resource was last modified

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The time at which the resource was last modified.

TestCaseId

The identifier of the test case to update.

Length Constraints: Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

The JSON string that represents the content of the test.

Type: String

Required: No

Description

The description of the test case.

Type: String

Required: No

EntryPoint

Defines the starting point for your test.

Type: TestCaseEntryPoint object

Required: No

InitializationData

Defines the test attributes for precise data representation.

Type: String

Required: No

Name

The name of the test case.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Status

Indicates the test status as either SAVED or PUBLISHED. The PUBLISHED status will initiate validation on the content. The SAVED status does not initiate validation of the content.

Type: String

Valid Values: `PUBLISHED | SAVED`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

InvalidTestCaseException

The test is not valid.

Problems

The problems with the test. Please fix before trying again.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateTrafficDistribution

Service: Amazon Connect Service

Updates the traffic distribution for a given traffic distribution group.

> **Important**
>
> When you shift telephony traffic, also shift agents and/or agent sign-ins to ensure they can handle the calls in the other Region. If you don't shift the agents, voice calls will go to the shifted Region but there won't be any agents available to receive the calls.

> **Note**
>
> The `SignInConfig` distribution is available only on a default `TrafficDistributionGroup` (see the `IsDefault` parameter in the TrafficDistributionGroup data type). If you call `UpdateTrafficDistribution` with a modified `SignInConfig` and a non-default `TrafficDistributionGroup`, an `InvalidRequestException` is returned.

For more information about updating a traffic distribution group, see Update telephony traffic distribution across AWS Regions in the *Amazon Connect Administrator Guide*.

Important things to know

- Invoke the UpdateTrafficDistribution API in the region that should handle traffic.

Request Syntax

```
PUT /traffic-distribution/Id HTTP/1.1
Content-type: application/json

{
   "AgentConfig": {
      "Distributions": [
         {
            "Percentage": number,
```

```
            "Region": "string"
         }
      ]
   },
   "SignInConfig": {
      "Distributions": [
         {
            "Enabled": boolean,
            "Region": "string"
         }
      ]
   },
   "TelephonyConfig": {
      "Distributions": [
         {
            "Percentage": number,
            "Region": "string"
         }
      ]
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

Id

The identifier of the traffic distribution group. This can be the ID or the ARN if the API is being called in the Region where the traffic distribution group was created. The ARN must be provided if the call is from the replicated Region.

Pattern: `^(arn:(aws|aws-us-gov):connect:[a-z]{2}-[a-z-]+-[0-9]{1}:[0-9]{1,20}:traffic-distribution-group/)?[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

AgentConfig

The distribution of agents between the instance and its replica(s).

Type: AgentConfig object

Required: No

SignInConfig

The distribution that determines which AWS Regions should be used to sign in agents in to both the instance and its replica(s).

Type: SignInConfig object

Required: No

TelephonyConfig

The distribution of traffic between the instance and its replica(s).

Type: TelephonyConfig object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserConfig

Service: Amazon Connect Service

Updates the configuration settings for the specified user, including per-channel auto-accept and after contact work (ACW) timeout settings.

> **Note**
>
> This operation replaces the UpdateUserPhoneConfig API. While UpdateUserPhoneConfig applies the same ACW timeout to all channels, UpdateUserConfig allows you to set different auto-accept and ACW timeout values for each channel type.

Request Syntax

```
POST /users/InstanceId/UserId/config HTTP/1.1
Content-type: application/json

{
   "AfterContactWorkConfigs": [
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "AgentFirstCallbackAfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "string"
      }
   ],
   "AutoAcceptConfigs": [
      {
         "AgentFirstCallbackAutoAccept": boolean,
         "AutoAccept": boolean,
         "Channel": "string"
      }
   ],
   "PersistentConnectionConfigs": [
      {
         "Channel": "string",
         "PersistentConnection": boolean
      }
```

```
   ],
   "PhoneNumberConfigs": [
      {
         "Channel": "string",
         "PhoneNumber": "string",
         "PhoneType": "string"
      }
   ],
   "VoiceEnhancementConfigs": [
      {
         "Channel": "string",
         "VoiceEnhancementMode": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AfterContactWorkConfigs

The list of after contact work (ACW) timeout configuration settings for each channel. ACW timeout specifies how many seconds agents have for after contact work, such as entering notes

about the contact. The minimum setting is 1 second, and the maximum is 2,000,000 seconds (24 days). Enter 0 for an indefinite amount of time, meaning agents must manually choose to end ACW.

Type: Array of AfterContactWorkConfigPerChannel objects

Required: No

AutoAcceptConfigs

The list of auto-accept configuration settings for each channel. When auto-accept is enabled for a channel, available agents are automatically connected to contacts from that channel without needing to manually accept. Auto-accept connects agents to contacts in less than one second.

Type: Array of AutoAcceptConfig objects

Required: No

PersistentConnectionConfigs

The list of persistent connection configuration settings for each channel.

Type: Array of PersistentConnectionConfig objects

Required: No

PhoneNumberConfigs

The list of phone number configuration settings for each channel.

Type: Array of PhoneNumberConfig objects

Required: No

VoiceEnhancementConfigs

The list of voice enhancement configuration settings for each channel.

Type: Array of VoiceEnhancementConfig objects

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConditionalOperationFailedException

Request processing failed because dependent condition failed.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Request syntax

This example illustrates one usage of UpdateUserConfig.

```
POST /users/{InstanceId}/{UserId}/config HTTP/1.1
Content-type: application/json

{
   "AfterContactWorkConfigs": [
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "CHAT"
      },
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "EMAIL"
      },
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "TASK"
      },
```

```
      {
         "AfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "AgentFirstCallbackAfterContactWorkConfig": {
            "AfterContactWorkTimeLimit": number
         },
         "Channel": "VOICE"
      }
   ],
   "AutoAcceptConfigs": [
      {
         "AutoAccept": boolean,
         "Channel": "CHAT"
      },
      {
         "AutoAccept": boolean,
         "Channel": "EMAIL"
      },
      {
         "AutoAccept": boolean,
         "Channel": "TASK"
      },
      {
         "AgentFirstCallbackAutoAccept": boolean,
         "AutoAccept": boolean,
         "Channel": "VOICE"
      }
   ],
   "PhoneNumberConfigs": [
      {
         "Channel": "VOICE",
         "PhoneNumber": "string",
         "PhoneType": "string"
      }
   ],
   "PersistentConnectionConfigs": [
      {
         "Channel": "VOICE",
         "PersistentConnection": boolean
      }
   ],
   "VoiceEnhancementConfigs": [
      {
```

```
         "Channel": "VOICE",
         "VoiceEnhancementMode": "string"
      }
   ]
}
```

UpdateUserHierarchy

Service: Amazon Connect Service

Assigns the specified hierarchy group to the specified user.

Request Syntax

```
POST /users/InstanceId/UserId/hierarchy HTTP/1.1
Content-type: application/json

{
   "HierarchyGroupId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

HierarchyGroupId

The identifier of the hierarchy group.

Type: String

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserHierarchyGroupName

Service: Amazon Connect Service

Updates the name of the user hierarchy group.

Request Syntax

```
POST /user-hierarchy-groups/InstanceId/HierarchyGroupId/name HTTP/1.1
Content-type: application/json

{
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

HierarchyGroupId

The identifier of the hierarchy group.

Required: Yes

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Name

The name of the hierarchy group. Must not be more than 100 characters.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserHierarchyStructure

Service: Amazon Connect Service

Updates the user hierarchy structure: add, remove, and rename user hierarchy levels.

Request Syntax

```
POST /user-hierarchy-structure/InstanceId HTTP/1.1
Content-type: application/json

{
   "HierarchyStructure": {
      "LevelFive": {
         "Name": "string"
      },
      "LevelFour": {
         "Name": "string"
      },
      "LevelOne": {
         "Name": "string"
      },
      "LevelThree": {
         "Name": "string"
      },
      "LevelTwo": {
         "Name": "string"
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Request Body

The request accepts the following data in JSON format.

HierarchyStructure

The hierarchy levels to update.

Type: HierarchyStructureUpdate object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserIdentityInfo

Service: Amazon Connect Service

Updates the identity information for the specified user.

> **Important**
>
> We strongly recommend limiting who has the ability to invoke `UpdateUserIdentityInfo`. Someone with that ability can change the login credentials of other users by changing their email address. This poses a security risk to your organization. They can change the email address of a user to the attacker's email address, and then reset the password through email. For more information, see Best Practices for Security Profiles in the *Amazon Connect Administrator Guide*.

Request Syntax

```
POST /users/InstanceId/UserId/identity-info HTTP/1.1
Content-type: application/json

{
   "IdentityInfo": {
      "Email": "string",
      "FirstName": "string",
      "LastName": "string",
      "Mobile": "string",
      "SecondaryEmail": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

IdentityInfo

The identity information for the user.

Type: UserIdentityInfo object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserNotificationStatus

Service: Amazon Connect Service

Updates the status of a notification for a specific user, such as marking it as read or hidden. Users can only update notification status for notifications that have been sent to them. READ status deprioritizes the notification and greys it out, while HIDDEN status removes it from the notification widget.

Request Syntax

```
POST /users/InstanceId/UserId/notifications/NotificationId HTTP/1.1
x-amz-last-modified-time: LastModifiedTime
x-amz-last-modified-region: LastModifiedRegion
Content-type: application/json

{
   "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

LastModifiedRegion

The AWS Region where the notification status was last modified. Used for cross-region replication.

Pattern: `[a-z]{2}(-[a-z]+){1,2}(-[0-9])?`

LastModifiedTime

The timestamp when the notification status was last modified. Used for cross-region replication and optimistic locking.

NotificationId

The unique identifier for the notification.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

UserId

The identifier of the user whose notification status is being updated.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Status

The new status for the notification. Valid values are READ, UNREAD, and HIDDEN.

Type: String

Valid Values: `READ | UNREAD | HIDDEN`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserPhoneConfig

Service: Amazon Connect Service

Updates the phone configuration settings for the specified user.

> **Note**
>
> We recommend using the UpdateUserConfig API, which supports additional functionality that is not available in the UpdateUserPhoneConfig API, such as voice enhancement settings and per-channel configuration for auto-accept and After Contact Work (ACW) timeouts. In comparison, the UpdateUserPhoneConfig API will always set the same ACW timeouts to all channels the user handles.

Request Syntax

```
POST /users/InstanceId/UserId/phone-config HTTP/1.1
Content-type: application/json

{
   "PhoneConfig": {
      "AfterContactWorkTimeLimit": number,
      "AutoAccept": boolean,
      "DeskPhoneNumber": "string",
      "PersistentConnection": boolean,
      "PhoneType": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

PhoneConfig

Information about phone configuration settings for the user.

Type: UserPhoneConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserProficiencies

Service: Amazon Connect Service

Updates the properties associated with the proficiencies of a user.

Request Syntax

```
POST /users/InstanceId/UserId/proficiencies HTTP/1.1
Content-type: application/json

{
   "UserProficiencies": [
      {
         "AttributeName": "string",
         "AttributeValue": "string",
         "Level": number
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

UserProficiencies

The proficiencies to be updated for the user. Proficiencies must first be associated to the user. You can do this using AssociateUserProficiencies API.

Type: Array of UserProficiency objects

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserRoutingProfile

Service: Amazon Connect Service

Assigns the specified routing profile to the specified user.

Request Syntax

```
POST /users/InstanceId/UserId/routing-profile HTTP/1.1
Content-type: application/json

{
   "RoutingProfileId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

RoutingProfileId

The identifier of the routing profile for the user.

Type: String

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserSecurityProfiles

Service: Amazon Connect Service

Assigns the specified security profiles to the specified user.

Request Syntax

```
POST /users/InstanceId/UserId/security-profiles HTTP/1.1
Content-type: application/json

{
   "SecurityProfileIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

UserId

The identifier of the user account.

Required: Yes

Request Body

The request accepts the following data in JSON format.

SecurityProfileIds

The identifiers of the security profiles for the user.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 10 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateViewContent

Service: Amazon Connect Service

Updates the view content of the given view identifier in the specified Amazon Connect instance.

It performs content validation if `Status` is set to SAVED and performs full content validation if `Status` is PUBLISHED. Note that the $SAVED alias' content will always be updated, but the $LATEST alias' content will only be updated if `Status` is PUBLISHED.

Request Syntax

```
POST /views/InstanceId/ViewId HTTP/1.1
Content-type: application/json

{
   "Content": {
      "Actions": [ "string" ],
      "Template": "string"
   },
   "Status": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

Content

View content containing all content necessary to render a view except for runtime input data and the runtime input schema, which is auto-generated by this operation.

The total uncompressed content has a maximum file size of 400kB.

Type: ViewInputContent object

Required: Yes

Status

Indicates the view status as either `SAVED` or `PUBLISHED`. The `PUBLISHED` status will initiate validation on the content.

Type: String

Valid Values: `PUBLISHED | SAVED`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "View": {
      "Arn": "string",
      "Content": {
         "Actions": [ "string" ],
         "InputSchema": "string",
```

```
         "Template": "string"
      },
      "CreatedTime": number,
      "Description": "string",
      "Id": "string",
      "LastModifiedTime": number,
      "Name": "string",
      "Status": "string",
      "Tags": {
         "string" : "string"
      },
      "Type": "string",
      "Version": number,
      "VersionDescription": "string",
      "ViewContentSha256": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

View

A view resource object. Contains metadata and content necessary to render the view.

Type: View object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

UpdateViewMetadata

Service: Amazon Connect Service

Updates the view metadata. Note that either `Name` or `Description` must be provided.

Request Syntax

```
POST /views/InstanceId/ViewId/metadata HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `^[a-zA-Z0-9\_\-:\/]+$`

Required: Yes

ViewId

The identifier of the view. Both `ViewArn` and `ViewId` can be used.

Length Constraints: Minimum length of 1. Maximum length of 500.

Pattern: `^[a-zA-Z0-9\_\-:\/$]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the view.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4096.

Pattern: `^([\p{L}\p{N}_.:\/=+\-@,()']+[\p{L}\p{Z}\p{N}_.:\/=+\-@,()']*)$`

Required: No

Name

The name of the view.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^([\p{L}\p{N}_.:\/=+\-@()']+[\p{L}\p{Z}\p{N}_.:\/=+\-@()']*)$`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceInUseException

That resource is already in use (for example, you're trying to add a record with the same name as an existing record). If you are trying to delete a resource (for example, DeleteHoursOfOperation or DeletePredefinedAttribute), remove its reference from related resources and then try again.

ResourceId

The identifier for the resource.

ResourceType

The type of resource.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

TooManyRequestsException

Displayed when rate-related API limits are exceeded.

HTTP Status Code: 429

UpdateWorkspaceMetadata

Service: Amazon Connect Service

Updates the metadata of a workspace, such as its name and description.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/metadata HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string",
   "Title": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the workspace.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Pattern: `^[\\P{C}\r\n\t]*$`

Required: No

Name

The name of the workspace.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Pattern: `.*\\S.*`

Required: No

Title

The title displayed for the workspace.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 127.

Pattern: `^[\\P{C}]*$`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateWorkspacePage

Service: Amazon Connect Service

Updates the configuration of a page in a workspace, including the associated view and input data.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/pages/Page HTTP/1.1
Content-type: application/json

{
   "InputData": "string",
   "NewPage": "string",
   "ResourceArn": "string",
   "Slug": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Page

The current page identifier.

Length Constraints: Minimum length of 1. Maximum length of 25.

Pattern: `^(?!\\.$)(?!\\.\\.$)[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]+$`

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

InputData

A JSON string containing input parameters for the view.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: No

NewPage

The new page identifier, if changing the page name.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 25.

Pattern: `^(?!\\.$)(?!\\.\\.$)[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]+$`

Required: No

ResourceArn

The Amazon Resource Name (ARN) of the view to associate with the page.

Type: String

Required: No

Slug

The URL-friendly identifier for the page.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^$|^[\\p{L}\\p{Z}\\p{N}\\-_.:=@'|]{3,}$`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceConflictException

A resource already has that name.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateWorkspaceTheme

Service: Amazon Connect Service

Updates the theme configuration for a workspace, including colors and styling.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/theme HTTP/1.1
Content-type: application/json

{
   "Theme": {
      "Dark": {
         "Images": {
            "Logo": {
               "Default": "string",
               "Favicon": "string"
            }
         },
         "Palette": {
            "Canvas": {
               "ActiveBackground": "string",
               "ContainerBackground": "string",
               "PageBackground": "string"
            },
            "Header": {
               "Background": "string",
               "InvertActionsColors": boolean,
               "Text": "string",
               "TextHover": "string"
            },
            "Navigation": {
               "Background": "string",
               "InvertActionsColors": boolean,
               "Text": "string",
               "TextActive": "string",
               "TextBackgroundActive": "string",
               "TextBackgroundHover": "string",
               "TextHover": "string"
            },
            "Primary": {
               "Active": "string",
               "ContrastText": "string",
```

```
            "Default": "string"
         }
      },
      "Typography": {
         "FontFamily": {
            "Default": "string"
         }
      }
   },
   "Light": {
      "Images": {
         "Logo": {
            "Default": "string",
            "Favicon": "string"
         }
      },
      "Palette": {
         "Canvas": {
            "ActiveBackground": "string",
            "ContainerBackground": "string",
            "PageBackground": "string"
         },
         "Header": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextHover": "string"
         },
         "Navigation": {
            "Background": "string",
            "InvertActionsColors": boolean,
            "Text": "string",
            "TextActive": "string",
            "TextBackgroundActive": "string",
            "TextBackgroundHover": "string",
            "TextHover": "string"
         },
         "Primary": {
            "Active": "string",
            "ContrastText": "string",
            "Default": "string"
         }
      },
      "Typography": {
```

```
            "FontFamily": {
               "Default": "string"
            }
         }
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Theme

The theme configuration, including color schemes and visual styles.

Type: WorkspaceTheme object

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateWorkspaceVisibility

Service: Amazon Connect Service

Updates the visibility setting of a workspace, controlling whether it is available to all users, assigned users only, or none.

Request Syntax

```
POST /workspaces/InstanceId/WorkspaceId/visibility HTTP/1.1
Content-type: application/json

{
   "Visibility": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

InstanceId

The identifier of the Amazon Connect instance. You can find the instance ID in the Amazon Resource Name (ARN) of the instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

WorkspaceId

The identifier of the workspace.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

Request Body

The request accepts the following data in JSON format.

Visibility

The visibility setting for the workspace. Valid values are: `ALL` (available to all users), `ASSIGNED` (available only to assigned users and routing profiles), and `NONE` (not visible to any users).

Type: String

Valid Values: `ALL | ASSIGNED | NONE`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient permissions to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed because of an error or failure with the service.

Message

The message.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

Message

The message about the parameters.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

Message

The message about the request.

Reason

Reason why the request was invalid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

Message

The message about the resource.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Amazon AppIntegrations Service

The following actions are supported by Amazon AppIntegrations Service:

- CreateApplication
- CreateDataIntegration
- CreateDataIntegrationAssociation
- CreateEventIntegration
- DeleteApplication
- DeleteDataIntegration
- DeleteEventIntegration
- GetApplication
- GetDataIntegration
- GetEventIntegration
- ListApplicationAssociations
- ListApplications
- ListDataIntegrationAssociations
- ListDataIntegrations
- ListEventIntegrationAssociations
- ListEventIntegrations
- ListTagsForResource
- TagResource
- UntagResource
- UpdateApplication

- UpdateDataIntegration
- UpdateDataIntegrationAssociation
- UpdateEventIntegration

CreateApplication

Service: Amazon AppIntegrations Service

Creates and persists an Application resource.

Request Syntax

```
POST /applications HTTP/1.1
Content-type: application/json

{
   "ApplicationConfig": {
      "ContactHandling": {
         "Scope": "string"
      }
   },
   "ApplicationSourceConfig": {
      "ExternalUrlConfig": {
         "AccessUrl": "string",
         "ApprovedOrigins": [ "string" ]
      }
   },
   "ApplicationType": "string",
   "ClientToken": "string",
   "Description": "string",
   "IframeConfig": {
      "Allow": [ "string" ],
      "Sandbox": [ "string" ]
   },
   "InitializationTimeout": number,
   "IsService": boolean,
   "Name": "string",
   "Namespace": "string",
   "Permissions": [ "string" ],
   "Publications": [
      {
         "Description": "string",
         "Event": "string",
         "Schema": "string"
      }
   ],
   "Subscriptions": [
      {
```

```
            "Description": "string",
            "Event": "string"
        }
    ],
    "Tags": {
        "string" : "string"
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ApplicationConfig

The configuration settings for the application.

Type: ApplicationConfig object

Required: No

ApplicationSourceConfig

The configuration for where the application should be loaded from.

Type: ApplicationSourceConfig object

Required: Yes

ApplicationType

The type of application.

Type: String

Valid Values: `STANDARD | SERVICE | MCP_SERVER`

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `.*`

Required: No

Description

The description of the application.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

IframeConfig

The iframe configuration for the application.

Type: IframeConfig object

Required: No

InitializationTimeout

The maximum time in milliseconds allowed to establish a connection with the workspace.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 600000.

Required: No

IsService

This parameter has been deprecated.

Indicates whether the application is a service.

Type: Boolean

Required: No

Name

The name of the application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._ \-]+$`

Required: Yes

Namespace

The namespace of the application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 211.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

Permissions

The configuration of events or requests that the application has access to.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 150 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-\*]+$`

Required: No

Publications

This parameter has been deprecated.

The events that the application publishes.

Type: Array of Publication objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

Subscriptions

This parameter has been deprecated.

The events that the application subscribes.

Type: Array of Subscription objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
```

```
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) of the Application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Id

A unique identifier for the Application.

Type: String

Pattern: `[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceQuotaExceededException

The allowed quota for the resource has been exceeded.

HTTP Status Code: 429

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UnsupportedOperationException

The operation is not supported.

HTTP Status Code: 400

CreateDataIntegration

Service: Amazon AppIntegrations Service

Creates and persists a DataIntegration resource.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the `CreateDataIntegration` API.

Request Syntax

```
POST /dataIntegrations HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Description": "string",
   "FileConfiguration": {
      "Filters": {
         "string" : [ "string" ]
      },
      "Folders": [ "string" ]
   },
   "KmsKey": "string",
   "Name": "string",
   "ObjectConfiguration": {
      "string" : {
         "string" : [ "string" ]
      }
   },
   "ScheduleConfig": {
      "FirstExecutionFrom": "string",
      "Object": "string",
      "ScheduleExpression": "string"
   },
   "SourceURI": "string",
   "Tags": {
      "string" : "string"
   }
```

```
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `.*`

Required: No

Description

A description of the DataIntegration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

FileConfiguration

The configuration for what files should be pulled from the source.

Type: FileConfiguration object

Required: No

KmsKey

The KMS key ARN for the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Name

The name of the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

ObjectConfiguration

The configuration for what data should be pulled from the source.

Type: String to string to array of strings map map

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Array Members: Minimum number of 1 item. Maximum number of 2048 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: No

ScheduleConfig

The name of the data and how often it should be pulled from the source.

Type: ScheduleConfiguration object

Required: No

SourceURI

The URI of the data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `^(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+$)|(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+[\w/!@#+=.-]+[\w/!@#+=.,-]+$)`

Required: No

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Arn": "string",
```

```
   "ClientToken": "string",
   "Description": "string",
   "FileConfiguration": {
      "Filters": {
         "string" : [ "string" ]
      },
      "Folders": [ "string" ]
   },
   "Id": "string",
   "KmsKey": "string",
   "Name": "string",
   "ObjectConfiguration": {
      "string" : {
         "string" : [ "string" ]
      }
   },
   "ScheduleConfiguration": {
      "FirstExecutionFrom": "string",
      "Object": "string",
      "ScheduleExpression": "string"
   },
   "SourceURI": "string",
   "Tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN)

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `.*`

Description

A description of the DataIntegration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

FileConfiguration

The configuration for what files should be pulled from the source.

Type: FileConfiguration object

Id

A unique identifier.

Type: String

Pattern: `[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}`

KmsKey

The KMS key ARN for the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Name

The name of the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

ObjectConfiguration

The configuration for what data should be pulled from the source.

Type: String to string to array of strings map map

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Array Members: Minimum number of 1 item. Maximum number of 2048 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

ScheduleConfiguration

The name of the data and how often it should be pulled from the source.

Type: ScheduleConfiguration object

SourceURI

The URI of the data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `^(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+$)|(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+[\w/!@#+=.-]+[\w/!@#+=.,-]+$)`

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceQuotaExceededException

The allowed quota for the resource has been exceeded.

HTTP Status Code: 429

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateDataIntegrationAssociation

Service: Amazon AppIntegrations Service

Creates and persists a DataIntegrationAssociation resource.

Request Syntax

```
POST /dataIntegrations/Identifier/associations HTTP/1.1
Content-type: application/json

{
   "ClientAssociationMetadata": {
      "string" : "string"
   },
   "ClientId": "string",
   "ClientToken": "string",
   "DestinationURI": "string",
   "ExecutionConfiguration": {
      "ExecutionMode": "string",
      "OnDemandConfiguration": {
         "EndTime": "string",
         "StartTime": "string"
      },
      "ScheduleConfiguration": {
         "FirstExecutionFrom": "string",
         "Object": "string",
         "ScheduleExpression": "string"
      }
   },
   "ObjectConfiguration": {
      "string" : {
         "string" : [ "string" ]
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

Identifier

A unique identifier for the DataIntegration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientAssociationMetadata

The mapping of metadata to be extracted from the data.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Value Length Constraints: Minimum length of 1. Maximum length of 255.

Value Pattern: `.*\S.*`

Required: No

ClientId

The identifier for the client that is associated with the DataIntegration association.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*`

Required: No

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `.*`

Required: No

DestinationURI

The URI of the data destination.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `^(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+$)|(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+[\w/!@#+=.-]+[\w/!@#+=.,-]+$)`

Required: No

ExecutionConfiguration

The configuration for how the files should be pulled from the source.

Type: ExecutionConfiguration object

Required: No

ObjectConfiguration

The configuration for what data should be pulled from the source.

Type: String to string to array of strings map map

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Array Members: Minimum number of 1 item. Maximum number of 2048 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: ^[a-zA-Z0-9\/\._\-]+$

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "DataIntegrationArn": "string",
   "DataIntegrationAssociationId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataIntegrationArn

The Amazon Resource Name (ARN) for the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$

DataIntegrationAssociationId

A unique identifier. for the DataIntegrationAssociation.

Type: String

Pattern: [a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ResourceQuotaExceededException

The allowed quota for the resource has been exceeded.

HTTP Status Code: 429

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

CreateEventIntegration

Service: Amazon AppIntegrations Service

Creates an EventIntegration, given a specified name, description, and a reference to an Amazon EventBridge bus in your account and a partner event source that pushes events to that bus. No objects are created in the your account, only metadata that is persisted on the EventIntegration control plane.

Request Syntax

```
POST /eventIntegrations HTTP/1.1
Content-type: application/json

{
   "ClientToken": "string",
   "Description": "string",
   "EventBridgeBus": "string",
   "EventFilter": {
      "Source": "string"
   },
   "Name": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `.*`

Required: No

Description

The description of the event integration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

EventBridgeBus

The EventBridge bus.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

EventFilter

The event filter.

Type: EventFilter object

Required: Yes

Name

The name of the event integration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EventIntegrationArn": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EventIntegrationArn

The Amazon Resource Name (ARN) of the event integration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceQuotaExceededException

The allowed quota for the resource has been exceeded.

HTTP Status Code: 429

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteApplication

Service: Amazon AppIntegrations Service

Deletes the Application. Only Applications that don't have any Application Associations can be deleted.

Request Syntax

```
DELETE /applications/ApplicationIdentifier HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ApplicationIdentifier

The Amazon Resource Name (ARN) of the Application.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^(arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}|[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12})(:[\w\$]+)?$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteDataIntegration

Service: Amazon AppIntegrations Service

Deletes the DataIntegration. Only DataIntegrations that don't have any DataIntegrationAssociations can be deleted. Deleting a DataIntegration also deletes the underlying Amazon AppFlow flow and service linked role.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the CreateDataIntegration API.

Request Syntax

```
DELETE /dataIntegrations/Identifier HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Identifier

A unique identifier for the DataIntegration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DeleteEventIntegration

Service: Amazon AppIntegrations Service

Deletes the specified existing event integration. If the event integration is associated with clients, the request is rejected.

Request Syntax

```
DELETE /eventIntegrations/Name HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Name

The name of the event integration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

GetApplication

Service: Amazon AppIntegrations Service

Get an Application resource.

Request Syntax

```
GET /applications/ApplicationIdentifier HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ApplicationIdentifier

The Amazon Resource Name (ARN) of the Application.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^(arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}|[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12})(:[\w\$]+)?$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApplicationConfig": {
      "ContactHandling": {
         "Scope": "string"
      }
   },
```

```
   "ApplicationSourceConfig": {
      "ExternalUrlConfig": {
         "AccessUrl": "string",
         "ApprovedOrigins": [ "string" ]
      }
   },
   "ApplicationType": "string",
   "Arn": "string",
   "CreatedTime": number,
   "Description": "string",
   "Id": "string",
   "IframeConfig": {
      "Allow": [ "string" ],
      "Sandbox": [ "string" ]
   },
   "InitializationTimeout": number,
   "IsService": boolean,
   "LastModifiedTime": number,
   "Name": "string",
   "Namespace": "string",
   "Permissions": [ "string" ],
   "Publications": [
      {
         "Description": "string",
         "Event": "string",
         "Schema": "string"
      }
   ],
   "Subscriptions": [
      {
         "Description": "string",
         "Event": "string"
      }
   ],
   "Tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApplicationConfig

The configuration settings for the application.

Type: ApplicationConfig object

ApplicationSourceConfig

The configuration for where the application should be loaded from.

Type: ApplicationSourceConfig object

ApplicationType

The type of application.

Type: String

Valid Values: `STANDARD | SERVICE | MCP_SERVER`

Arn

The Amazon Resource Name (ARN) of the Application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

CreatedTime

The created time of the Application.

Type: Timestamp

Description

The description of the application.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Id

A unique identifier for the Application.

Type: String

Pattern: `[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}`

IframeConfig

The iframe configuration for the application.

Type: IframeConfig object

InitializationTimeout

The maximum time in milliseconds allowed to establish a connection with the workspace.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 600000.

IsService

This parameter has been deprecated.

Indicates whether the application is a service.

Type: Boolean

LastModifiedTime

The last modified time of the Application.

Type: Timestamp

Name

The name of the application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._ \-]+$`

Namespace

The namespace of the application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 211.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Permissions

The configuration of events or requests that the application has access to.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 150 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-\*]+$`

Publications

This parameter has been deprecated.

The events that the application publishes.

Type: Array of Publication objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Subscriptions

This parameter has been deprecated.

The events that the application subscribes.

Type: Array of Subscription objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetDataIntegration

Service: Amazon AppIntegrations Service

Returns information about the DataIntegration.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the CreateDataIntegration API.

Request Syntax

```
GET /dataIntegrations/Identifier HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Identifier

A unique identifier.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
```

```
   "Arn": "string",
   "Description": "string",
   "FileConfiguration": {
      "Filters": {
         "string" : [ "string" ]
      },
      "Folders": [ "string" ]
   },
   "Id": "string",
   "KmsKey": "string",
   "Name": "string",
   "ObjectConfiguration": {
      "string" : {
         "string" : [ "string" ]
      }
   },
   "ScheduleConfiguration": {
      "FirstExecutionFrom": "string",
      "Object": "string",
      "ScheduleExpression": "string"
   },
   "SourceURI": "string",
   "Tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Arn

The Amazon Resource Name (ARN) for the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Description

The KMS key ARN for the DataIntegration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

FileConfiguration

The configuration for what files should be pulled from the source.

Type: FileConfiguration object

Id

A unique identifier.

Type: String

Pattern: `[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12}`

KmsKey

The KMS key ARN for the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Name

The name of the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

ObjectConfiguration

The configuration for what data should be pulled from the source.

Type: String to string to array of strings map map

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Key Length Constraints: Minimum length of 1. Maximum length of 255.

Key Pattern: `.*\S.*`

Array Members: Minimum number of 1 item. Maximum number of 2048 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

ScheduleConfiguration

The name of the data and how often it should be pulled from the source.

Type: ScheduleConfiguration object

SourceURI

The URI of the data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `^(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+$)|(\w+\:\/\/[\w.-]+[\w/!@#+=.-]+[\w/!@#+=.-]+[\w/!@#+=.,-]+$)`

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetEventIntegration

Service: Amazon AppIntegrations Service

Returns information about the event integration.

Request Syntax

```
GET /eventIntegrations/Name HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Name

The name of the event integration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Description": "string",
   "EventBridgeBus": "string",
   "EventFilter": {
      "Source": "string"
   },
   "EventIntegrationArn": "string",
   "Name": "string",
   "Tags": {
```

```
        "string" : "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Description

The description of the event integration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

EventBridgeBus

The EventBridge bus.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

EventFilter

The event filter.

Type: EventFilter object

EventIntegrationArn

The Amazon Resource Name (ARN) for the event integration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Name

The name of the event integration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListApplicationAssociations

Service: Amazon AppIntegrations Service

Returns a paginated list of application associations for an application.

Request Syntax

```
GET /applications/ApplicationIdentifier/associations?
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ApplicationIdentifier

A unique identifier for the Application.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^(arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}|[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12})(:[\w\$]+)?$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ApplicationAssociations": [
      {
         "ApplicationArn": "string",
         "ApplicationAssociationArn": "string",
         "ClientId": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ApplicationAssociations

List of Application Associations for the Application.

Type: Array of ApplicationAssociationSummary objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListApplications

Service: Amazon AppIntegrations Service

Lists applications in the account.

Request Syntax

```
GET /applications?
applicationType=ApplicationType&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

ApplicationType

The type of application.

Valid Values: `STANDARD | SERVICE | MCP_SERVER`

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "Applications": [
      {
         "ApplicationType": "string",
         "Arn": "string",
         "CreatedTime": number,
         "Id": "string",
         "IsService": boolean,
         "LastModifiedTime": number,
         "Name": "string",
         "Namespace": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Applications

The Applications associated with this account.

Type: Array of ApplicationSummary objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListDataIntegrationAssociations

Service: Amazon AppIntegrations Service

Returns a paginated list of DataIntegration associations in the account.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the CreateDataIntegration API.

Request Syntax

```
GET /dataIntegrations/Identifier/associations?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Identifier

A unique identifier for the DataIntegration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "DataIntegrationAssociations": [
      {
         "ClientId": "string",
         "DataIntegrationArn": "string",
         "DataIntegrationAssociationArn": "string",
         "DestinationURI": "string",
         "ExecutionConfiguration": {
            "ExecutionMode": "string",
            "OnDemandConfiguration": {
               "EndTime": "string",
               "StartTime": "string"
            },
            "ScheduleConfiguration": {
               "FirstExecutionFrom": "string",
               "Object": "string",
               "ScheduleExpression": "string"
            }
         },
         "LastExecutionStatus": {
            "ExecutionStatus": "string",
            "StatusMessage": "string"
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataIntegrationAssociations

The Amazon Resource Name (ARN) and unique ID of the DataIntegration association.

Type: Array of DataIntegrationAssociationSummary objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListDataIntegrations

Service: Amazon AppIntegrations Service

Returns a paginated list of DataIntegrations in the account.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the CreateDataIntegration API.

Request Syntax

```
GET /dataIntegrations?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "DataIntegrations": [
      {
         "Arn": "string",
         "Name": "string",
         "SourceURI": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DataIntegrations

The DataIntegrations associated with this account.

Type: Array of DataIntegrationSummary objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListEventIntegrationAssociations

Service: Amazon AppIntegrations Service

Returns a paginated list of event integration associations in the account.

Request Syntax

```
GET /eventIntegrations/Name/associations?maxResults=MaxResults&nextToken=NextToken
 HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

Name

The name of the event integration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EventIntegrationAssociations": [
      {
         "ClientAssociationMetadata": {
            "string" : "string"
         },
         "ClientId": "string",
         "EventBridgeRuleName": "string",
         "EventIntegrationAssociationArn": "string",
         "EventIntegrationAssociationId": "string",
         "EventIntegrationName": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EventIntegrationAssociations

The event integration associations.

Type: Array of EventIntegrationAssociation objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListEventIntegrations

Service: Amazon AppIntegrations Service

Returns a paginated list of event integrations in the account.

Request Syntax

```
GET /eventIntegrations?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

MaxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "EventIntegrations": [
      {
         "Description": "string",
         "EventBridgeBus": "string",
```

```
         "EventFilter": {
            "Source": "string"
         },
         "EventIntegrationArn": "string",
         "Name": "string",
         "Tags": {
            "string" : "string"
         }
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

EventIntegrations

The event integrations.

Type: Array of EventIntegration objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

NextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Pattern: `.*`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTagsForResource

Service: Amazon AppIntegrations Service

Lists the tags for the specified resource.

Request Syntax

```
GET /tags/resourceArn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The Amazon Resource Name (ARN) of the resource.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags

Information about the tags.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

TagResource

Service: Amazon AppIntegrations Service

Adds the specified tags to the specified resource.

Request Syntax

```
POST /tags/resourceArn HTTP/1.1
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The Amazon Resource Name (ARN) of the resource.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UntagResource

Service: Amazon AppIntegrations Service

Removes the specified tags from the specified resource.

Request Syntax

```
DELETE /tags/resourceArn?tagKeys=tagKeys HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The Amazon Resource Name (ARN) of the resource.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}$`

Required: Yes

tagKeys

The tag keys.

Array Members: Minimum number of 1 item. Maximum number of 200 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateApplication

Service: Amazon AppIntegrations Service

Updates and persists an Application resource.

Request Syntax

```
PATCH /applications/ApplicationIdentifier HTTP/1.1
Content-type: application/json

{
   "ApplicationConfig": {
      "ContactHandling": {
         "Scope": "string"
      }
   },
   "ApplicationSourceConfig": {
      "ExternalUrlConfig": {
         "AccessUrl": "string",
         "ApprovedOrigins": [ "string" ]
      }
   },
   "ApplicationType": "string",
   "Description": "string",
   "IframeConfig": {
      "Allow": [ "string" ],
      "Sandbox": [ "string" ]
   },
   "InitializationTimeout": number,
   "IsService": boolean,
   "Name": "string",
   "Permissions": [ "string" ],
   "Publications": [
      {
         "Description": "string",
         "Event": "string",
         "Schema": "string"
      }
   ],
   "Subscriptions": [
      {
         "Description": "string",
         "Event": "string"
```

```
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

ApplicationIdentifier

The Amazon Resource Name (ARN) of the Application.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^(arn:aws:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.-]{0,1023}|[a-f0-9]{8}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{4}-[a-f0-9]{12})(:[\w\$]+)?$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ApplicationConfig

The configuration settings for the application.

Type: ApplicationConfig object

Required: No

ApplicationSourceConfig

The configuration for where the application should be loaded from.

Type: ApplicationSourceConfig object

Required: No

ApplicationType

The type of application.

Type: String

Valid Values: `STANDARD | SERVICE | MCP_SERVER`

Required: No

Description

The description of the application.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

IframeConfig

The iframe configuration for the application.

Type: IframeConfig object

Required: No

InitializationTimeout

The maximum time in milliseconds allowed to establish a connection with the workspace.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 600000.

Required: No

IsService

This parameter has been deprecated.

Indicates whether the application is a service.

Type: Boolean

Required: No

Name

The name of the application.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._ \-]+$`

Required: No

Permissions

The configuration of events or requests that the application has access to.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 150 items.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-\*]+$`

Required: No

Publications

This parameter has been deprecated.

The events that the application publishes.

Type: Array of Publication objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

Subscriptions

This parameter has been deprecated.

The events that the application subscribes.

Type: Array of Subscription objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UnsupportedOperationException

The operation is not supported.

HTTP Status Code: 400

UpdateDataIntegration

Service: Amazon AppIntegrations Service

Updates the description of a DataIntegration.

> **Note**
>
> You cannot create a DataIntegration association for a DataIntegration that has been previously associated. Use a different DataIntegration, or recreate the DataIntegration using the CreateDataIntegration API.

Request Syntax

```
PATCH /dataIntegrations/Identifier HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "Name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

Identifier

A unique identifier for the DataIntegration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

A description of the DataIntegration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

Name

The name of the DataIntegration.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateDataIntegrationAssociation

Service: Amazon AppIntegrations Service

Updates and persists a DataIntegrationAssociation resource.

> **Note**
>
> Updating a DataIntegrationAssociation with ExecutionConfiguration will rerun the on-demand job.

Request Syntax

```
PATCH /dataIntegrations/Identifier/associations/DataIntegrationAssociationIdentifier
 HTTP/1.1
Content-type: application/json

{
   "ExecutionConfiguration": {
      "ExecutionMode": "string",
      "OnDemandConfiguration": {
         "EndTime": "string",
         "StartTime": "string"
      },
      "ScheduleConfiguration": {
         "FirstExecutionFrom": "string",
         "Object": "string",
         "ScheduleExpression": "string"
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

DataIntegrationAssociationIdentifier

A unique identifier. of the DataIntegrationAssociation resource

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Identifier

A unique identifier for the DataIntegration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `.*\S.*`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ExecutionConfiguration

The configuration for how the files should be pulled from the source.

Type: ExecutionConfiguration object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateEventIntegration

Service: Amazon AppIntegrations Service

Updates the description of an event integration.

Request Syntax

```
PATCH /eventIntegrations/Name HTTP/1.1
Content-type: application/json

{
   "Description": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

Name

The name of the event integration.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z0-9\/\._\-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the event integration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Pattern: `.*`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceError

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Amazon Connect Contact Lens

The following actions are supported by Amazon Connect Contact Lens:

- ListRealtimeContactAnalysisSegments

ListRealtimeContactAnalysisSegments

Service: Amazon Connect Contact Lens

Provides a list of analysis segments for a real-time analysis session for voice.

> **Note**
>
> Voice data is retained for 24 hours. You must invoke this API during that time.

Request Syntax

```
POST /realtime-contact-analysis/analysis-segments HTTP/1.1
Content-type: application/json

{
   "ContactId": "string",
   "InstanceId": "string",
   "MaxResults": number,
   "NextToken": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId

The identifier of the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `.*\S.*`

Required: Yes

InstanceId

The identifier of the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `.*\S.*`

Required: Yes

MaxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

NextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "NextToken": "string",
   "Segments": [
      {
```

```
         "Categories": {
            "MatchedCategories": [ "string" ],
            "MatchedDetails": {
               "string" : {
                  "PointsOfInterest": [
                     {
                        "BeginOffsetMillis": number,
                        "EndOffsetMillis": number
                     }
                  ]
               }
            }
         },
         "PostContactSummary": {
            "Content": "string",
            "FailureCode": "string",
            "Status": "string"
         },
         "Transcript": {
            "BeginOffsetMillis": number,
            "Content": "string",
            "EndOffsetMillis": number,
            "Id": "string",
            "IssuesDetected": [
               {
                  "CharacterOffsets": {
                     "BeginOffsetChar": number,
                     "EndOffsetChar": number
                  }
               }
            ],
            "ParticipantId": "string",
            "ParticipantRole": "string",
            "Sentiment": "string"
         }
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken

If there are additional results, this is the token for the next set of results. If response includes `nextToken` there are two possible scenarios:

- There are more segments so another call is required to get them.
- There are no more segments at this time, but more may be available later (real-time analysis is in progress) so the client should call the operation again to get new segments.

If response does not include `nextToken`, the analysis is completed (successfully or failed) and there are no more segments to retrieve.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 131070.

Pattern: `.*\S.*`

Segments

An analyzed transcript or category.

Type: Array of RealtimeContactAnalysisSegment objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Examples

Example

This example illustrates one usage of ListRealtimeContactAnalysisSegments.

Sample Request

```
POST /realtime-contact-analysis/analysis-segments
{
  "InstanceId": "eeeeeee-eeee-eeee-eeee-eeeeeeeeeeee",
  "ContactId": "11111111-1111-1111-1111-11111111111",
  "MaxResults": 50,
  "NextToken": "fdsfsadgdfsgdfgfdhfghfghfgjmbnmnm"
}
```

Sample Response

```
{
    "Segments": [
        {
            "Transcript": {
                "Id": "tttttttt-tttt-tttt-tttt-tttttttt",
                "ParticipantId": "AGENT",
                "ParticipantRole": "AGENT",
                "Content": "I can't login.",
                "BeginOffsetMillis": 19010,
                "EndOffsetMillis": 22690,
                "Sentiment": "NEUTRAL",
                "IssuesDetected": [
```

```
                    {
                        "CharacterOffsets": {
                            "BeginOffsetChar": 8,

Amazon Connect Outbound Campaigns

The following actions are supported by Amazon Connect Outbound Campaigns:

- CreateCampaign
- DeleteCampaign
- DeleteConnectInstanceConfig
- DeleteInstanceOnboardingJob
- DescribeCampaign
- GetCampaignState
- GetCampaignStateBatch
- GetConnectInstanceConfig
- GetInstanceOnboardingJobStatus
- ListCampaigns
- ListTagsForResource
- PauseCampaign
- PutDialRequestBatch

- ResumeCampaign
- StartCampaign
- StartInstanceOnboardingJob
- StopCampaign
- TagResource
- UntagResource
- UpdateCampaignDialerConfig
- UpdateCampaignName
- UpdateCampaignOutboundCallConfig

CreateCampaign

Service: Amazon Connect Outbound Campaigns

Creates an outbound campaign.

> **Note**
>
> - For users to be able to view or edit a campaign at a later date by using the Amazon Connect user interface, you must add the instance ID as a tag.
> - After a campaign is saved, you can't change the dialer type for an agentless campaign, and you can't change the dialer type to agentless for progressive and predictive campaigns.

Request Syntax

```
PUT /campaigns HTTP/1.1
Content-type: application/json

{
   "connectInstanceId": "string",
   "dialerConfig": { ... },
   "name": "string",
   "outboundCallConfig": {
      "answerMachineDetectionConfig": {
         "awaitAnswerMachinePrompt": boolean,
         "enableAnswerMachineDetection": boolean
      },
      "connectContactFlowId": "string",
      "connectQueueId": "string",
      "connectSourcePhoneNumber": "string"
   },
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

dialerConfig

Dialer configuration for an outbound campaign.

Type: DialerConfig object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

name

The name of the campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

outboundCallConfig

Outbound call configuration for an outbound campaign.

Type: OutboundCallConfig object

Required: Yes

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "arn": "string",
   "id": "string",
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

arn

The Amazon Resource Name (ARN).

Type: String

Length Constraints: Minimum length of 20. Maximum length of 500.

id

The identifier of the campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota for your Amazon Connect has been exceeded. Contact Support.

HTTP Status Code: 402

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

DeleteCampaign

Service: Amazon Connect Outbound Campaigns

Deletes an outbound campaign.

Request Syntax

```
DELETE /campaigns/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign..

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

DeleteConnectInstanceConfig

Service: Amazon Connect Outbound Campaigns

Deletes configuration information for an Amazon Connect instance.

Request Syntax

```
DELETE /connect-instance/connectInstanceId/config HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidStateException

An attempt was made to modify a campaign state and the new campaign state is not valid. Check campaign state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

DeleteInstanceOnboardingJob

Service: Amazon Connect Outbound Campaigns

Deletes the workflow to onboard to outbound campaigns. Only `Failed` workflows can be deleted.

Request Syntax

```
DELETE /connect-instance/connectInstanceId/onboarding HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidStateException

An attempt was made to modify a campaign state and the new campaign state is not valid. Check campaign state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

DescribeCampaign

Service: Amazon Connect Outbound Campaigns

Describes an outbound campaign.

Request Syntax

```
GET /campaigns/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "campaign": {
      "arn": "string",
      "connectInstanceId": "string",
      "dialerConfig": { ... },
      "id": "string",
      "name": "string",
      "outboundCallConfig": {
         "answerMachineDetectionConfig": {
```

```
            "awaitAnswerMachinePrompt": boolean,
            "enableAnswerMachineDetection": boolean
         },
         "connectContactFlowId": "string",
         "connectQueueId": "string",
         "connectSourcePhoneNumber": "string"
      },
      "tags": {
         "string" : "string"
      }
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

campaign

The campaign.

Type: Campaign object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

GetCampaignState

Service: Amazon Connect Outbound Campaigns

Returns the state of an outbound campaign.

Request Syntax

```
GET /campaigns/id/state HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "state": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

state

The state of a campaign. For detailed descriptions of each state, see Campaign status in the *Amazon Connect Administrator Guide*.

Type: String

Valid Values: `Initialized | Running | Paused | Stopped | Failed`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

GetCampaignStateBatch

Service: Amazon Connect Outbound Campaigns

Returns the state of listed of outbound campaigns.

Request Syntax

```
POST /campaigns-state HTTP/1.1
Content-type: application/json

{
   "campaignIds": [ "string" ]
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

campaignIds

The identifiers of the campaigns.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "failedRequests": [
      {
         "campaignId": "string",
         "failureCode": "string"
      }
   ],
   "successfulRequests": [
      {
         "campaignId": "string",
         "state": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedRequests

Failed requests.

Type: Array of FailedCampaignStateResponse objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

successfulRequests

Successful requests.

Type: Array of SuccessfulCampaignStateResponse objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

GetConnectInstanceConfig

Service: Amazon Connect Outbound Campaigns

Get configuration information about an Amazon Connect instance.

Request Syntax

```
GET /connect-instance/connectInstanceId/config HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceConfig": {
      "connectInstanceId": "string",
      "encryptionConfig": {
         "enabled": boolean,
         "encryptionType": "string",
         "keyArn": "string"
```

```
        },
        "serviceLinkedRoleArn": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceConfig

Configuration information about the Amazon Connect instance.

Type: InstanceConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

GetInstanceOnboardingJobStatus

Service: Amazon Connect Outbound Campaigns

Gets the status of the workflow to onboard to outbound campaigns.

> **Note**
>
> The `GetInstanceOnboardingJobStatus` API may return a 404 response in the following cases:
>
> - The requested resource does not exist.
> - If the instance was onboarded more than 14 days ago, this API will return a 404 response as expected. In such cases, you should call the GetConnectInstanceConfig API to retrieve the instance details.

Request Syntax

```
GET /connect-instance/connectInstanceId/onboarding HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceOnboardingJobStatus": {
      "connectInstanceId": "string",
      "failureCode": "string",
      "status": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceOnboardingJobStatus

The status of the onboarding workflow.

Type: InstanceOnboardingJobStatus object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

See Also

ListCampaigns

Service: Amazon Connect Outbound Campaigns

Lists outbound campaigns.

Request Syntax

```
POST /campaigns-summary HTTP/1.1
Content-type: application/json

{
   "filters": {
      "instanceIdFilter": {
         "operator": "string",
         "value": "string"
      }
   },
   "maxResults": number,
   "nextToken": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

filters

Filters the list of campaigns.

Type: CampaignFilters object

Required: No

maxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "campaignSummaryList": [
      {
         "arn": "string",
         "connectInstanceId": "string",
         "id": "string",
         "name": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

campaignSummaryList

Summary information about the outbound campaigns.

Type: Array of CampaignSummary objects

nextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

ListTagsForResource

Service: Amazon Connect Outbound Campaigns

Lists tags for a resource.

Request Syntax

```
GET /tags/arn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

PauseCampaign

Service: Amazon Connect Outbound Campaigns

Pauses an outbound campaign. A paused outbound campaign can be resumed.

Request Syntax

```
POST /campaigns/id/pause HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

PutDialRequestBatch

Service: Amazon Connect Outbound Campaigns

Takes in a list of DialRequests to be dialed as part of an outbound campaign. For more information about using PutDialRequestBatch, see Best practices for using PutDialRequestBatch for outbound campaign calling.

Request Syntax

```
PUT /campaigns/id/dial-requests HTTP/1.1
Content-type: application/json

{
   "dialRequests": [
      {
         "attributes": {
            "string" : "string"
         },
         "clientToken": "string",
         "expirationTime": "string",
         "phoneNumber": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

dialRequests

Dial requests.

Type: Array of DialRequest objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "failedRequests": [
      {
         "clientToken": "string",
         "failureCode": "string",
         "id": "string"
      }
   ],
   "successfulRequests": [
      {
         "clientToken": "string",
         "id": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedRequests

Failed dial requests.

Type: Array of FailedRequest objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

successfulRequests

Successful dial requests.

Type: Array of SuccessfulRequest objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

ResumeCampaign

Service: Amazon Connect Outbound Campaigns

Resumes an outbound campaign.

Request Syntax

```
POST /campaigns/id/resume HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

StartCampaign

Service: Amazon Connect Outbound Campaigns

Starts an outbound campaign.

Request Syntax

```
POST /campaigns/id/start HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

StartInstanceOnboardingJob

Service: Amazon Connect Outbound Campaigns

Starts the workflow to onboard an Amazon Connect instance to outbound campaigns.

> **Note**
>
> If the current InstanceOnboardingJobStatus is **FAILED**, the `StartInstanceOnboardingJob` API will continue to return the existing status for 14 days from the initial attempt. To reattempt onboarding, first call the DeleteInstanceOnboardingJob API, then invoke the `StartInstanceOnboardingJob` API again.

Request Syntax

```
PUT /connect-instance/connectInstanceId/onboarding HTTP/1.1
Content-type: application/json

{
   "encryptionConfig": {
      "enabled": boolean,
      "encryptionType": "string",
      "keyArn": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

encryptionConfig

Encryption configuration for an Amazon Connect instance.

Type: EncryptionConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceOnboardingJobStatus": {
      "connectInstanceId": "string",
      "failureCode": "string",
      "status": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceOnboardingJobStatus

The status of the onboarding workflow.

Type: InstanceOnboardingJobStatus object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

StopCampaign

Service: Amazon Connect Outbound Campaigns

Stops an Amazon Connect campaign. When this API is called, no more calls are dialed for the campaign. Inflight contacts aren't impacted.

Request Syntax

```
POST /campaigns/id/stop HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

TagResource

Service: Amazon Connect Outbound Campaigns

Adds the specified tags to a resource.

Request Syntax

```
POST /tags/arn HTTP/1.1
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

Request Body

The request accepts the following data in JSON format.

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

- AWS SDK for Ruby V3

UntagResource

Service: Amazon Connect Outbound Campaigns

Removes the specified tags from the specified resource.

Request Syntax

```
DELETE /tags/arn?tagKeys=tagKeys HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

tagKeys

The tag keys.

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

UpdateCampaignDialerConfig

Service: Amazon Connect Outbound Campaigns

Updates DialerConfig for an outbound campaign.

Request Syntax

```
POST /campaigns/id/dialer-config HTTP/1.1
Content-type: application/json

{
   "dialerConfig": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

dialerConfig

Dialer configuration for an outbound campaign.

Type: DialerConfig object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

UpdateCampaignName

Service: Amazon Connect Outbound Campaigns

Updates the name of an outbound campaign.

Request Syntax

```
POST /campaigns/id/name HTTP/1.1
Content-type: application/json

{
   "name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

name

The name of the campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

UpdateCampaignOutboundCallConfig

Service: Amazon Connect Outbound Campaigns

Updates OutboundCallConfig for an outbound campaign.

Request Syntax

```
POST /campaigns/id/outbound-call-config HTTP/1.1
Content-type: application/json

{
   "answerMachineDetectionConfig": {
      "awaitAnswerMachinePrompt": boolean,
      "enableAnswerMachineDetection": boolean
   },
   "connectContactFlowId": "string",
   "connectSourcePhoneNumber": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

answerMachineDetectionConfig

Information about answering machine detection.

Type: AnswerMachineDetectionConfig object

Required: No

connectContactFlowId

The identifier of the published flow associated with this campaign.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 500.

Required: No

connectSourcePhoneNumber

The outbound phone number associated with this campaign. Only ported or claimed Amazon Connect phone numbers are allowed.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 100.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWSservice.

HTTP Status Code: 400

Amazon Connect Outbound Campaigns V2

The following actions are supported by Amazon Connect Outbound Campaigns V2:

- CreateCampaign
- DeleteCampaign
- DeleteCampaignChannelSubtypeConfig
- DeleteCampaignCommunicationLimits
- DeleteCampaignCommunicationTime
- DeleteConnectInstanceConfig
- DeleteConnectInstanceIntegration
- DeleteInstanceOnboardingJob
- DescribeCampaign
- GetCampaignState
- GetCampaignStateBatch
- GetConnectInstanceConfig
- GetInstanceOnboardingJobStatus
- ListCampaigns
- ListConnectInstanceIntegrations
- ListTagsForResource
- PauseCampaign
- PutConnectInstanceIntegration
- PutOutboundRequestBatch
- PutProfileOutboundRequestBatch
- ResumeCampaign
- StartCampaign
- StartInstanceOnboardingJob
- StopCampaign
- TagResource
- UntagResource
- UpdateCampaignChannelSubtypeConfig

- UpdateCampaignCommunicationLimits
- UpdateCampaignCommunicationTime
- UpdateCampaignFlowAssociation
- UpdateCampaignName
- UpdateCampaignSchedule
- UpdateCampaignSource

CreateCampaign

Service: Amazon Connect Outbound Campaigns V2

Creates an outbound campaign.

> **Note**
>
> - For users to be able to view or edit a campaign at a later date by using the Amazon Connect user interface, you must add the instance ID as a tag. For example, `{ "tags": {"owner": "arn:aws:connect:{REGION}:{AWS_ACCOUNT_ID}:instance/{CONNECT_INSTANCE_ID}"}}`.
> - After a campaign is created, you can't add/remove source.

Request Syntax

```
PUT /v2/campaigns HTTP/1.1
Content-type: application/json

{
   "channelSubtypeConfig": {
      "email": {
         "capacity": number,
         "defaultOutboundConfig": {
            "connectSourceEmailAddress": "string",
            "sourceEmailAddressDisplayName": "string",
            "wisdomTemplateArn": "string"

```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

channelSubtypeConfig

Channel subtype configuration for an outbound campaign.

Type: ChannelSubtypeConfig object

Required: No

communicationLimitsOverride

Communication limits configuration for an outbound campaign.

Type: CommunicationLimitsConfig object

Required: No

communicationTimeConfig

Communication time configuration for an outbound campaign.

Type: CommunicationTimeConfig object

Required: No

connectCampaignFlowArn

The Amazon Resource Name (ARN) of the Amazon Connect campaign flow.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: No

connectInstanceId

The identifier of the Amazon Connect instance. You can find the instanceId in the ARN of the instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

name

The name of the campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

schedule

Schedule configuration for an outbound campaign.

Type: Schedule object

Required: No

source

Source configuration for an outbound campaign.

Type: Source object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

tags

The tags used to organize, track, or control access for this resource. For example, `{ "tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

type

The type of campaign.

Type: String

Valid Values: `MANAGED | JOURNEY`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "arn": "string",
   "id": "string",
   "tags": {
```

```
        "string" : "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

arn

The Amazon Resource Name (ARN) of the outbound campaign.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 500.

id

The identifier of the outbound campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

tags

The tags used to organize, track, or control access for this resource. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota for your Amazon Connect has been exceeded. Contact AWS Support.

HTTP Status Code: 402

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteCampaign

Service: Amazon Connect Outbound Campaigns V2

Deletes an outbound campaign. Only campaigns in `Initialized`, `Failed`, `Completed`, or `Stopped` states are valid for this operation.

Request Syntax

```
DELETE /v2/campaigns/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteCampaignChannelSubtypeConfig

Service: Amazon Connect Outbound Campaigns V2

Deletes the channel subtype configuration of an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
DELETE /v2/campaigns/id/channel-subtype-config?channelSubtype=channelSubtype HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

channelSubtype

The name of the channel subtype configuration.

Valid Values: `TELEPHONY | SMS | EMAIL | WHATSAPP`

Required: Yes

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteCampaignCommunicationLimits

Service: Amazon Connect Outbound Campaigns V2

Deletes the communication limits configuration of an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
DELETE /v2/campaigns/id/communication-limits?config=config HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

config

The name of the communication limits configuration.

Valid Values: `ALL_CHANNEL_SUBTYPES`

Required: Yes

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteCampaignCommunicationTime

Service: Amazon Connect Outbound Campaigns V2

Deletes the communication time configuration of an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
DELETE /v2/campaigns/id/communication-time?config=config HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

config

The name of the communication time configuration.

Valid Values: `TELEPHONY | SMS | EMAIL | WHATSAPP`

Required: Yes

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteConnectInstanceConfig

Service: Amazon Connect Outbound Campaigns V2

Deletes configuration information for an Amazon Connect instance.

Request Syntax

```
DELETE /v2/connect-instance/connectInstanceId/config?
campaignDeletionPolicy=campaignDeletionPolicy HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

campaignDeletionPolicy

The policy to enact on existing campaigns during instance configuration deletion. The default is `RETAIN_ALL`, if no value is given.

Valid Values: `RETAIN_ALL | DELETE_ALL`

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidStateException

An attempt was made to modify a resource that is in a state that is not valid.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteConnectInstanceIntegration

Service: Amazon Connect Outbound Campaigns V2

Deletes integration for an Amazon Connect instance.

Request Syntax

```
POST /v2/connect-instance/connectInstanceId/integrations/delete HTTP/1.1
Content-type: application/json

{
   "integrationIdentifier": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

integrationIdentifier

The identifier of the integration between an Amazon Connect instance and other services.

Type: IntegrationIdentifier object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DeleteInstanceOnboardingJob

Service: Amazon Connect Outbound Campaigns V2

Deletes the workflow to onboard to outbound campaigns. Only `Failed` workflows can be deleted.

Request Syntax

```
DELETE /v2/connect-instance/connectInstanceId/onboarding HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidStateException

An attempt was made to modify a resource that is in a state that is not valid.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

DescribeCampaign

Service: Amazon Connect Outbound Campaigns V2

Describes an outbound campaign.

Request Syntax

```
GET /v2/campaigns/id HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "campaign": {
      "arn": "string",
      "channelSubtypeConfig": {
         "email": {
            "capacity": number,
            "defaultOutboundConfig": {
               "connectSourceEmailAddress": "string",
               "sourceEmailAddressDisplayName": "string",
               "wisdomTemplateArn": "string"
```

```
            },
            "outboundMode": { ... }
         },
         "sms": {
            "capacity": number,
            "defaultOutboundConfig": {
               "connectSourcePhoneNumberArn": "string",
               "wisdomTemplateArn": "string"
            },
            "outboundMode": { ... }
         },
         "telephony": {
            "capacity": number,
            "connectQueueId": "string",
            "defaultOutboundConfig": {
               "answerMachineDetectionConfig": {
                  "awaitAnswerMachinePrompt": boolean,
                  "enableAnswerMachineDetection": boolean
               },
               "connectContactFlowId": "string",
               "connectSourcePhoneNumber": "string",
               "ringTimeout": number
            },
            "outboundMode": { ... }
         },
         "whatsApp": {
            "capacity": number,
            "defaultOutboundConfig": {
               "connectSourcePhoneNumberArn": "string",
               "wisdomTemplateArn": "string"
            },
            "outboundMode": { ... }
         }
      },
      "communicationLimitsOverride": {
         "allChannelSubtypes": { ... },
         "instanceLimitsHandling": "string"
      },
      "communicationTimeConfig": {
         "email": {
            "openHours": { ... },
            "restrictedPeriods": { ... }
         },
         "localTimeZoneConfig": {
```

```
            "defaultTimeZone": "string",
            "localTimeZoneDetection": [ "string" ]
         },
         "sms": {
            "openHours": { ... },
            "restrictedPeriods": { ... }
         },
         "telephony": {
            "openHours": { ... },
            "restrictedPeriods": { ... }
         },
         "whatsApp": {
            "openHours": { ... },
            "restrictedPeriods": { ... }
         }
      },
      "connectCampaignFlowArn": "string",
      "connectInstanceId": "string",
      "id": "string",
      "name": "string",
      "schedule": {
         "endTime": "string",
         "refreshFrequency": "string",
         "startTime": "string"
      },
      "source": { ... },
      "tags": {
         "string" : "string"
      },
      "type": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

campaign

The configuration for an outbound campaign.

Type: Campaign object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

GetCampaignState

Service: Amazon Connect Outbound Campaigns V2

Returns the state of an outbound campaign.

Request Syntax

```
GET /v2/campaigns/id/state HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "state": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

state

The state of a campaign. For detailed descriptions of each state, see Campaign status in the Amazon Connect Administrator Guide.

Type: String

Valid Values: `Initialized | Running | Paused | Stopped | Failed | Completed`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

GetCampaignStateBatch

Service: Amazon Connect Outbound Campaigns V2

Returns the state of listed of outbound campaigns.

Request Syntax

```
POST /v2/campaigns-state HTTP/1.1
Content-type: application/json

{
   "campaignIds": [ "string" ]
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

campaignIds

The identifiers of the campaigns.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "failedRequests": [
      {
         "campaignId": "string",
         "failureCode": "string"
      }
   ],
   "successfulRequests": [
      {
         "campaignId": "string",
         "state": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedRequests

Failed requests.

Type: Array of FailedCampaignStateResponse objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

successfulRequests

Successful requests.

Type: Array of SuccessfulCampaignStateResponse objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

GetConnectInstanceConfig

Service: Amazon Connect Outbound Campaigns V2

Get configuration information about an Amazon Connect instance.

Request Syntax

```
GET /v2/connect-instance/connectInstanceId/config HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceConfig": {
      "connectInstanceId": "string",
      "encryptionConfig": {
         "enabled": boolean,
         "encryptionType": "string",
         "keyArn": "string"
```

```
        },
        "serviceLinkedRoleArn": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceConfig

Configuration information about the Amazon Connect instance.

Type: InstanceConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

GetInstanceOnboardingJobStatus

Service: Amazon Connect Outbound Campaigns V2

Gets the status of the workflow to onboard to outbound campaigns.

> **Note**
>
> The `GetInstanceOnboardingJobStatus` API may return a 404 response in the following cases:
>
> - The requested resource does not exist.
> - If the instance was onboarded more than 14 days ago, this API will return a 404 response as expected. In such cases, you should call the GetConnectInstanceConfig API to retrieve the instance details.

Request Syntax

```
GET /v2/connect-instance/connectInstanceId/onboarding HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceOnboardingJobStatus": {
      "connectInstanceId": "string",
      "failureCode": "string",
      "status": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceOnboardingJobStatus

The status of the onboarding workflow.

Type: InstanceOnboardingJobStatus object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

ListCampaigns

Service: Amazon Connect Outbound Campaigns V2

Lists outbound campaigns.

Request Syntax

```
POST /v2/campaigns-summary HTTP/1.1
Content-type: application/json

{
   "filters": {
      "instanceIdFilter": {
         "operator": "string",
         "value": "string"
      }
   },
   "maxResults": number,
   "nextToken": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

filters

Filters the list of campaigns.

Type: CampaignFilters object

Required: No

maxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "campaignSummaryList": [
      {
         "arn": "string",
         "channelSubtypes": [ "string" ],
         "connectCampaignFlowArn": "string",
         "connectInstanceId": "string",
         "id": "string",
         "name": "string",
         "schedule": {
            "endTime": "string",
            "refreshFrequency": "string",
            "startTime": "string"
         },
         "type": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

campaignSummaryList

Summary information about the outbound campaigns.

Type: Array of CampaignSummary objects

nextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

ListConnectInstanceIntegrations

Service: Amazon Connect Outbound Campaigns V2

Lists integrations with the Amazon Connect instance.

Request Syntax

```
GET /v2/connect-instance/connectInstanceId/integrations?
maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 50.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 1000.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "integrationSummaryList": [
      { ... }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

integrationSummaryList

Summary information about the integrations.

Type: Array of IntegrationSummary objects

nextToken

If there are additional results, this is the token for the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

ListTagsForResource

Service: Amazon Connect Outbound Campaigns V2

Lists tags for a resource.

Request Syntax

```
GET /v2/tags/arn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags

The tags used to organize, track, or control access for this resource. For example, `{ "tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

PauseCampaign

Service: Amazon Connect Outbound Campaigns V2

Pauses an outbound campaign. A paused outbound campaign can be resumed.

Request Syntax

```
POST /v2/campaigns/id/pause HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

PutConnectInstanceIntegration

Service: Amazon Connect Outbound Campaigns V2

Puts an integration for the Amazon Connect instance.

Request Syntax

```
PUT /v2/connect-instance/connectInstanceId/integrations HTTP/1.1
Content-type: application/json

{
   "integrationConfig": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

integrationConfig

The integration configuration for the Amazon Connect instance

Type: IntegrationConfig object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

PutOutboundRequestBatch

Service: Amazon Connect Outbound Campaigns V2

Takes in a list of outbound requests to be placed as part of an outbound campaign.

Request Syntax

```
PUT /v2/campaigns/id/outbound-requests HTTP/1.1
Content-type: application/json

{
   "outboundRequests": [
      {
         "channelSubtypeParameters": { ... },
         "clientToken": "string",
         "expirationTime": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

outboundRequests

Outbound requests for outreaching.

Type: Array of OutboundRequest objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "failedRequests": [
      {
         "clientToken": "string",
         "failureCode": "string",
         "id": "string"
      }
   ],
   "successfulRequests": [
      {
         "clientToken": "string",
         "id": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedRequests

Failed outbound requests.

Type: Array of FailedRequest objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

successfulRequests

Successful outbound requests.

Type: Array of SuccessfulRequest objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

PutProfileOutboundRequestBatch

Service: Amazon Connect Outbound Campaigns V2

Takes in a list of profile outbound requests to be placed as part of an outbound campaign. For more information on profiles, see What is a customer profile in Amazon Connect?.

> **Important**
>
> Only Customer Profiles event triggers are permitted to invoke this API.

Request Syntax

```
PUT /v2/campaigns/id/profile-outbound-requests HTTP/1.1
Content-type: application/json

{
   "profileOutboundRequests": [
      {
         "clientToken": "string",
         "expirationTime": "string",
         "profileId": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

profileOutboundRequests

Profile outbound requests for outreaching.

Type: Array of ProfileOutboundRequest objects

Array Members: Minimum number of 1 item. Maximum number of 20 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "failedRequests": [
      {
         "clientToken": "string",
         "failureCode": "string",
         "id": "string"
      }
   ],
   "successfulRequests": [
      {
         "clientToken": "string",
         "id": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedRequests

Failed profile outbound requests.

Type: Array of FailedProfileOutboundRequest objects

Array Members: Minimum number of 0 items. Maximum number of 20 items.

successfulRequests

Successful profile outbound requests.

Type: Array of SuccessfulProfileOutboundRequest objects

Array Members: Minimum number of 0 items. Maximum number of 20 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

ResumeCampaign

Service: Amazon Connect Outbound Campaigns V2

Resumes an outbound campaign.

Request Syntax

```
POST /v2/campaigns/id/resume HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

StartCampaign

Service: Amazon Connect Outbound Campaigns V2

Starts an outbound campaign.

> **Note**
>
> - After a campaign is started, `schedule`, `source`, `associatedCampaignFlowArn`, `communicationTimeConfig`, and `communicationLimitsOverride` cannot be modified.
> - After a campaign is started, the queue of the telephony `channelSubtypeConfig` cannot be modified.
> - After a campaign is started, you can't change the outbound mode of the telephony `channelSubtypeConfig` from agentless to progressive/predictive, or the other way around.

Request Syntax

```
POST /v2/campaigns/id/start HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

StartInstanceOnboardingJob

Service: Amazon Connect Outbound Campaigns V2

Starts the workflow to onboard an Amazon Connect instance to Outbound Campaigns.

> **Note**
>
> If the current InstanceOnboardingJobStatus is **FAILED**, the `StartInstanceOnboardingJob` API will continue to return the existing status for 14 days from the initial attempt. To reattempt onboarding, first call the DeleteInstanceOnboardingJob API, then invoke the `StartInstanceOnboardingJob` API again.

Request Syntax

```
PUT /v2/connect-instance/connectInstanceId/onboarding HTTP/1.1
Content-type: application/json

{
   "encryptionConfig": {
      "enabled": boolean,
      "encryptionType": "string",
      "keyArn": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

connectInstanceId

The identifier of the Amazon Connect instance. You can find the `instanceId` in the ARN of the instance.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-_.a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

encryptionConfig

Encryption configuration for an Amazon Connect instance.

Type: EncryptionConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "connectInstanceOnboardingJobStatus": {
      "connectInstanceId": "string",
      "failureCode": "string",
      "status": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

connectInstanceOnboardingJobStatus

The status of the onboarding workflow.

Type: InstanceOnboardingJobStatus object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

StopCampaign

Service: Amazon Connect Outbound Campaigns V2

Stops an Amazon Connect campaign. When this API is called, no more outbound requests are started for the campaign. Inflight requests aren't impacted.

Request Syntax

```
POST /v2/campaigns/id/stop HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

TagResource

Service: Amazon Connect Outbound Campaigns V2

Adds the specified tags to a resource.

Request Syntax

```
POST /v2/tags/arn HTTP/1.1
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

Request Body

The request accepts the following data in JSON format.

tags

The tags used to organize, track, or control access for this resource. For example, `{ "tags": {"key1":"value1", "key2":"value2"} }`.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UntagResource

Service: Amazon Connect Outbound Campaigns V2

Removes the specified tags from the specified resource.

Request Syntax

```
DELETE /v2/tags/arn?tagKeys=tagKeys HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN).

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

tagKeys

The tag keys.

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignChannelSubtypeConfig

Service: Amazon Connect Outbound Campaigns V2

Updates `ChannelSubtypeConfig` for an outbound campaign.

Request Syntax

```
POST /v2/campaigns/id/channel-subtype-config HTTP/1.1
Content-type: application/json

{
   "channelSubtypeConfig": {
      "email": {
         "capacity": number,
         "defaultOutboundConfig": {
            "connectSourceEmailAddress": "string",
            "sourceEmailAddressDisplayName": "string",
            "wisdomTemplateArn": "string"
         },
         "outboundMode": { ... }
      },
      "sms": {
         "capacity": number,
         "defaultOutboundConfig": {
            "connectSourcePhoneNumberArn": "string",
            "wisdomTemplateArn": "string"
         },
         "outboundMode": { ... }
      },
      "telephony": {
         "capacity": number,
         "connectQueueId": "string",
         "defaultOutboundConfig": {
            "answerMachineDetectionConfig": {
               "awaitAnswerMachinePrompt": boolean,
               "enableAnswerMachineDetection": boolean
            },
            "connectContactFlowId": "string",
            "connectSourcePhoneNumber": "string",
            "ringTimeout": number
         },
         "outboundMode": { ... }
      },
```

```
      "whatsApp": {
         "capacity": number,
         "defaultOutboundConfig": {
            "connectSourcePhoneNumberArn": "string",
            "wisdomTemplateArn": "string"
         },
         "outboundMode": { ... }
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

channelSubtypeConfig

Channel subtype configuration for an outbound campaign.

Type: ChannelSubtypeConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignCommunicationLimits

Service: Amazon Connect Outbound Campaigns V2

Updates `CommunicationLimitsOverride` for an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
POST /v2/campaigns/id/communication-limits HTTP/1.1
Content-type: application/json

{
   "communicationLimitsOverride": {
      "allChannelSubtypes": { ... },
      "instanceLimitsHandling": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

communicationLimitsOverride

Communication limits configuration for an outbound campaign.

Type: CommunicationLimitsConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignCommunicationTime

Service: Amazon Connect Outbound Campaigns V2

Updates `CommunicationTimeConfig` for an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
POST /v2/campaigns/id/communication-time HTTP/1.1
Content-type: application/json

{
   "communicationTimeConfig": {
      "email": {
         "openHours": { ... },
         "restrictedPeriods": { ... }
      },
      "localTimeZoneConfig": {
         "defaultTimeZone": "string",
         "localTimeZoneDetection": [ "string" ]
      },
      "sms": {
         "openHours": { ... },
         "restrictedPeriods": { ... }
      },
      "telephony": {
         "openHours": { ... },
         "restrictedPeriods": { ... }
      },
      "whatsApp": {
         "openHours": { ... },
         "restrictedPeriods": { ... }
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

communicationTimeConfig

Communication time configuration for an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Type: CommunicationTimeConfig object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignFlowAssociation

Service: Amazon Connect Outbound Campaigns V2

Updates associated Amazon Connect campaign flow for an outbound campaign.

Request Syntax

```
POST /v2/campaigns/id/flow HTTP/1.1
Content-type: application/json

{
   "connectCampaignFlowArn": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

connectCampaignFlowArn

The Amazon Resource Name (ARN) of the Amazon Connect campaign flow.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 500.

Pattern: `arn:[a-zA-Z0-9-]+:[a-zA-Z0-9-]+:[a-z]{2}-[a-z]+-\d{1,2}:[a-zA-Z0-9-]+:[^:]+(?:/[^:]+)*(?:/[^:]+)?(?:\:[^:]+)?`

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignName

Service: Amazon Connect Outbound Campaigns V2

Updates the name of an outbound campaign.

Request Syntax

```
POST /v2/campaigns/id/name HTTP/1.1
Content-type: application/json

{
   "name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

name

The name of the outbound campaign.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 127.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

UpdateCampaignSchedule

Service: Amazon Connect Outbound Campaigns V2

Updates schedule of an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
POST /v2/campaigns/id/schedule HTTP/1.1
Content-type: application/json

{
   "schedule": {
      "endTime": "string",
      "refreshFrequency": "string",
      "startTime": "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

schedule

The schedule configuration of the outbound campaign.

Type: Schedule object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

- AWS SDK for Ruby V3

UpdateCampaignSource

Service: Amazon Connect Outbound Campaigns V2

Updates source of an outbound campaign. Only campaigns in the `Initialized` state are valid for this operation.

Request Syntax

```
POST /v2/campaigns/id/source HTTP/1.1
Content-type: application/json

{
   "source": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

id

The identifier of the outbound campaign.

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `[-:/a-zA-Z0-9]+`

Required: Yes

Request Body

The request accepts the following data in JSON format.

source

The source configuration of the outbound campaign.

Type: Source object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The request could not be processed because of a conflict in the current state of the resource.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the outbound campaigns.

HTTP Status Code: 500

InvalidCampaignStateException

An attempt was made to modify a campaign that is in a state that is not valid. Check your campaign to ensure that it is in a valid state before retrying the operation.

HTTP Status Code: 409

ResourceNotFoundException

The specified resource does not exist.

HTTP Status Code: 404

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

Amazon Connect Cases

The following actions are supported by Amazon Connect Cases:

- BatchGetCaseRule
- BatchGetField
- BatchPutFieldOptions
- CreateCase
- CreateCaseRule
- CreateDomain
- CreateField
- CreateLayout
- CreateRelatedItem
- CreateTemplate
- DeleteCase

- DeleteCaseRule
- DeleteDomain
- DeleteField
- DeleteLayout
- DeleteRelatedItem
- DeleteTemplate
- GetCase
- GetCaseAuditEvents
- GetCaseEventConfiguration
- GetDomain
- GetLayout
- GetTemplate
- ListCaseRules
- ListCasesForContact
- ListDomains
- ListFieldOptions
- ListFields
- ListLayouts
- ListTagsForResource
- ListTemplates
- PutCaseEventConfiguration
- SearchAllRelatedItems
- SearchCases
- SearchRelatedItems
- TagResource
- UntagResource
- UpdateCase
- UpdateCaseRule
- UpdateField
- UpdateLayout

- UpdateRelatedItem
- UpdateTemplate

BatchGetCaseRule

Service: Amazon Connect Cases

Gets a batch of case rules. In the Amazon Connect admin website, case rules are known as *case field conditions*. For more information about case field conditions, see Add case field conditions to a case template.

Request Syntax

```
POST /domains/domainId/rules-batch HTTP/1.1
Content-type: application/json

{
   "caseRules": [
      {
         "id": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

Unique identifier of a Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

caseRules

A list of case rule identifiers.

Type: Array of CaseRuleIdentifier objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "caseRules": [
      {
         "caseRuleArn": "string",
         "caseRuleId": "string",
         "createdTime": "string",
         "deleted": boolean,
         "description": "string",
         "lastModifiedTime": "string",
         "name": "string",
         "rule": { ... },
         "tags": {
            "string" : "string"
         }
      }
   ],
   "errors": [
      {
         "errorCode": "string",
         "id": "string",
         "message": "string"
      }
   ],
   "unprocessedCaseRules": [ "string" ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

caseRules

A list of detailed case rule information.

Type: Array of GetCaseRuleResponse objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

errors

A list of case rule errors.

Type: Array of CaseRuleError objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

unprocessedCaseRules

A list of unprocessed case rule identifiers.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

BatchGetField

Service: Amazon Connect Cases

Returns the description for the list of fields in the request parameters.

Request Syntax

```
POST /domains/domainId/fields-batch HTTP/1.1
Content-type: application/json

{
   "fields": [
      {
         "id": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

fields

A list of unique field identifiers.

Type: Array of FieldIdentifier objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "errors": [
      {
         "errorCode": "string",
         "id": "string",
         "message": "string"
      }
   ],
   "fields": [
      {
         "attributes": { ... },
         "createdTime": "string",
         "deleted": boolean,
         "description": "string",
         "fieldArn": "string",
         "fieldId": "string",
         "lastModifiedTime": "string",
         "name": "string",
         "namespace": "string",
         "tags": {
            "string" : "string"
         },
         "type": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

errors

A list of field errors.

Type: Array of FieldError objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

fields

A list of detailed field information.

Type: Array of GetFieldResponse objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of BatchGetField.

```
{
   "fields":[
   {
      "id":"[field_id_1]"
   },
   {
      "id":"[field_id_2]"
   },
   {
      "id":"case_id"
   }
   ]
}
```

```
{
   "errors":[
     ],
     "fields":[
      {
      "description":"Test with description",
      "fieldArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/field/
[field_id_1]",
      "fieldId":"[field_id_1]",
      "name":"field1",
      "namespace":"Custom",
      "tags":{
         "resourceArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/
field/5a17045a-9150-48f9-8cd5-8a5946585b73"
         },
```

```
      "type":"SingleSelect"
      },
      {
      "description":"Unique Identifier of the case",
      "fieldArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/field/
case_id",
      "fieldId":"case_id",
      "name":"Case Id",
      "namespace":"System",
      "tags":{
         "resourceArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/field/
case_id"
         },
      "type":"Text"
      },
      {
         "description":"test",
         "fieldArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/field/
[field_id_2]",
         "fieldId":"[field_id_2]",
         "name":"field2",
         "namespace":"Custom",
         "tags":{
            "resourceArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/
field/[field_id_2]"
            },
      "type":"SingleSelect"
      }
   ]
}
```

BatchPutFieldOptions

Service: Amazon Connect Cases

Creates and updates a set of field options for a single select field in a Cases domain.

Request Syntax

```
PUT /domains/domainId/fields/fieldId/options HTTP/1.1
Content-type: application/json

{
   "options": [
      {
         "active": boolean,
         "name": "string",
         "value": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

fieldId

The unique identifier of a field.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

options

A list of `FieldOption` objects.

Type: Array of FieldOption objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "errors": [
      {
         "errorCode": "string",
         "message": "string",
         "value": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

errors

A list of field errors.

Type: Array of FieldOptionError objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Example

Request and Response Example:

```
{
  "options": [
    {
    "active": true,
    "name": "California",
    "value": "CA"
    },
    {
    "active": true,
    "name": "Washington",
    "value": "WA"
    },
    {
    "active": false,
    "name": "New York",
    "value": "NY"
    },
    {
    "active": false,
    "name": "Massachusetts",
    "value": "MA"
    }
  ]
}
```

```
{
"errors": []
}
```

CreateCase

Service: Amazon Connect Cases

> **Note**
>
> If you provide a value for `PerformedBy.UserArn` you must also have connect:DescribeUser permission on the User ARN resource that you provide

Creates a case in the specified Cases domain. Case system and custom fields are taken as an array id/value pairs with a declared data types.

When creating a case from a template that has tag propagation configurations, the specified tags are automatically applied to the case.

The following fields are required when creating a case:

- `customer_id` - You must provide the full customer profile ARN in this format: `arn:aws:profile:your_AWS_Region:your_AWS_account ID:domains/your_profiles_domain_name/profiles/profile_ID`
- `title`

Request Syntax

```
POST /domains/domainId/cases HTTP/1.1
Content-type: application/json

{
   "clientToken": "string",
   "fields": [
      {
         "id": "string",
         "value": { ... }
      }
   ],
   "performedBy": { ... },
   "tags": {
      "string" : "string"
   },
   "templateId": "string"
```

```
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

clientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

fields

An array of objects with field ID (matching ListFields/DescribeField) and value union data.

Type: Array of FieldValue objects

Array Members: Minimum number of 0 items. Maximum number of 220 items.

Required: Yes

performedBy

Represents the entity that performed the action.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Minimum number of 0 items. Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `(?![aA][wW][sS]:)[a-zA-Z0-9 _.:/=+\-@]+`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: `([a-zA-Z0-9 _.:/=+\-@]*)`

Required: No

templateId

A unique identifier of a template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "caseArn": "string",
   "caseId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

caseArn

The Amazon Resource Name (ARN) of the case.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

caseId

A unique identifier of the case.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of CreateCase.

```
{
  "templateId": "[template_id]",
  "fields": [
  {
    "id": "customer_id",
    "value": {
```

```
      "stringValue": "[customer_id]"
     },
    {
    "id": "title",
    "value": {
      "stringValue": "Incorrect Shipping Address"
      }
    }
  ],
  "clientToken": "[clientToken]",
  "tags": {
    "Department": "Shipping",
    "Priority": "High"
  }
}
```

```
{
  "caseArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/case/[case_id]",
  "caseId": "[case_id]"
}
```

CreateCaseRule

Service: Amazon Connect Cases

Creates a new case rule. In the Amazon Connect admin website, case rules are known as *case field conditions*. For more information about case field conditions, see Add case field conditions to a case template.

Request Syntax

```
POST /domains/domainId/case-rules HTTP/1.1
Content-type: application/json

{
   "description": "string",
   "name": "string",
   "rule": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

Unique identifier of a Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

description

The description of a case rule.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

name

Name of the case rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: Yes

rule

Represents what rule type should take place, under what conditions.

Type: CaseRuleDetails object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "caseRuleArn": "string",
   "caseRuleId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

caseRuleArn

The Amazon Resource Name (ARN) of a case rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

caseRuleId

Unique identifier of a case rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Example

This example illustrates one usage of CreateCaseRule.

```
CreateCaseRule
POST /domains/domainId/case-rules HTTP/1.1
Content-type: application/json
{
 "name": "RequiredIfStatusOpen",
 "description": "Makes field required if status is set to Open",
 "rule": {
  "required": {
   "conditions": [
    {
```

```
     "equalTo": {
      "operandOne": {
       "fieldId": "status"
      },
      "operandTwo": {
       "doubleValue": "Open"
      },
      "result": true
     }
    }
   ],
   "defaultValue": false
  }
 }
}
```

CreateDomain

Service: Amazon Connect Cases

Creates a domain, which is a container for all case data, such as cases, fields, templates and layouts. Each Amazon Connect instance can be associated with only one Cases domain.

> **Important**
>
> This will not associate your connect instance to Cases domain. Instead, use the Amazon Connect CreateIntegrationAssociation API. You need specific IAM permissions to successfully associate the Cases domain. For more information, see Onboard to Cases.

Request Syntax

```
POST /domains HTTP/1.1
Content-type: application/json

{
   "name": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

name

The name for your Cases domain. It must be unique for your AWS account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "domainArn": "string",
   "domainId": "string",
   "domainStatus": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

domainArn

The Amazon Resource Name (ARN) for the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

domainId

The unique identifier of the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

domainStatus

The status of the domain.

Type: String

Valid Values: `Active | CreationInProgress | CreationFailed`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of CreateDomain.

```
{
  "name": "demo-amazon-cases-domain"
 }
```

```
{
  "domainArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]",
  "domainId": "[domain_id]",
  "domainStatus": "CreationInProgress"
}
```

CreateField

Service: Amazon Connect Cases

Creates a field in the Cases domain. This field is used to define the case object model (that is, defines what data can be captured on cases) in a Cases domain.

Request Syntax

```
POST /domains/domainId/fields HTTP/1.1
Content-type: application/json

{
   "attributes": { ... },
   "description": "string",
   "name": "string",
   "type": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

attributes

Union of field attributes.

Type: FieldAttributes object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

description

The description of the field.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

name

The name of the field.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: Yes

type

Defines the data type, some system constraints, and default display of the field.

Type: String

Valid Values: `Text | Number | Boolean | DateTime | SingleSelect | Url | User`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "fieldArn": "string",
   "fieldId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

fieldArn

The Amazon Resource Name (ARN) of the field.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

fieldId

The unique identifier of a field.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of CreateField.

```
{
  "name": "Color",
  "type": "Text",
  "description": "The color of the item"
}
```

```
{
  "fieldArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/field/
[field_id]",
  "fieldId": "[field_id]"
}
```

CreateLayout

Service: Amazon Connect Cases

Creates a layout in the Cases domain. Layouts define the following configuration in the top section and More Info tab of the Cases user interface:

- Fields to display to the users
- Field ordering

> **Note**
>
> Title and Status fields cannot be part of layouts since they are not configurable.

Request Syntax

```
POST /domains/domainId/layouts HTTP/1.1
Content-type: application/json

{
   "content": { ... },
   "name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

content

Information about which fields will be present in the layout, and information about the order of the fields.

Type: LayoutContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

name

The name of the layout. It must be unique for the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "layoutArn": "string",
   "layoutId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

layoutArn

The Amazon Resource Name (ARN) of the newly created layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

layoutId

The unique identifier of the layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of CreateLayout.

```
{
  "content": {
    "basic": {
      "moreInfo": {
        "sections": [
          {

CreateRelatedItem

Service: Amazon Connect Cases

Creates a related item (comments, tasks, and contacts) and associates it with a case.

There's a quota for the number of fields allowed in a Custom type related item. See Amazon Connect Cases quotas.

Use cases

Following are examples of related items that you may want to associate with a case:

- Related contacts, such as calls, chats, emails tasks
- Comments, for agent notes
- SLAs, to capture target resolution goals
- Cases, to capture related Amazon Connect Cases
- Files, such as policy documentation or customer-provided attachments
- Custom related items, which provide flexibility for you to define related items that such as bookings, orders, products, notices, and more

Important things to know

- If you are associating a contact to a case by passing in `Contact` for a `type`, you must have DescribeContact permission on the ARN of the contact that you provide in `content.contact.contactArn`.
- A Related Item is a resource that is associated with a case. It may or may not have an external identifier linking it to an external resource (for example, a `contactArn`). All Related Items have their own internal identifier, the `relatedItemArn`. Examples of related items include `comments` and `contacts`.
- If you provide a value for `performedBy.userArn` you must also have DescribeUser permission on the ARN of the user that you provide.
- The `type` field is reserved for internal use only.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /domains/domainId/cases/caseId/related-items/ HTTP/1.1
Content-type: application/json

{
   "content": { ... },
   "performedBy": { ... },
   "type": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

content

The content of a related item to be created.

Type: RelatedItemInputContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

performedBy

Represents the creator of the related item.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

type

The type of a related item.

Type: String

Valid Values: `Contact | Comment | File | Sla | ConnectCase | Custom`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "relatedItemArn": "string",
   "relatedItemId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

relatedItemArn

The Amazon Resource Name (ARN) of the related item.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

relatedItemId

The unique identifier of the related item.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

This section provides examples for supported related item types.

Type: Comment

Request:

```
{
  "content": {
    "comment": {
      "body": "Hello World!",
      "contentType": "Text/Plain"
    }
  },
  "type": "Comment"
}
```

Type: Sla

Request:

- `name` is the descriptive name for the SLA
- `targetSlaMinutes` is the time in minutes within which the SLA must be met
- `type` only supports "CaseField"
- `fieldId` only supports "status" field
- `targetFieldValues` is the value that the field must reach for the SLA to be met and only supports one value.

```
{
  "content": {
    "sla": {
      "slaInputConfiguration": {
        "name": "Resolution SLA",
        "targetSlaMinutes": 10,
        "type": "CaseField",
        "fieldId": "status",
        "targetFieldValues": [
          {
            "stringValue": "closed"
          }
        ]
      }
    }
  },
  "type": "Sla"
}
```

Type: File

Request:

```
{
  "content": {
    "file": {
      "fileArn": "[fileArn]"
    }
  },
  "type": "File"
}
```

Type: Contact

Request to associate a customer contact with a case:

```
{
  "content": {
    "contact": {
      "contactArn": "[contactArn]"
    }
  },
```

```
  "type": "Contact"
}
```

Type: Custom

Request to associate a custom defined related item with a case:

> **Note**
>
> System case fields cannot be used in a custom related item.

```
{
  "content": {
    "custom": {
        "fields": [
            {
            "id": "[field_id_1]",
            "value": {
                "stringValue": "Billing"
                },
            {
            "id": "[field_id_2]",
            "value": {
                "stringValue": "Incorrect Shipping Address"
                }
            }
        ],
    }
  },
  "type": "Custom"
}
```

Type: ConnectCase

Request to associate another Amazon Connect case with a case:

```
{
  "content": {
    "connectCase": {
      "caseId": "[caseId]"
    }
```

```
  },
  "type": "ConnectCase"
}
```

CreateRelatedItem Response example

All successful CreateRelatedItem requests return the same response structure:

```
{
  "relatedItemArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/case/
[case_id]/related-item/[related_item_id]",
  "relatedItemId": "[related_item_id]"
}
```

CreateTemplate

Service: Amazon Connect Cases

Creates a template in the Cases domain. This template is used to define the case object model (that is, to define what data can be captured on cases) in a Cases domain. A template must have a unique name within a domain, and it must reference existing field IDs and layout IDs. Additionally, multiple fields with same IDs are not allowed within the same Template. A template can be either Active or Inactive, as indicated by its status. Inactive templates cannot be used to create cases.

Other template APIs are:

- DeleteTemplate
- GetTemplate
- ListTemplates
- UpdateTemplate

Request Syntax

```
POST /domains/domainId/templates HTTP/1.1
Content-type: application/json

{
   "description": "string",
   "layoutConfiguration": {
      "defaultLayout": "string"
   },
   "name": "string",
   "requiredFields": [
      {
         "fieldId": "string"
      }
   ],
   "rules": [
      {
         "caseRuleId": "string",
         "fieldId": "string"
      }
   ],
   "status": "string",
   "tagPropagationConfigurations": [
```

```
      {
         "resourceType": "string",
         "tagMap": {
            "string" : "string"
         }
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

description

A brief description of the template.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

layoutConfiguration

Configuration of layouts associated to the template.

Type: LayoutConfiguration object

Required: No

name

A name for the template. It must be unique per domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: Yes

requiredFields

A list of fields that must contain a value for a case to be successfully created with this template.

Type: Array of RequiredField objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: No

rules

A list of case rules (also known as case field conditions) on a template.

Type: Array of TemplateRule objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

status

The status of the template.

Type: String

Valid Values: `Active | Inactive`

Required: No

tagPropagationConfigurations

Defines tag propagation configuration for resources created within a domain. Tags specified here will be automatically applied to resources being created for the specified resource type.

Type: Array of TagPropagationConfiguration objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "templateArn": "string",
   "templateId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

templateArn

The Amazon Resource Name (ARN) of the newly created template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

templateId

A unique identifier of a template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of CreateTemplate.

```
{
  "name": "Shipping",
  "layoutConfiguration": {
    "defaultLayout": "[layout_id]"
    },
  "requiredFields": [
    {
    "fieldId": "[field_id]"
    }
  ],
  "description": "This is an example template for shipping issues",
  "status": "Inactive",
  "tagPropagationConfigurations": [
    {
      "resourceType": "Cases",
      "tagMap": {
        "Department" : "Shipping"
      }
    }
  ]
}
```

```
{
  "templateArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/template/
[template_id]",
```

```
  "templateId": "[template_id]"
}
```

DeleteCase

Service: Amazon Connect Cases

The DeleteCase API permanently deletes a case and all its associated resources from the cases data store. After a successful deletion, you cannot:

- Retrieve related items
- Access audit history
- Perform any operations that require the CaseID

> **Important**
>
> This action is irreversible. After you delete a case, you cannot recover its data.

Request Syntax

```
DELETE /domains/domainId/cases/caseId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

A unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

- AWS SDK for Ruby V3

DeleteCaseRule

Service: Amazon Connect Cases

Deletes a case rule. In the Amazon Connect admin website, case rules are known as *case field conditions*. For more information about case field conditions, see Add case field conditions to a case template.

Request Syntax

```
DELETE /domains/domainId/case-rules/caseRuleId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

caseRuleId

Unique identifier of a case rule.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

Unique identifier of a Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

DeleteDomain

Service: Amazon Connect Cases

Deletes a Cases domain.

> **Note**
>
> After deleting your domain you must disassociate the deleted domain from your Amazon Connect instance with another API call before being able to use Cases again with this Amazon Connect instance. See DeleteIntegrationAssociation.

Request Syntax

```
DELETE /domains/domainId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

DeleteField

Service: Amazon Connect Cases

Deletes a field from a cases template.

After a field is deleted:

- You can still retrieve the field by calling `BatchGetField`.
- You cannot update a deleted field by calling `UpdateField`; it throws a `ValidationException`.
- Deleted fields are not included in the `ListFields` response.
- Calling `CreateCase` with a deleted field throws a `ValidationException` denoting which field identifiers in the request have been deleted.
- Calling `GetCase` with a deleted field identifier returns the deleted field's value if one exists.
- Calling `UpdateCase` with a deleted field ID throws a `ValidationException` if the case does not already contain a value for the deleted field. Otherwise it succeeds, allowing you to update or remove (using `emptyValue: {}`) the field's value from the case.
- `GetTemplate` does not return field IDs for deleted fields.
- `GetLayout` does not return field IDs for deleted fields.
- Calling `SearchCases` with the deleted field ID as a filter returns any cases that have a value for the deleted field that matches the filter criteria.
- Calling `SearchCases` with a `searchTerm` value that matches a deleted field's value on a case returns the case in the response.
- Calling `BatchPutFieldOptions` with a deleted field ID throw a `ValidationException`.
- Calling `GetCaseEventConfiguration` does not return field IDs for deleted fields.

Request Syntax

```
DELETE /domains/domainId/fields/fieldId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

fieldId

Unique identifier of the field.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

DeleteLayout

Service: Amazon Connect Cases

Deletes a layout from a cases template. You can delete up to 100 layouts per domain.

After a layout is deleted:

- You can still retrieve the layout by calling `GetLayout`.
- You cannot update a deleted layout by calling `UpdateLayout`; it throws a `ValidationException`.
- Deleted layouts are not included in the `ListLayouts` response.

Request Syntax

```
DELETE /domains/domainId/layouts/layoutId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

layoutId

The unique identifier of the layout.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

DeleteRelatedItem

Service: Amazon Connect Cases

Deletes the related item resource under a case.

> **Note**
>
> This API cannot be used on a FILE type related attachment. To delete this type of file, use the DeleteAttachedFile API

Request Syntax

```
DELETE /domains/domainId/cases/caseId/related-items/relatedItemId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

A unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

relatedItemId

A unique identifier of a related item.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

DeleteTemplate

Service: Amazon Connect Cases

Deletes a cases template. You can delete up to 100 templates per domain.

After a cases template is deleted:

- You can still retrieve the template by calling `GetTemplate`.
- You cannot update the template.
- You cannot create a case by using the deleted template.
- Deleted templates are not included in the `ListTemplates` response.

Request Syntax

```
DELETE /domains/domainId/templates/templateId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

templateId

A unique identifier of a template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

GetCase

Service: Amazon Connect Cases

Returns information about a specific case if it exists.

Request Syntax

```
POST /domains/domainId/cases/caseId HTTP/1.1
Content-type: application/json

{
   "fields": [
      {
         "id": "string"
      }
   ],
   "nextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

fields

A list of unique field identifiers.

Type: Array of FieldIdentifier objects

Array Members: Minimum number of 1 item. Maximum number of 220 items.

Required: Yes

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "fields": [
      {
         "id": "string",
         "value": { ... }
      }
   ],
   "nextToken": "string",
   "tags": {
      "string" : "string"
   },
   "templateId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

fields

A list of detailed field information.

Type: Array of FieldValue objects

Array Members: Minimum number of 0 items. Maximum number of 220 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

templateId

A unique identifier of a template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of GetCase.

```
{
  "fields": [
  {
    "id": "title"
  },
  {
```

```
  "id": "status"
  }
 ]
}
```

```
{
  "fields": [
    {
      "id": "title",
      "value": {
         "stringValue": "Incorrect Shipping Address"
          }
     },
     {
      "id": "status",
      "value": {
         "stringValue": "Open"
          }
     }
  ],
  "templateId": "[template_id]",
  "tags": {},
  "nextToken": [nextToken]
}
```

GetCaseAuditEvents

Service: Amazon Connect Cases

Returns the audit history about a specific case if it exists.

Request Syntax

```
POST /domains/domainId/cases/caseId/audit-history HTTP/1.1
Content-type: application/json

{
   "maxResults": number,
   "nextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

maxResults

The maximum number of audit events to return. When no value is provided, 25 is the default.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 25.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "auditEvents": [
      {
         "eventId": "string",
         "fields": [
            {
               "eventFieldId": "string",
               "newValue": { ... },
               "oldValue": { ... }
            }
         ],
         "performedBy": {
            "iamPrincipalArn": "string",
            "user": { ... }
         },
         "performedTime": "string",
         "relatedItemType": "string",
         "type": "string"
      }
   ],
   "nextToken": "string"
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

auditEvents

A list of case audits where each represents a particular edit of the case.

Type: Array of AuditEvent objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

GetCaseEventConfiguration

Service: Amazon Connect Cases

Returns the case event publishing configuration.

Request Syntax

```
POST /domains/domainId/case-event-configuration HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "eventBridge": {
      "enabled": boolean,
      "includedData": {
         "caseData": {
            "fields": [
               {
                  "id": "string"
               }
            ]
         },
```

```
            "relatedItemData": {
               "includeContent": boolean
            }
         }
      }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

eventBridge

Configuration to enable EventBridge case event delivery and determine what data is delivered.

Type: EventBridgeConfiguration object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of GetCaseEventConfiguration.

```
{ }
```

```
{
  "enabled":true,
  "includedData":{
   "caseData":{
   "fields":[
    {
    "id":"status"
    },
    {
    "id":"title"
    },
    {
    "id":"customer_id"
```

```
    },
    {
    "id":"case_reason"
    }
   ]
  },
  "relatedItemData":{
  "includeContent":true
  }
 }
}
```

GetDomain

Service: Amazon Connect Cases

Returns information about a specific domain if it exists.

Request Syntax

```
POST /domains/domainId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "createdTime": "string",
   "domainArn": "string",
   "domainId": "string",
   "domainStatus": "string",
   "name": "string",
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

createdTime

The timestamp when the Cases domain was created.

Type: Timestamp

domainArn

The Amazon Resource Name (ARN) for the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

domainId

The unique identifier of the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

domainStatus

The status of the Cases domain.

Type: String

Valid Values: `Active | CreationInProgress | CreationFailed`

name

The name of the Cases domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of GetDomain.

```
{ }
```

```
{
  "createdAt": "2021-03-05T21:25:30.261392Z",
  "domainArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]",
  "domainId": "[domain_id]",
  "domainStatus": "Active",
  "name": "Demo Domain",
  "tags": {}
}
```

GetLayout

Service: Amazon Connect Cases

Returns the details for the requested layout.

Request Syntax

```
POST /domains/domainId/layouts/layoutId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

layoutId

The unique identifier of the layout.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "content": { ... },
   "createdTime": "string",
   "deleted": boolean,
```

```
   "lastModifiedTime": "string",
   "layoutArn": "string",
   "layoutId": "string",
   "name": "string",
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

content

Information about which fields will be present in the layout, the order of the fields, and read-only attribute of the field.

Type: LayoutContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

createdTime

Timestamp at which the resource was created.

Type: Timestamp

deleted

Denotes whether or not the resource has been deleted.

Type: Boolean

lastModifiedTime

Timestamp at which the resource was created or last modified.

Type: Timestamp

layoutArn

The Amazon Resource Name (ARN) of the newly created layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

layoutId

The unique identifier of the layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

name

The name of the layout. It must be unique.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

Following is an example of a content attribute.

```
{ }
```

```
{
  "name": "My layout",
  "content": {
  "basic": {
    "topPanel": {
      "sections": [
      {
        "fieldGroup": {
        "fields": [
          {
```

```
          "editable": false,
          "fieldId": "[field_id_1]"
          },
          {
          "editable": false,
          "fieldId": "[field_id_2]"
          }
         ]
       }
     }
    ]
  },
  "moreInfo": {
  "sections": [
      {
      "fieldGroup": {
        "name": "Address",
        "fields": [
          {
          "editable": false,
          "fieldId": "[field_id_3]"
          },
          {
          "editable": false,
          "fieldId": "[field_id_4]"
          }
         ]
        }
       }
      ]
     }
    }
  },
  "layoutArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/layout/
[layout_id]",
  "layoutId": "[layout_id]",
  "tags": {}
}
```

GetTemplate

Service: Amazon Connect Cases

Returns the details for the requested template. Other template APIs are:

- CreateTemplate
- DeleteTemplate
- ListTemplates
- UpdateTemplate

Request Syntax

```
POST /domains/domainId/templates/templateId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

templateId

A unique identifier of a template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "createdTime": "string",
   "deleted": boolean,
   "description": "string",
   "lastModifiedTime": "string",
   "layoutConfiguration": {
      "defaultLayout": "string"
   },
   "name": "string",
   "requiredFields": [
      {
         "fieldId": "string"
      }
   ],
   "rules": [
      {
         "caseRuleId": "string",
         "fieldId": "string"
      }
   ],
   "status": "string",
   "tagPropagationConfigurations": [
      {
         "resourceType": "string",
         "tagMap": {
            "string" : "string"
         }
      }
   ],
   "tags": {
      "string" : "string"
   },
   "templateArn": "string",
   "templateId": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

createdTime

Timestamp at which the resource was created.

Type: Timestamp

deleted

Denotes whether or not the resource has been deleted.

Type: Boolean

description

A brief description of the template.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

lastModifiedTime

Timestamp at which the resource was created or last modified.

Type: Timestamp

layoutConfiguration

Configuration of layouts associated to the template.

Type: LayoutConfiguration object

name

The name of the template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

requiredFields

A list of fields that must contain a value for a case to be successfully created with this template.

Type: Array of RequiredField objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

rules

A list of case rules (also known as case field conditions) on a template.

Type: Array of TemplateRule objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

status

The status of the template.

Type: String

Valid Values: `Active | Inactive`

tagPropagationConfigurations

Defines tag propagation configuration for resources created within a domain. Tags specified here will be automatically applied to resources being created for the specified resource type.

Type: Array of TagPropagationConfiguration objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

templateArn

The Amazon Resource Name (ARN) of the template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

templateId

A unique identifier of a template.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of GetTemplate.

```
{ }
```

```
{
  "templateId": "[template_id]",
  "templateArn": "[template_arn]",
  "name": "Shipping",
  "layoutConfiguration": {
  "defaultLayout": "[layout_id]"
    },
  "requiredFields": [
    {
    "fieldId": "[field_id]"
    }
  ],
  "description": "This is an example template for shipping issues",
  "status": "Inactive",
  "tagPropagationConfigurations": [
    {
      "resourceType": "Cases",
      "tagMap": {
        "Department" : "Shipping"
      }
    }
  ]
}
```

ListCaseRules

Service: Amazon Connect Cases

Lists all case rules in a Cases domain. In the Amazon Connect admin website, case rules are known as *case field conditions*. For more information about case field conditions, see Add case field conditions to a case template.

Request Syntax

```
POST /domains/domainId/rules-list/?maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

Unique identifier of a Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "caseRules": [
      {
         "caseRuleArn": "string",
         "caseRuleId": "string",
         "description": "string",
         "name": "string",
         "ruleType": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

caseRules

A list of field summary objects.

Type: Array of CaseRuleSummary objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

ListCasesForContact

Service: Amazon Connect Cases

Lists cases for a given contact.

Request Syntax

```
POST /domains/domainId/list-cases-for-contact HTTP/1.1
Content-type: application/json

{
   "contactArn": "string",
   "maxResults": number,
   "nextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

contactArn

A unique identifier of a contact in Amazon Connect.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 10.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "cases": [
      {
         "caseId": "string",
         "templateId": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

cases

A list of Case summary information.

Type: Array of CaseSummary objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListCasesForContact.

```
{
  "contactArn": "arn:aws:connect:us-west-2:[account_id]:instance/[connect_instance_id]/
contact/[contact_id]",
  "maxResults": 10
}
```

```
{
  "cases": [
    {
      "caseId": "[case_id_1]",
      "templateId": "[template_id_1]"
    },
    {
      "caseId": "[case_id_2]",
      "templateId": "[template_id_2]"
      },
      {
      "caseId": "[case_id_3]",
```

```
      "templateId": "[template_id_3]"
      }
    ]
  "nextToken": null
}
```

ListDomains

Service: Amazon Connect Cases

Lists all cases domains in the AWS account. Each list item is a condensed summary object of the domain.

Request Syntax

```
POST /domains-list?maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 10.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "domains": [
      {
         "domainArn": "string",
         "domainId": "string",
```

```
            "name": "string"
        }
    ],
    "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

domains

The Cases domain.

Type: Array of DomainSummary objects

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListDomains.

```
{ }
```

```
{
"domains": [
  {
    "domainArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]",
    "domainId": "[domain_id]",
    "name": "[domain_name]"
  }
]
"nextToken": [nextToken]
}
```

ListFieldOptions

Service: Amazon Connect Cases

Lists all of the field options for a field identifier in the domain.

Request Syntax

```
POST /domains/domainId/fields/fieldId/options-list?
maxResults=maxResults&nextToken=nextToken&values=values HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

fieldId

The unique identifier of a field.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

values

A list of `FieldOption` values to filter on for `ListFieldOptions`.

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Length Constraints: Minimum length of 0. Maximum length of 100.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "nextToken": "string",
   "options": [
      {
         "active": boolean,
         "name": "string",
         "value": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

options

A list of `FieldOption` objects.

Type: Array of FieldOption objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListFieldOptions.

```
{ }
```

```
{
  "nextToken": [nextToken],
  "options": [
     {
     "active": true,
     "name": "California",
     "value": "CA"
     },
     {
     "active": true,
     "name": "Washington",
     "value": "WA"
     },
     {
     "active": true,
     "name": "New York",
     "value": "NY"
     },
     {
     "active": false,
     "name": "Massachusetts",
     "value": "MA"
     }
  ]
}
```

ListFields

Service: Amazon Connect Cases

Lists all fields in a Cases domain.

Request Syntax

```
POST /domains/domainId/fields-list?maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "fields": [
      {
         "attributes": { ... },
         "fieldArn": "string",
         "fieldId": "string",
         "name": "string",
         "namespace": "string",
         "type": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

fields

List of detailed field information.

Type: Array of FieldSummary objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListFields.

```
{ }
```

```
{
  "fields": [
  {
    "fieldId": "[field_id]",
    "fieldArn": "[field_arn]",
    "name": "Color",
    "type": "Text",
    "namespace": "Custom",
    "tags": {}
    }
   ],
   "nextToken": [nextToken]
}
```

ListLayouts

Service: Amazon Connect Cases

Lists all layouts in the given cases domain. Each list item is a condensed summary object of the layout.

Request Syntax

```
POST /domains/domainId/layouts-list?maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "layouts": [
      {
         "layoutArn": "string",
         "layoutId": "string",
         "name": "string"
      }
   ],
   "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

layouts

The layouts for the domain.

Type: Array of LayoutSummary objects

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListLayouts.

```
{ }
```

```
{
  "layouts": [
    {
      "layoutArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/layout/
[layout_id]",
      "layoutId": "[layout_id]",
      "name": "[layout_name]"
    }
  ],
  "nextToken": "[nextToken]"
}
```

ListTagsForResource

Service: Amazon Connect Cases

Lists tags for a resource.

Request Syntax

```
GET /tags/arn HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN)

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListTagsForResource.

```
{ }
```

```
{
  "tags": {
  "some_key": "some_value"
  }
}
```

ListTemplates

Service: Amazon Connect Cases

Lists all of the templates in a Cases domain. Each list item is a condensed summary object of the template.

Other template APIs are:

- CreateTemplate
- DeleteTemplate
- GetTemplate
- UpdateTemplate

Request Syntax

```
POST /domains/domainId/templates-list?
maxResults=maxResults&nextToken=nextToken&status=status HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

maxResults

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 100.

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Length Constraints: Minimum length of 0. Maximum length of 9000.

status

A list of status values to filter on.

Array Members: Minimum number of 1 item. Maximum number of 2 items.

Valid Values: `Active | Inactive`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "nextToken": "string",
   "templates": [
      {
         "name": "string",
         "status": "string",
         "tagPropagationConfigurations": [
            {
               "resourceType": "string",
               "tagMap": {
                  "string" : "string"
               }
            }
         ],
         "templateArn": "string",
         "templateId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

templates

List of template summary objects.

Type: Array of TemplateSummary objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of ListTemplates.

```
{ }
```

```
{
  "templates":[
  {
    "name":"Test",
    "templateArn":"arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/template/
[template_id]",
    "templateId":"[template_id]",
    "status": "Active",
    "tagPropagationConfigurations": [
      {
        "resourceType": "Cases",
        "tagMap": {
          "Department" : "Support"
        }
      }
    ]
  }
```

```
  ],
  "nextToken":"[nextToken]"
}
```

PutCaseEventConfiguration

Service: Amazon Connect Cases

Adds case event publishing configuration. For a complete list of fields you can add to the event message, see Create case fields in the *Amazon Connect Administrator Guide*

Request Syntax

```
PUT /domains/domainId/case-event-configuration HTTP/1.1
Content-type: application/json

{
   "eventBridge": {
      "enabled": boolean,
      "includedData": {
         "caseData": {
            "fields": [
               {
                  "id": "string"
               }
            ]
         },
         "relatedItemData": {
            "includeContent": boolean
         }
      }
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

eventBridge

Configuration to enable EventBridge case event delivery and determine what data is delivered.

Type: EventBridgeConfiguration object

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one use of PutCaseEventConfiguration.

```
{
  "enabled":true,
  "includedData":{
    "caseData":{
      "fields":[
        {
```

```
        "id":"status"
        },
        {
        "id":"title"
        },
        {
        "id":"customer_id"
        },
        {
        "id":"case_reason"
        }
        ]
    },
   "relatedItemData":{
       "includeContent":true
    }
  }}
```

```
{ }
```

SearchAllRelatedItems

Service: Amazon Connect Cases

Searches for related items across all cases within a domain. This is a global search operation that returns related items from multiple cases, unlike the case-specific SearchRelatedItems API.

Use cases

Following are common uses cases for this API:

- Find cases with similar issues across the domain. For example, search for all cases containing comments about "product defect" to identify patterns and existing solutions.
- Locate all cases associated with specific contacts or orders. For example, find all cases linked to a contactArn to understand the complete customer journey.
- Monitor SLA compliance across cases. For example, search for all cases with "Active" SLA status to prioritize remediation efforts.

Important things to know

- This API returns case identifiers, not complete case objects. To retrieve full case details, you must make additional calls to the GetCase API for each returned case ID.
- This API searches across related items content, not case fields. Use the SearchCases API to search within case field values.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
POST /domains/domainId/related-items-search HTTP/1.1
Content-type: application/json

{
   "filters": [
      { ... }
   ],
   "maxResults": number,
   "nextToken": "string",
   "sorts": [
      {
```

```
            "sortOrder": "string",
            "sortProperty": "string"
        }
    ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

filters

The list of types of related items and their parameters to use for filtering. The filters work as an OR condition: caller gets back related items that match any of the specified filter types.

Type: Array of RelatedItemTypeFilter objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Required: No

maxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 25.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

sorts

A structured set of sort terms to specify the order in which related items should be returned. Supports sorting by association time or case ID. The sorts work in the order specified: first sort term takes precedence over subsequent terms.

Type: Array of SearchAllRelatedItemsSort objects

Array Members: Minimum number of 0 items. Maximum number of 2 items.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "nextToken": "string",
   "relatedItems": [
      {
         "associationTime": "string",
         "caseId": "string",
         "content": { ... },
         "performedBy": { ... },
         "relatedItemId": "string",
         "tags": {
            "string" : "string"
         },
         "type": "string"
      }
   ]
```

```
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

relatedItems

A list of items related to a case.

Type: Array of SearchAllRelatedItemsResponseItem objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Example request to search for all contact-type related items

The following example shows how to search for all contact-type related items across cases in a domain, filtering by a specific contactArn and sorting results by association time in descending order, then by case ID in descending order.

```
{
  "sorts": [
    {
      "sortProperty": "AssociationTime",
      "sortOrder": "Desc"
    },
    {
      "sortProperty": "CaseId",
      "sortOrder": "Desc"
    }
```

```
  ],
  "maxResults": 10,
  "filters": [
    {
      "contact": {
        "contactArn": "arn:aws:connect:us-west-2:[account-id]:instance/[instance-id]/
contact/[contact-id]"
      }
    }
  ]
}
```

Example response for a successful search

The following example shows a successful search returning two contact-type related items from different cases, each with their associated case identifiers, contact details, and metadata sorted by most recent association time first.

```
{
  "nextToken": null,
  "relatedItems": [
    {
      "associationTime": "2025-05-16T13:18:37.608074706Z",
      "caseId": "[case-id-1]",
      "content": {
        "contact": {
          "contactArn": "arn:aws:connect:us-west-2:[account-id]:instance/[instance-id]/
contact/[contact-id]",
          "channel": "VOICE",
          "connectedToSystemTime": "2025-05-16T13:18:30.000000000Z"
        }
      },
      "performedBy": null,
      "relatedItemId": "[related-item-id-1]",
      "tags": {
        "Company": "AWS",
        "Team": "Connect"
      },
      "type": "Contact"
    },
    {
      "associationTime": "2025-05-16T13:18:19.270469991Z",
      "caseId": "[case-id-2]",
```

```
      "content": {
        "contact": {
          "contactArn": "arn:aws:connect:us-west-2:[account-id]:instance/[instance-id]/
contact/[contact-id]",
          "channel": "CHAT",
          "connectedToSystemTime": "2025-05-16T13:18:15.000000000Z"
        }
      },
      "performedBy": null,
      "relatedItemId": "[related-item-id-2]",
      "tags": {},
      "type": "Contact"
    }
  ]
}
```

SearchCases

Service: Amazon Connect Cases

Searches for cases within their associated Cases domain. Search results are returned as a paginated list of abridged case documents.

> **Note**
>
> For `customer_id` you must provide the full customer profile ARN in this format: `arn:aws:profile:your AWS Region:your AWS account ID:domains/profiles domain name/profiles/profile ID`.

Request Syntax

```
POST /domains/domainId/cases-search HTTP/1.1
Content-type: application/json

{
   "fields": [
      {
         "id": "string"
      }
   ],
   "filter": { ... },
   "maxResults": number,
   "nextToken": "string",
   "searchTerm": "string",
   "sorts": [
      {
         "fieldId": "string",
         "sortOrder": "string"
      }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

fields

The list of field identifiers to be returned as part of the response.

Type: Array of FieldIdentifier objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Required: No

filter

A list of filter objects.

Type: CaseFilter object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

maxResults

The maximum number of cases to return. When no value is provided, 25 is the default.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

searchTerm

A word or phrase used to perform a quick search.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

sorts

A list of sorts where each sort specifies a field and their sort order to be applied to the results.

Type: Array of Sort objects

Array Members: Minimum number of 0 items. Maximum number of 2 items.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "cases": [
      {
         "caseId": "string",
         "fields": [
            {
               "id": "string",
               "value": { ... }
            }
         ],
         "tags": {
            "string" : "string"
         },
         "templateId": "string"
```

```
      }
   ],
   "nextToken": "string",
   "totalCount": number
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

cases

A list of case documents where each case contains the properties `CaseId` and `Fields` where each field is a complex union structure.

Type: Array of SearchCasesResponseItem objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

totalCount

The total number of cases that matched the search criteria.

Type: Long

Valid Range: Minimum value of 0.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request example

This example illustrates one usage of SearchCases.

```
{
   "filter":{
      "andAll":[
```

```
         {
            "field":{
               "equalTo":{
                  "id":"title",
                  "value":{
                     "stringValue":"Forward Web Engineer"
                  }
               }
            }
         },
         {
            "not":{
               "field":{
                  "greaterThan":{
                     "id":"customer_age",
                     "value":{
                        "doubleValue":38
                     }
                  }
               }
            }
         }
      ]
   },
   "fields":[
      {
         "id":"title"
      }
   ],
   "maxResults":10,
   "nextToken":null,
   "sorts":[
      {
         "fieldId":"created_datetime",
         "sortOrder":"Asc"
      }
   ]
}
```

Response example

This example illustrates one usage of SearchCases.

```
{
```

```
   "cases":[
      {
         "caseId":"[case_id_1]",
         "fields":[
            {
               "id":"title",
               "value":{
                  "stringValue":"Forward Web Engineer-1"
               }
            }
         ],
         "tags":{

         },
         "templateId":"[template_id]"
      },
      {
         "caseId":"[case_id_2]",
         "fields":[
            {
               "id":"title",
               "value":{
                  "stringValue":"Forward Web Engineer-2"
               }
            }
         ],
         "tags":{

         },
         "templateId":"[template_id]"
      },
      {
         "caseId":"[case_id_3]",
         "fields":[
            {
               "id":"title",
               "value":{
                  "stringValue":"Forward Web Engineer-3"
               }
            }
         ],
         "tags":{

         },
```

```
            "templateId":"[template_id]"
        }
    ],
    "nextToken":"[nextToken]"
}
```

SearchRelatedItems

Service: Amazon Connect Cases

Searches for related items that are associated with a case.

> **Note**
>
> If no filters are provided, this returns all related items associated with a case.

Request Syntax

```
POST /domains/domainId/cases/caseId/related-items-search HTTP/1.1
Content-type: application/json

{
   "filters": [
      { ... }
   ],
   "maxResults": number,
   "nextToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

filters

The list of types of related items and their parameters to use for filtering.

Type: Array of RelatedItemTypeFilter objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Required: No

maxResults

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 25.

Required: No

nextToken

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "nextToken": "string",
   "relatedItems": [
      {
```

```
            "associationTime": "string",
            "content": { ... },
            "performedBy": { ... },
            "relatedItemId": "string",
            "tags": {
               "string" : "string"
            },
            "type": "string"
         }
      ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken

The token for the next set of results. This is null if there are no more results to return.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 9000.

relatedItems

A list of items related to a case.

Type: Array of SearchRelatedItemsResponseItem objects

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of SearchRelatedItems.

```
{
  "maxResults": 25,
  "filters": [
```

```
  {
    "contact": {
      "contactArn": "arn:aws:connect:us-west-2:[account_id]:instance/
[connect_instance_id]/contact/[contact_id]"
      }
    }
  ]
}
```

```
{
  "nextToken": null,
  "relatedItems": [
    {
    "associationTime": "2022-06-06T18:59:09.865709Z",
    "content": {
      "contact": {
      "channel": "CHAT",
      "connectedToSystemTime": "2022-06-08T18:57:50.558897Z",
      "contactArn": "arn:aws:connect:us-west-2:[account_id]:instance/
[connect_instance_id]/contact/[contact_id]"
      }
    },
  "relatedItemId": "[relatedItem_id]",
  "tags": {},
  "type": "Contact"
   }
  ]
}
```

TagResource

Service: Amazon Connect Cases

Adds tags to a resource.

Request Syntax

```
POST /tags/arn HTTP/1.1
Content-type: application/json

{
   "tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN)

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of TagResource.

```
{
  "tags": {
  "some_key": "some_value"
  }
}
```

```
{ }
```

UntagResource

Service: Amazon Connect Cases

Untags a resource.

Request Syntax

```
DELETE /tags/arn?tagKeys=tagKeys HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

arn

The Amazon Resource Name (ARN)

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

tagKeys

List of tag keys.

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: `(?!aws:)[a-zA-Z+-=._:/]+`

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

UpdateCase

Service: Amazon Connect Cases

> **Note**
>
> If you provide a value for `PerformedBy.UserArn` you must also have connect:DescribeUser permission on the User ARN resource that you provide

Updates the values of fields on a case. Fields to be updated are received as an array of id/value pairs identical to the `CreateCase` input .

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Request Syntax

```
PUT /domains/domainId/cases/caseId HTTP/1.1
Content-type: application/json

{
   "fields": [
      {
         "id": "string",
         "value": { ... }
      }
   ],
   "performedBy": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

fields

An array of objects with `fieldId` (matching ListFields/DescribeField) and value union data, structured identical to `CreateCase`.

Type: Array of FieldValue objects

Array Members: Minimum number of 0 items. Maximum number of 220 items.

Required: Yes

performedBy

Represents the entity that performed the action.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of UpdateCase.

```
{
  "fields": [
    {
      "id": "title",
      "value": {
        "stringValue": "New Title"
        }
      }
  ]
}
```

```
{ }
```

UpdateCaseRule

Service: Amazon Connect Cases

Updates a case rule. In the Amazon Connect admin website, case rules are known as *case field conditions*. For more information about case field conditions, see Add case field conditions to a case template.

Request Syntax

```
PUT /domains/domainId/case-rules/caseRuleId HTTP/1.1
Content-type: application/json

{
   "description": "string",
   "name": "string",
   "rule": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

caseRuleId

Unique identifier of a case rule.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

Unique identifier of a Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

description

Description of a case rule.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

name

Name of the case rule.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: No

rule

Represents what rule type should take place, under what conditions.

Type: CaseRuleDetails object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

UpdateField

Service: Amazon Connect Cases

Updates the properties of an existing field.

Request Syntax

```
PUT /domains/domainId/fields/fieldId HTTP/1.1
Content-type: application/json

{
   "attributes": { ... },
   "description": "string",
   "name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

fieldId

The unique identifier of a field.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

attributes

Union of field attributes.

Type: FieldAttributes object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

description

The description of a field.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

name

The name of the field.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of UpdateField.

```
{
  "name": "updated_field_name"
}
```

```
{ }
```

UpdateLayout

Service: Amazon Connect Cases

Updates the attributes of an existing layout.

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

A `ValidationException` is returned when you add non-existent `fieldIds` to a layout.

> **Note**
>
> Title and Status fields cannot be part of layouts because they are not configurable.

Request Syntax

```
PUT /domains/domainId/layouts/layoutId HTTP/1.1
Content-type: application/json

{
   "content": { ... },
   "name": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

layoutId

The unique identifier of the layout.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

content

Information about which fields will be present in the layout, the order of the fields.

Type: LayoutContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

name

The name of the layout. It must be unique per domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of UpdateLayout.

```
{
  "content": {
    "basic": {
      "moreInfo": {
        "sections": [
          {
          "fieldGroup": {
            "fields": [
              {
              "id": "created_datetime"
              },
              {
              "id": "case_id"
              }
            ]
           }
          }
         ]
      },
    "topPanel": {
      "sections": [
        {
        "fieldGroup": {
          "fields": [
            {
              "id": "summary"
               },
              {
              "id": "status"
              },
              {
```

```
              "id": "case_id"
              }
            ]
          }
        }
      ]
    }
  }
},
"name": "testLayout"
}
```

```
{ }

UpdateRelatedItem

Service: Amazon Connect Cases

Updates the content of a related item associated with a case. The following related item types are supported:

- **Comment** - Update the text content of an existing comment
- **Custom** - Update the fields of a custom related item. You can add, modify, and remove fields from a custom related item. There's a quota for the number of fields allowed in a Custom type related item. See Amazon Connect Cases quotas.

Important things to know

- When updating a Custom related item, all existing and new fields, and their associated values should be included in the request. Fields not included as part of this request will be removed.
- If you provide a value for `performedBy.userArn` you must also have DescribeUser permission on the ARN of the user that you provide.
- System case fields cannot be used in a custom related item.

Endpoints: See Amazon Connect endpoints and quotas.

Request Syntax

```
PUT /domains/domainId/cases/caseId/related-items/relatedItemId HTTP/1.1
Content-type: application/json

{
   "content": { ... },
   "performedBy": { ... }
}
```

URI Request Parameters

The request uses the following URI parameters.

caseId

A unique identifier of the case.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

relatedItemId

Unique identifier of a related item.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

content

The content of a related item to be updated.

Type: RelatedItemUpdateContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: Yes

performedBy

Represents the user who performed the update of the related item.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "associationTime": "string",
   "content": { ... },
   "createdBy": { ... },
   "lastUpdatedUser": { ... },
   "relatedItemArn": "string",
   "relatedItemId": "string",
   "tags": {
      "string" : "string"
   },
   "type": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

associationTime

Time at which the related item was associated with the case.

Type: Timestamp

content

Represents the content of the updated related item.

Type: RelatedItemContent object

Note: This object is a Union. Only one member of this object can be specified or returned.

createdBy

Represents the creator of the related item.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

lastUpdatedUser

Represents the last user that updated the related item.

Type: UserUnion object

Note: This object is a Union. Only one member of this object can be specified or returned.

relatedItemArn

The Amazon Resource Name (ARN) of the updated related item.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

relatedItemId

The unique identifier of the updated related item.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

tags

A map of of key-value pairs that represent tags on a resource. Tags are used to organize, track, or control access for this resource.

Type: String to string map

type

Type of the updated related item.

Type: String

Valid Values: `Contact | Comment | File | Sla | ConnectCase | Custom`

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

This section provides examples for updating supported related item types.

Update Comment related item

Request to update a comment's text and content type:

```
{
  "domainId": "[domain_id]",
  "caseId": "[case_id]",
  "relatedItemId": "[related_item_id]",
  "content": {
    "comment": {
      "body": "Updated comment text with additional details",
      "contentType": "Text/Plain"
    }
  }
}
```

Update Custom related item

Request to update field values in a custom related item:

> **Note**
>
> System case fields cannot be used in a custom related item.

```
{
  "domainId": "[domain_id]",
  "caseId": "[case_id]",
  "relatedItemId": "[related_item_id]",
  "content": {
    "custom": {
      "fields": [
        {
          "id": "[field_id_1]",
          "value": {
            "stringValue": "Updated value for first field"
          }
        },
        {
          "id": "[field_id_2]",
          "value": {
            "stringValue": "Updated value for second field"
          }
        },
        {
          "id": "[field_id_3]",
```

```
          "value": {
            "stringValue": "Existing value that remains unchanged"
          }
        }
      ]
    }
  }
}
```

Update with performedBy parameter

Request to update a comment and specify who performed the update:

```
{
  "domainId": "[domain_id]",
  "caseId": "[case_id]",
  "relatedItemId": "[related_item_id]",
  "content": {
    "comment": {
      "body": "Updated comment text with additional details",
      "contentType": "Text/Plain"
    }
  },
  "performedBy": {
    "userArn": "arn:aws:connect:us-west-2:[account_id]:instance/[instance_id]/agent/
[agent_id]"
  }
}
```

UpdateRelatedItem Response example

All successful UpdateRelatedItem requests return the updated related item:

```
{
  "relatedItemArn": "arn:aws:cases:us-west-2:[account_id]:domain/[domain_id]/case/
[case_id]/related-item/[related_item_id]",
  "relatedItemId": "[related_item_id]",
  "type": "Comment",
  "content": {
    "comment": {
      "body": "Updated comment text with additional details",
      "contentType": "Text/Plain"
    }
```

```
  },
  "associationTime": "2024-11-22T01:35:46.329Z",
  "lastUpdatedUser": {
    "userArn": "arn:aws:connect:us-west-2:[account_id]:instance/[instance_id]/agent/
[agent_id]"
  },
  "createdBy": {
    "userArn": "arn:aws:connect:us-west-2:[account_id]:instance/[instance_id]/agent/
[agent_id]"
  }
}
```

UpdateTemplate

Service: Amazon Connect Cases

Updates the attributes of an existing template. The template attributes that can be modified include `name`, `description`, `layoutConfiguration`, `requiredFields`, and `status`. At least one of these attributes must not be null. If a null value is provided for a given attribute, that attribute is ignored and its current value is preserved.

Other template APIs are:

- CreateTemplate
- DeleteTemplate
- GetTemplate
- ListTemplates

Request Syntax

```
PUT /domains/domainId/templates/templateId HTTP/1.1
Content-type: application/json

{
   "description": "string",
   "layoutConfiguration": {
      "defaultLayout": "string"
   },
   "name": "string",
   "requiredFields": [
      {
         "fieldId": "string"
      }
   ],
   "rules": [
      {
         "caseRuleId": "string",
         "fieldId": "string"
      }
   ],
   "status": "string",
   "tagPropagationConfigurations": [
      {
```

```
            "resourceType": "string",
            "tagMap": {
               "string" : "string"
            }
         }
   ]
}
```

URI Request Parameters

The request uses the following URI parameters.

domainId

The unique identifier of the Cases domain.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

templateId

A unique identifier for the template.

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Request Body

The request accepts the following data in JSON format.

description

A brief description of the template.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

layoutConfiguration

Configuration of layouts associated to the template.

Type: LayoutConfiguration object

Required: No

name

The name of the template. It must be unique per domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: `.*[\S]`

Required: No

requiredFields

A list of fields that must contain a value for a case to be successfully created with this template.

Type: Array of RequiredField objects

Array Members: Minimum number of 0 items. Maximum number of 100 items.

Required: No

rules

A list of case rules (also known as case field conditions) on a template.

Type: Array of TemplateRule objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

status

The status of the template.

Type: String

Valid Values: `Active | Inactive`

Required: No

tagPropagationConfigurations

Defines tag propagation configuration for resources created within a domain. Tags specified here will be automatically applied to resources being created for the specified resource type.

Type: Array of TagPropagationConfiguration objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation would cause a conflict with the current state of a service resource associated with the request. Resolve the conflict before retrying this request. See the accompanying error message for details.

HTTP Status Code: 409

InternalServerException

We couldn't process your request because of an issue with the server. Try again later.

retryAfterSeconds

Advice to clients on when the call can be safely retried.

HTTP Status Code: 500

ResourceNotFoundException

We couldn't find the requested resource. Check that your resources exists and were created in the same AWS Region as your request, and try your request again.

resourceId

Unique identifier of the resource affected.

resourceType

Type of the resource affected.

HTTP Status Code: 404

ServiceQuotaExceededException

The service quota has been exceeded. For a list of service quotas, see Amazon Connect Service Quotas in the *Amazon Connect Administrator Guide*.

HTTP Status Code: 402

ThrottlingException

The rate has been exceeded for this API. Please try again after a few minutes.

HTTP Status Code: 429

ValidationException

The request isn't valid. Check the syntax and try again.

HTTP Status Code: 400

Examples

Request and Response example

This example illustrates one usage of UpdateTemplate.

```
{
  "name": "updated_template_name",
  "tagPropagationConfigurations": [
```

```
    {
      "resourceType": "Cases",
      "tagMap": {
        "Department" : "UpdatedShipping"
      }
    }
  ]
}
```

```
{ }
```

Amazon Connect Participant Service

The following actions are supported by Amazon Connect Participant Service:

- CancelParticipantAuthentication
- CompleteAttachmentUpload
- CreateParticipantConnection
- DescribeView

- DisconnectParticipant
- GetAttachment
- GetAuthenticationUrl
- GetTranscript
- SendEvent
- SendMessage
- StartAttachmentUpload

CancelParticipantAuthentication

Service: Amazon Connect Participant Service

Cancels the authentication session. The opted out branch of the Authenticate Customer flow block will be taken.

> **Note**
>
> The current supported channel is chat. This API is not supported for Apple Messages for Business, WhatsApp, or SMS chats.

> **Note**
>
> `ConnectionToken` is used for invoking this API instead of `ParticipantToken`.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/cancel-authentication HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "SessionId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

SessionId

The `sessionId` provided in the `authenticationInitiated` event.

Type: String

Length Constraints: Fixed length of 36.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

See Also

- AWS Command Line Interface V2
- AWS SDK for .NET V4
- AWS SDK for C++
- AWS SDK for Go v2
- AWS SDK for Java V2
- AWS SDK for JavaScript V3
- AWS SDK for Kotlin
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3

CompleteAttachmentUpload

Service: Amazon Connect Participant Service

Allows you to confirm that the attachment has been uploaded using the pre-signed URL provided in StartAttachmentUpload API. A conflict exception is thrown when an attachment with that identifier is already being uploaded.

For security recommendations, see Amazon Connect Chat security best practices.

> **Note**
>
> ConnectionToken is used for invoking this API instead of ParticipantToken.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/complete-attachment-upload HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "AttachmentIds": [ "string" ],
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttachmentIds

A list of unique identifiers for the attachments.

Type: Array of strings

Array Members: Fixed number of 1 item.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation conflicts with the current state of a service resource associated with the request.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ServiceQuotaExceededException

The number of attachments per contact exceeds the quota.

HTTP Status Code: 402

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface V2
- AWS SDK for .NET V4
- AWS SDK for C++
- AWS SDK for Go v2
- AWS SDK for Java V2

- AWS SDK for JavaScript V3
- AWS SDK for Kotlin
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3

CreateParticipantConnection

Service: Amazon Connect Participant Service

Creates the participant's connection.

For security recommendations, see Amazon Connect Chat security best practices.

For WebRTC security recommendations, see Amazon Connect WebRTC security best practices.

> **Note**
>
> `ParticipantToken` is used for invoking this API instead of `ConnectionToken`.

The participant token is valid for the lifetime of the participant – until they are part of a contact. For WebRTC participants, if they leave or are disconnected for 60 seconds, a new participant needs to be created using the CreateParticipant API.

For `WEBSOCKET` Type:

The response URL for has a connect expiry timeout of 100s. Clients must manually connect to the returned websocket URL and subscribe to the desired topic.

For chat, you need to publish the following on the established websocket connection:

`{"topic":"aws/subscribe","content":{"topics":["aws/chat"]}}`

Upon websocket URL expiry, as specified in the response ConnectionExpiry parameter, clients need to call this API again to obtain a new websocket URL and perform the same steps as before.

The expiry time for the connection token is different than the `ChatDurationInMinutes`. Expiry time for the connection token is 1 day.

For `WEBRTC_CONNECTION` Type:

The response includes connection data required for the client application to join the call using the Amazon Chime SDK client libraries. The WebRTCConnection response contains Meeting and Attendee information needed to establish the media connection.

The attendee join token in WebRTCConnection response is valid for the lifetime of the participant in the call. If a participant leaves or is disconnected for 60 seconds, their participant credentials will no longer be valid, and a new participant will need to be created to rejoin the call.

Message streaming support: This API can also be used together with the StartContactStreaming API to create a participant connection for chat contacts that are not using a websocket. For more information about message streaming, Enable real-time chat message streaming in the *Amazon Connect Administrator Guide*.

Multi-user web, in-app, video calling support:

For WebRTC calls, this API is used in conjunction with the CreateParticipant API to enable multi-party calling. The StartWebRTCContact API creates the initial contact and routes it to an agent, while CreateParticipant adds additional participants to the ongoing call. For more information about multi-party WebRTC calls, see Enable multi-user web, in-app, and video calling in the *Amazon Connect Administrator Guide*.

Feature specifications: For information about feature specifications, such as the allowed number of open websocket connections per participant or maximum number of WebRTC participants, see Feature specifications in the *Amazon Connect Administrator Guide*.

> **Note**
>
> The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/connection HTTP/1.1
X-Amz-Bearer: ParticipantToken
Content-type: application/json

{
   "ConnectParticipant": boolean,
   "Type": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

ParticipantToken

This is a header parameter.

The ParticipantToken as obtained from StartChatContact API response.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ConnectParticipant

Amazon Connect Participant is used to mark the participant as connected for customer participant in message streaming, as well as for agent or manager participant in non-streaming chats.

Type: Boolean

Required: No

Type

Type of connection information required. If you need `CONNECTION_CREDENTIALS` along with marking participant as connected, pass `CONNECTION_CREDENTIALS` in `Type`.

Type: Array of strings

Array Members: Minimum number of 1 item.

Valid Values: `WEBSOCKET | CONNECTION_CREDENTIALS | WEBRTC_CONNECTION`

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "ConnectionCredentials": {
      "ConnectionToken": "string",
      "Expiry": "string"
```

```
    },
    "WebRTCConnection": {
       "Attendee": {
          "AttendeeId": "string",
          "JoinToken": "string"
       },
       "Meeting": {
          "MediaPlacement": {
             "AudioFallbackUrl": "string",
             "AudioHostUrl": "string",
             "EventIngestionUrl": "string",
             "SignalingUrl": "string"
          },
          "MeetingFeatures": {
             "Audio": {
                "EchoReduction": "string"
             }
          },
          "MeetingId": "string"
       }
    },
    "Websocket": {
       "ConnectionExpiry": "string",
       "Url": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

ConnectionCredentials

Creates the participant's connection credentials. The authentication token associated with the participant's connection.

Type: ConnectionCredentials object

WebRTCConnection

Creates the participant's WebRTC connection data required for the client application (mobile application or website) to connect to the call.

Type: WebRTCConnection object

Websocket

Creates the participant's websocket connection.

Type: Websocket object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

DescribeView

Service: Amazon Connect Participant Service

Retrieves the view for the specified view token.

For security recommendations, see Amazon Connect Chat security best practices.

Request Syntax

```
GET /participant/views/ViewToken HTTP/1.1
X-Amz-Bearer: ConnectionToken
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The connection token.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

ViewToken

An encrypted token originating from the interactive message of a ShowView block operation. Represents the desired view.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "View": {
      "Arn": "string",
      "Content": {
         "Actions": [ "string" ],
         "InputSchema": "string",
         "Template": "string"
      },
      "Id": "string",
      "Name": "string",
      "Version": number
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

View

A view resource object. Contains metadata and content necessary to render the view.

Type: View object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ResourceNotFoundException

The resource was not found.

ResourceId

The identifier of the resource.

ResourceType

The type of Amazon Connect resource.

HTTP Status Code: 404

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

DisconnectParticipant

Service: Amazon Connect Participant Service

Disconnects a participant.

For security recommendations, see Amazon Connect Chat security best practices.

> **Note**
>
> ConnectionToken is used for invoking this API instead of ParticipantToken.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/disconnect HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "ClientToken": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

GetAttachment

Service: Amazon Connect Participant Service

Provides a pre-signed URL for download of a completed attachment. This is an asynchronous API for use with active contacts.

For security recommendations, see Amazon Connect Chat security best practices.

Note

- The participant role `CUSTOM_BOT` is not permitted to access attachments customers may upload. An `AccessDeniedException` can indicate that the participant may be a CUSTOM_BOT, and it doesn't have access to attachments.
- `ConnectionToken` is used for invoking this API instead of `ParticipantToken`.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/attachment HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "AttachmentId": "string",
   "UrlExpiryInSeconds": number
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttachmentId

A unique identifier for the attachment.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

UrlExpiryInSeconds

The expiration time of the URL in ISO timestamp. It's specified in ISO 8601 format: yyyy-MM-ddThh:mm:ss.SSSZ. For example, 2019-11-08T02:41:28.172Z.

Type: Integer

Valid Range: Minimum value of 5. Maximum value of 300.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AttachmentSizeInBytes": number,
   "Url": "string",
   "UrlExpiry": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AttachmentSizeInBytes

The size of the attachment in bytes.

Type: Long

Valid Range: Minimum value of 1.

Url

This is the pre-signed URL that can be used for uploading the file to Amazon S3 when used in response to StartAttachmentUpload.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000.

UrlExpiry

The expiration time of the URL in ISO timestamp. It's specified in ISO 8601 format: yyyy-MM-ddThh:mm:ss.SSSZ. For example, 2019-11-08T02:41:28.172Z.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

See Also

GetAuthenticationUrl

Service: Amazon Connect Participant Service

Retrieves the AuthenticationUrl for the current authentication session for the AuthenticateCustomer flow block.

For security recommendations, see Amazon Connect Chat security best practices.

Note

- This API can only be called within one minute of receiving the authenticationInitiated event.
- The current supported channel is chat. This API is not supported for Apple Messages for Business, WhatsApp, or SMS chats.

Note

`ConnectionToken` is used for invoking this API instead of `ParticipantToken`.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/authentication-url HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "RedirectUri": "string",
   "SessionId": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

RedirectUri

The URL where the customer will be redirected after Amazon Cognito authorizes the user.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1024.

Required: Yes

SessionId

The sessionId provided in the authenticationInitiated event.

Type: String

Length Constraints: Fixed length of 36.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AuthenticationUrl": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AuthenticationUrl

The URL where the customer will sign in to the identity provider. This URL contains the authorize endpoint for the Cognito UserPool used in the authentication.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2083.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

See Also

GetTranscript

Service: Amazon Connect Participant Service

Retrieves a transcript of the session, including details about any attachments. For information about accessing past chat contact transcripts for a persistent chat, see Enable persistent chat.

For security recommendations, see Amazon Connect Chat security best practices.

If you have a process that consumes events in the transcript of an chat that has ended, note that chat transcripts contain the following event content types if the event has occurred during the chat session:

- `application/vnd.amazonaws.connect.event.participant.invited`
- `application/vnd.amazonaws.connect.event.participant.joined`
- `application/vnd.amazonaws.connect.event.participant.left`
- `application/vnd.amazonaws.connect.event.chat.ended`
- `application/vnd.amazonaws.connect.event.transfer.succeeded`
- `application/vnd.amazonaws.connect.event.transfer.failed`

> **Note**
>
> ConnectionToken is used for invoking this API instead of `ParticipantToken`.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/transcript HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "ContactId": "string",
   "MaxResults": number,
   "NextToken": "string",
   "ScanDirection": "string",
   "SortOrder": "string",
```

```
   "StartPosition": {
      "AbsoluteTime": "string",
      "Id": "string",
      "MostRecent": number
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ContactId

The contactId from the current contact chain for which transcript is needed.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

MaxResults

The maximum number of results to return in the page. Default: 10.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 100.

Required: No

NextToken

The pagination token. Use the value returned previously in the next subsequent request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: No

ScanDirection

The direction from StartPosition from which to retrieve message. Default: BACKWARD when no StartPosition is provided, FORWARD with StartPosition.

Type: String

Valid Values: `FORWARD | BACKWARD`

Required: No

SortOrder

The sort order for the records. Default: DESCENDING.

Type: String

Valid Values: `DESCENDING | ASCENDING`

Required: No

StartPosition

A filtering option for where to start.

Type: StartPosition object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
   "InitialContactId": "string",
   "NextToken": "string",
   "Transcript": [
      {
         "AbsoluteTime": "string",
         "Attachments": [
            {
               "AttachmentId": "string",
               "AttachmentName": "string",
               "ContentType": "string",
               "Status": "string"
            }
         ],
         "ContactId": "string",
         "Content": "string",
         "ContentType": "string",
         "DisplayName": "string",
         "Id": "string",
         "MessageMetadata": {
            "MessageId": "string",
            "MessageProcessingStatus": "string",
            "Receipts": [
               {
                  "DeliveredTimestamp": "string",
                  "ReadTimestamp": "string",
                  "RecipientParticipantId": "string"
               }
            ]
         },
         "ParticipantId": "string",
         "ParticipantRole": "string",
         "RelatedContactId": "string",
         "Type": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

InitialContactId

The initial contact ID for the contact.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

NextToken

The pagination token. Use the value returned previously in the next subsequent request to retrieve the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Transcript

The list of messages in the session.

Type: Array of Item objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

SendEvent

Service: Amazon Connect Participant Service

> **Note**
>
> The `application/vnd.amazonaws.connect.event.connection.acknowledged` ContentType is no longer maintained since December 31, 2024. This event has been migrated to the CreateParticipantConnection API using the `ConnectParticipant` field.

Sends an event. Message receipts are not supported when there are more than two active participants in the chat. Using the SendEvent API for message receipts when a supervisor is barged-in will result in a conflict exception.

For security recommendations, see Amazon Connect Chat security best practices.

> **Note**
>
> `ConnectionToken` is used for invoking this API instead of `ParticipantToken`.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/event HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "ClientToken": "string",
   "Content": "string",
   "ContentType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Content

The content of the event to be sent (for example, message text). For content related to message receipts, this is supported in the form of a JSON string.

Sample Content: "{\"messageId\":\"11111111-aaaa-bbbb-cccc-EXAMPLE01234\"}"

Type: String

Length Constraints: Minimum length of 1. Maximum length of 16384.

Required: No

ContentType

The content type of the request. Supported types are:

- application/vnd.amazonaws.connect.event.typing
- application/vnd.amazonaws.connect.event.connection.acknowledged (is no longer maintained since December 31, 2024)

- application/vnd.amazonaws.connect.event.message.delivered
- application/vnd.amazonaws.connect.event.message.read

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AbsoluteTime": "string",
   "Id": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AbsoluteTime

The time when the event was sent.

It's specified in ISO 8601 format: yyyy-MM-ddThh:mm:ss.SSSZ. For example, 2019-11-08T02:41:28.172Z.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Id

The ID of the response.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

ConflictException

The requested operation conflicts with the current state of a service resource associated with the request.

HTTP Status Code: 409

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

See Also

SendMessage

Service: Amazon Connect Participant Service

Sends a message.

For security recommendations, see Amazon Connect Chat security best practices.

> **Note**
>
> ConnectionToken is used for invoking this API instead of ParticipantToken.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/message HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "ClientToken": "string",
   "Content": "string",
   "ContentType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Content

The content of the message.

- For `text/plain` and `text/markdown`, the Length Constraints are Minimum of 1, Maximum of 1024.
- For `application/json`, the Length Constraints are Minimum of 1, Maximum of 12000.
- For `application/vnd.amazonaws.connect.message.interactive.response`, the Length Constraints are Minimum of 1, Maximum of 12288.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1024.

Required: Yes

ContentType

The type of the content. Possible types are `text/plain`, `text/markdown`, `application/json`, and `application/vnd.amazonaws.connect.message.interactive.response`.

Supported types on the contact are configured through `SupportedMessagingContentTypes` on StartChatContact and StartOutboundChatContact.

For Apple Messages for Business, SMS, and WhatsApp Business Messaging contacts, only `text/plain` is supported.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AbsoluteTime": "string",
   "Id": "string",
   "MessageMetadata": {
      "MessageProcessingStatus": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AbsoluteTime

The time when the message was sent.

It's specified in ISO 8601 format: yyyy-MM-ddThh:mm:ss.SSSZ. For example, 2019-11-08T02:41:28.172Z.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Id

The ID of the message.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

MessageMetadata

Contains metadata for the message.

Type: MessageProcessingMetadata object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

StartAttachmentUpload

Service: Amazon Connect Participant Service

Provides a pre-signed Amazon S3 URL in response for uploading the file directly to S3.

For security recommendations, see Amazon Connect Chat security best practices.

> **Note**
>
> ConnectionToken is used for invoking this API instead of ParticipantToken.

The Amazon Connect Participant Service APIs do not use Signature Version 4 authentication.

Request Syntax

```
POST /participant/start-attachment-upload HTTP/1.1
X-Amz-Bearer: ConnectionToken
Content-type: application/json

{
   "AttachmentName": "string",
   "AttachmentSizeInBytes": number,
   "ClientToken": "string",
   "ContentType": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

ConnectionToken

The authentication token associated with the participant's connection.

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttachmentName

A case-sensitive name of the attachment being uploaded.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

AttachmentSizeInBytes

The size of the attachment in bytes.

Type: Long

Valid Range: Minimum value of 1.

Required: Yes

ClientToken

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. If not provided, the AWS SDK populates this field. For more information about idempotency, see Making retries safe with idempotent APIs.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 500.

Required: Yes

ContentType

Describes the MIME file type of the attachment. For a list of supported file types, see Feature specifications in the *Amazon Connect Administrator Guide*.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json

{
   "AttachmentId": "string",
   "UploadMetadata": {
      "HeadersToInclude": {
         "string" : "string"
      },
      "Url": "string",
      "UrlExpiry": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AttachmentId

A unique identifier for the attachment.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

UploadMetadata

The headers to be provided while uploading the file to the URL.

Type: UploadMetadata object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

InternalServerException

This exception occurs when there is an internal failure in the Amazon Connect service.

HTTP Status Code: 500

ServiceQuotaExceededException

The number of attachments per contact exceeds the quota.

HTTP Status Code: 402

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 429

ValidationException

The input fails to satisfy the constraints specified by Amazon Connect.

HTTP Status Code: 400

AddProfileKey

Service: Amazon Connect Customer Profiles

Associates a new key value with a specific profile, such as a Contact Record ContactId.

A profile object can have a single unique key and any number of additional keys that can be used to identify the profile that it belongs to.

Request Syntax

```
POST /domains/DomainName/profiles/keys HTTP/1.1
Content-type: application/json

{
   "KeyName": "string",
   "ProfileId": "string",
   "Values": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

KeyName

A searchable identifier of a customer profile. The predefined keys you can use include: _account, _profileId, _assetId, _caseId, _orderId, _fullName, _phone, _email, _ctrContactId, _marketoLeadId, _salesforceAccountId, _salesforceContactId, _salesforceAssetId,

_zendeskUserId, _zendeskExternalId, _zendeskTicketId, _serviceNowSystemId, _serviceNowIncidentId, _segmentUserId, _shopifyCustomerId, _shopifyOrderId.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

ProfileId

The unique identifier of a customer profile.

Type: String

Pattern: `[a-f0-9]{32}`

Required: Yes

Values

A list of key values.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "KeyName": "string",
   "Values": [ "string" ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

KeyName

A searchable identifier of a customer profile.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Values

A list of key values.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 255.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

BadRequestException

The input you provided is invalid.

HTTP Status Code: 400

InternalServerException

An internal service error occurred.

HTTP Status Code: 500

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ThrottlingException

You exceeded the maximum number of requests.

HTTP Status Code: 429

Examples

Example

This example illustrates one usage of AddProfileKey.

Sample Request

```
POST /v1/domains/ExampleDomainName/profiles/keys

Content-type: application/json
{
  "ProfileId": "3991a7d959d248bba82546b2dEXAMPLE",
  "KeyName": "_ctrContactId",
  "Values": ["valueOfTheContactId"]
}
```

Sample Response

```
Content-type: application/json
{
   "KeyName": "_ctrContactId",
   "Values": ["valueOfTheContactId"]
}
```

BatchGetCalculatedAttributeForProfile

Service: Amazon Connect Customer Profiles

Fetch the possible attribute values given the attribute name.

Request Syntax

```
POST /domains/DomainName/calculated-attributes/CalculatedAttributeName/batch-get-for-profiles HTTP/1.1
Content-type: application/json

{
   "ConditionOverrides": {
      "Range": {
         "End": number,
         "Start": number,
         "Unit": "string"
      }
   },
   "ProfileIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

CalculatedAttributeName

The unique name of the calculated attribute.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-]*$`

Required: Yes

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ConditionOverrides

Overrides the condition block within the original calculated attribute definition.

Type: ConditionOverrides object

Required: No

ProfileIds

List of unique identifiers for customer profiles to retrieve.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Pattern: `[a-f0-9]{32}`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "CalculatedAttributeValues": [
      {
         "CalculatedAttributeName": "string",
         "DisplayName": "string",
         "IsDataPartial": "string",
         "LastObjectTimestamp": number,
         "ProfileId": "string",
         "Value": "string"
      }
   ],
```

```
   "ConditionOverrides": {
      "Range": {
         "End": number,
         "Start": number,
         "Unit": "string"
      }
   },
   "Errors": [
      {
         "Code": "string",
         "Message": "string",
         "ProfileId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

CalculatedAttributeValues

List of calculated attribute values retrieved.

Type: Array of CalculatedAttributeValue objects

ConditionOverrides

Overrides the condition block within the original calculated attribute definition.

Type: ConditionOverrides object

Errors

List of errors for calculated attribute values that could not be retrieved.

Type: Array of BatchGetCalculatedAttributeForProfileError objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

BadRequestException

The input you provided is invalid.

HTTP Status Code: 400

InternalServerException

An internal service error occurred.

HTTP Status Code: 500

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ThrottlingException

You exceeded the maximum number of requests.

HTTP Status Code: 429

BatchGetProfile

Service: Amazon Connect Customer Profiles

Get a batch of profiles.

Request Syntax

```
POST /domains/DomainName/batch-get-profiles HTTP/1.1
Content-type: application/json

{
   "ProfileIds": [ "string" ]
}
```

URI Request Parameters

The request uses the following URI parameters.

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

ProfileIds

List of unique identifiers for customer profiles to retrieve.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 20 items.

Pattern: `[a-f0-9]{32}`

Required: Yes

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "Errors": [
      {
         "Code": "string",
         "Message": "string",
         "ProfileId": "string"
      }
   ],
   "Profiles": [
      {
         "AccountNumber": "string",
         "AdditionalInformation": "string",
         "Address": {
            "Address1": "string",
            "Address2": "string",

CreateCalculatedAttributeDefinition

Service: Amazon Connect Customer Profiles

Creates a new calculated attribute definition. After creation, new object data ingested into Customer Profiles will be included in the calculated attribute, which can be retrieved for a profile using the GetCalculatedAttributeForProfile API. Defining a calculated attribute makes it available for all profiles within a domain. Each calculated attribute can only reference one `ObjectType` and at most, two fields from that `ObjectType`.

Request Syntax

```
POST /domains/DomainName/calculated-attributes/CalculatedAttributeName HTTP/1.1
Content-type: application/json

{
   "AttributeDetails": {
      "Attributes": [
         {
            "Name": "string"
         }
      ],
      "Expression": "string"
   },
   "Conditions": {
      "ObjectCount": number,
      "Range": {
         "TimestampFormat": "string",
         "TimestampSource": "string",
         "Unit": "string",
         "Value": number,
         "ValueRange": {
            "End": number,
            "Start": number
         }
      },
      "Threshold": {
         "Operator": "string",
         "Value": "string"
      }
   },
   "Description": "string",
   "DisplayName": "string",
```

```
   "Filter": {
      "Groups": [
         {
            "Dimensions": [
               {
                  "Attributes": {
                     "string" : {
                        "DimensionType": "string",
                        "Values": [ "string" ]
                     }
                  }
               }
            ],
            "Type": "string"
         }
      ],
      "Include": "string"
   },
   "Statistic": "string",
   "Tags": {
      "string" : "string"
   },
   "UseHistoricalData": boolean
}
```

URI Request Parameters

The request uses the following URI parameters.

CalculatedAttributeName

The unique name of the calculated attribute.

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-]*$`

Required: Yes

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: ^[a-zA-Z0-9_-]+$

Required: Yes

Request Body

The request accepts the following data in JSON format.

AttributeDetails

Mathematical expression and a list of attribute items specified in that expression.

Type: AttributeDetails object

Required: Yes

Conditions

The conditions including range, object count, and threshold for the calculated attribute.

Type: Conditions object

Required: No

Description

The description of the calculated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: No

DisplayName

The display name of the calculated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: ^[a-zA-Z_][a-zA-Z_0-9-\s]*$

Required: No

Filter

Defines how to filter incoming objects to include part of the Calculated Attribute.

Type: Filter object

Required: No

Statistic

The aggregation operation to perform for the calculated attribute.

Type: String

Valid Values: `FIRST_OCCURRENCE | LAST_OCCURRENCE | COUNT | SUM | MINIMUM | MAXIMUM | AVERAGE | MAX_OCCURRENCE`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

UseHistoricalData

Whether historical data ingested before the Calculated Attribute was created should be included in calculations.

Type: Boolean

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "AttributeDetails": {
      "Attributes": [
         {
            "Name": "string"
         }
      ],
      "Expression": "string"
   },
   "CalculatedAttributeName": "string",
   "Conditions": {
      "ObjectCount": number,
      "Range": {
         "TimestampFormat": "string",
         "TimestampSource": "string",
         "Unit": "string",
         "Value": number,
         "ValueRange": {
            "End": number,
            "Start": number
         }
      },
      "Threshold": {
         "Operator": "string",
         "Value": "string"
      }
   },
   "CreatedAt": number,
   "Description": "string",
   "DisplayName": "string",
   "Filter": {
      "Groups": [
         {
            "Dimensions": [
               {
                  "Attributes": {
```

```
                    "string" : {
                       "DimensionType": "string",
                       "Values": [ "string" ]
                    }
                 }
              }
           ],
           "Type": "string"
        }
     ],
     "Include": "string"
  },
  "LastUpdatedAt": number,
  "Readiness": {
     "Message": "string",
     "ProgressPercentage": number
  },
  "Statistic": "string",
  "Status": "string",
  "Tags": {
     "string" : "string"
  },
  "UseHistoricalData": boolean
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AttributeDetails

Mathematical expression and a list of attribute items specified in that expression.

Type: AttributeDetails object

CalculatedAttributeName

The unique name of the calculated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-]*$`

Conditions

The conditions including range, object count, and threshold for the calculated attribute.

Type: Conditions object

CreatedAt

The timestamp of when the calculated attribute definition was created.

Type: Timestamp

Description

The description of the calculated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

DisplayName

The display name of the calculated attribute.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-\s]*$`

Filter

The filter that was used as part of the request.

Type: Filter object

LastUpdatedAt

The timestamp of when the calculated attribute definition was most recently edited.

Type: Timestamp

Readiness

Information indicating if the Calculated Attribute is ready for use by confirming all historical data has been processed and reflected.

Type: Readiness object

Statistic

The aggregation operation to perform for the calculated attribute.

Type: String

Valid Values: `FIRST_OCCURRENCE | LAST_OCCURRENCE | COUNT | SUM | MINIMUM | MAXIMUM | AVERAGE | MAX_OCCURRENCE`

Status

Status of the Calculated Attribute creation (whether all historical data has been indexed.)

Type: String

Valid Values: `PREPARING | IN_PROGRESS | COMPLETED | FAILED`

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

UseHistoricalData

Whether historical data ingested before the Calculated Attribute was created should be included in calculations.

Type: Boolean

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

BadRequestException

The input you provided is invalid.

HTTP Status Code: 400

InternalServerException

An internal service error occurred.

HTTP Status Code: 500

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ThrottlingException

You exceeded the maximum number of requests.

HTTP Status Code: 429

CreateDomain

Service: Amazon Connect Customer Profiles

Creates a domain, which is a container for all customer data, such as customer profile attributes, object types, profile keys, and encryption keys. You can create multiple domains, and each domain can have multiple third-party integrations.

Each Amazon Connect instance can be associated with only one domain. Multiple Amazon Connect instances can be associated with one domain.

Use this API or UpdateDomain to enable identity resolution: set `Matching` to true.

To prevent cross-service impersonation when you call this API, see Cross-service confused deputy prevention for sample policies that you should apply.

> **Note**
>
> It is not possible to associate a Customer Profiles domain with an Amazon Connect Instance directly from the API. If you would like to create a domain and associate a Customer Profiles domain, use the Amazon Connect admin website. For more information, see Enable Customer Profiles.
> Each Amazon Connect instance can be associated with only one domain. Multiple Amazon Connect instances can be associated with one domain.

Request Syntax

```
POST /domains/DomainName HTTP/1.1
Content-type: application/json

{
   "DataStore": {
      "Enabled": boolean
   },
   "DeadLetterQueueUrl": "string",
   "DefaultEncryptionKey": "string",
   "DefaultExpirationDays": number,
   "Matching": {
      "AutoMerging": {
         "ConflictResolution": {

```

URI Request Parameters

The request uses the following URI parameters.

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

DataStore

Set to true to enabled data store for this domain.

Type: DataStoreRequest object

Required: No

DeadLetterQueueUrl

The URL of the SQS dead letter queue, which is used for reporting errors associated with ingesting data from third party applications. You must set up a policy on the DeadLetterQueue for the SendMessage operation to enable Amazon Connect Customer Profiles to send messages to the DeadLetterQueue.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

DefaultEncryptionKey

The default encryption key, which is an AWS managed key, is used when no specific type of encryption key is specified. It is used to encrypt all data before it is placed in permanent or semi-permanent storage.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

Required: No

DefaultExpirationDays

The default number of days until the data within the domain expires.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1098.

Required: Yes

Matching

The process of matching duplicate profiles. If `Matching` = `true`, Amazon Connect Customer Profiles starts a weekly batch process called Identity Resolution Job. If you do not specify a date and time for Identity Resolution Job to run, by default it runs every Saturday at 12AM UTC to detect duplicate profiles in your domains.

After the Identity Resolution Job completes, use the GetMatches API to return and review the results. Or, if you have configured `ExportingConfig` in the `MatchingRequest`, you can download the results from S3.

Type: MatchingRequest object

Required: No

RuleBasedMatching

The process of matching duplicate profiles using the Rule-Based matching. If `RuleBasedMatching` = true, Amazon Connect Customer Profiles will start to match and merge your profiles according to your configuration in the `RuleBasedMatchingRequest`. You can

use the `ListRuleBasedMatches` and `GetSimilarProfiles` API to return and review the results. Also, if you have configured `ExportingConfig` in the `RuleBasedMatchingRequest`, you can download the results from S3.

Type: RuleBasedMatchingRequest object

Required: No

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "CreatedAt": number,
   "DataStore": {
      "Enabled": boolean,
      "Readiness": {
         "Message": "string",

      },
      "MatchingRules": [
```

```
            {
               "Rule": [ "string" ]
            }
         ],
         "MaxAllowedRuleLevelForMatching": number,
         "MaxAllowedRuleLevelForMerging": number,
         "Status": "string"
      },
      "Tags": {
         "string" : "string"
      }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

CreatedAt

The timestamp of when the domain was created.

Type: Timestamp

DataStore

The data store.

Type: DataStoreResponse object

DeadLetterQueueUrl

The URL of the SQS dead letter queue, which is used for reporting errors associated with ingesting data from third party applications.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

DefaultEncryptionKey

The default encryption key, which is an AWS managed key, is used when no specific type of encryption key is specified. It is used to encrypt all data before it is placed in permanent or semi-permanent storage.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 255.

DefaultExpirationDays

The default number of days until the data within the domain expires.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1098.

DomainName

The unique name of the domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

LastUpdatedAt

The timestamp of when the domain was most recently edited.

Type: Timestamp

Matching

The process of matching duplicate profiles. If `Matching` = `true`, Amazon Connect Customer Profiles starts a weekly batch process called Identity Resolution Job. If you do not specify a date and time for Identity Resolution Job to run, by default it runs every Saturday at 12AM UTC to detect duplicate profiles in your domains.

After the Identity Resolution Job completes, use the GetMatches API to return and review the results. Or, if you have configured `ExportingConfig` in the `MatchingRequest`, you can download the results from S3.

Type: MatchingResponse object

RuleBasedMatching

The process of matching duplicate profiles using the Rule-Based matching. If `RuleBasedMatching` = true, Amazon Connect Customer Profiles will start to match and merge your profiles according to your configuration in the `RuleBasedMatchingRequest`. You can use the `ListRuleBasedMatches` and `GetSimilarProfiles` API to return and review the

results. Also, if you have configured `ExportingConfig` in the `RuleBasedMatchingRequest`, you can download the results from S3.

Type: RuleBasedMatchingResponse object

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

BadRequestException

The input you provided is invalid.

HTTP Status Code: 400

InternalServerException

An internal service error occurred.

HTTP Status Code: 500

ResourceNotFoundException

The requested resource does not exist, or access was denied.

HTTP Status Code: 404

ThrottlingException

You exceeded the maximum number of requests.

HTTP Status Code: 429

Examples

Example

This example illustrates one usage of CreateDomain.

Sample Request

```
POST /v1/domains/ExampleDomainName
Content-type: application/json
{
   "DeadLetterQueueUrl": "arn:aws:sqs:us-east-1:123456789012:DLQName",
   "DefaultEncryptionKey": "arn:aws:kms:us-east-1:123456789012:key/1988472d-6b77-4bb6-
ae39-efce5EXAMPLE",
   "DefaultExpirationDays": 1098,
   "DomainName":"ExampleDomainName"
}
```

Sample Response

```
Content-type: application/json
{
   "DeadLetterQueueUrl": "arn:aws:sqs:us-east-1:123456789012:DLQName",
   "CreatedAt": 1479249799770,
   "DefaultEncryptionKey":"arn:aws:kms:us-east-1:123456789012:key/1988472d-6b77-4bb6-
ae39-efce5EXAMPLE",
   "DefaultExpirationDays": 1098,
   "LastUpdatedAt":1479249799770,
   "DomainName": "ExampleDomainName"
}
```

CreateDomainLayout

Service: Amazon Connect Customer Profiles

Creates the layout to view data for a specific domain. This API can only be invoked from the Amazon Connect admin website.

Request Syntax

```
POST /domains/DomainName/layouts/LayoutDefinitionName HTTP/1.1
Content-type: application/json

{
   "Description": "string",
   "DisplayName": "string",
   "IsDefault": boolean,
   "Layout": "string",
   "LayoutType": "string",
   "Tags": {
      "string" : "string"
   }
}
```

URI Request Parameters

The request uses the following URI parameters.

DomainName

The unique name of the domain.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

LayoutDefinitionName

The unique name of the layout.

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

Description

The description of the layout

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Required: Yes

DisplayName

The display name of the layout

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-\s]*$`

Required: Yes

IsDefault

If set to true for a layout, this layout will be used by default to view data. If set to false, then the layout will not be used by default, but it can be used to view data by explicitly selecting it in the console.

Type: Boolean

Required: No

Layout

A customizable layout that can be used to view data under a Customer Profiles domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000000.

Required: Yes

LayoutType

The type of layout that can be used to view data under a Customer Profiles domain.

Type: String

Valid Values: `PROFILE_EXPLORER`

Required: Yes

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "CreatedAt": number,
   "Description": "string",
   "DisplayName": "string",
   "IsDefault": boolean,
   "LastUpdatedAt": number,
   "Layout": "string",
   "LayoutDefinitionName": "string",
   "LayoutType": "string",
   "Tags": {
      "string" : "string"
```

```
    },
    "Version": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

CreatedAt

The timestamp of when the layout was created.

Type: Timestamp

Description

The description of the layout

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

DisplayName

The display name of the layout

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Pattern: `^[a-zA-Z_][a-zA-Z_0-9-\s]*$`

IsDefault

If set to true for a layout, this layout will be used by default to view data. If set to false, then the layout will not be used by default, but it can be used to view data by explicitly selecting it in the console.

Type: Boolean

LastUpdatedAt

The timestamp of when the layout was most recently updated.

Type: Timestamp

Layout

A customizable layout that can be used to view data under Customer Profiles domain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2000000.

LayoutDefinitionName

The unique name of the layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: `^[a-zA-Z0-9_-]+$`

LayoutType

The type of layout that can be used to view data under customer profiles domain.

Type: String

Valid Values: `PROFILE_EXPLORER`

Tags

The tags used to organize, track, or control access for this resource.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+-=._:/]+$`

Value Length Constraints: Maximum length of 256.

Version

The version used to create layout.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 403

BadRequestException

The input you provided is invalid.

HTTP Status Code: 400
